Department of Computer Science and Engineering

Vision

• To acknowledge quality education and instill high patterns of discipline making the students technologically superior and ethically strong which involves the improvement in the quality of life in human race.

Mission

- To achieve and impart holistic technical education using the best of infrastructure, outstanding technical and teaching expertise to establish the students in to competent and confident engineers.
- Evolving the center of excellence through creative and innovative teaching learning practices for promoting academic achievement to produce internationally accepted competitive and world class professionals.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

PEO1 - ANALYTICAL SKILLS

• To facilitate the graduates with the ability to visualize, gather information, articulate, analyze, solve complex problems, and make decisions. These are essential to address the challenges of complex and computation intensive problems increasing their productivity.

PEO2 - TECHNICAL SKILLS

 To facilitate the graduates with the technical skills that prepare them for immediate employment and pursue certification providing a deeper understanding of the technology in advanced areas of computer science and related fields, thus encouraging to pursue higher education and research based on their interest.

PEO3 - SOFT SKILLS

 To facilitate the graduates with the soft skills that include fulfilling the mission, setting goals, showing self-confidence by communicating effectively, having a positive attitude, get involved in team-work, being a leader, managing their career and their life.

PEO4 - PROFESSIONAL ETHICS

 To facilitate the graduates with the knowledge of professional and ethical responsibilities by paying attention to grooming, being conservative with style, following dress codes, safety codes, and adapting themselves to technological advancements.

PROGRAM SPECIFIC OUTCOMES (PSOs)

After the completion of the course, B. Tech Computer Science and Engineering, the graduates will have the following Program Specific Outcomes:

- 1. Fundamentals and critical knowledge of the Computer System:- Able to understand the working principles of the computer System and its components, Apply the knowledge to build, assess, and analyze the software and hardwareaspects of it.
- 2. The comprehensive and Applicative knowledge of Software Development: Comprehensive skills of Programming Languages, Software process models, methodologies, and able to plan, develop, test, analyze, and manage the software and hardware intensive systems in heterogeneous platforms individually or working in teams.
- 3. Applications of Computing Domain & Research: Able to use the professional, managerial, interdisciplinary skill set, and domain specific tools in development processes, identify the research gaps, and provide innovative solutions to them.

PROGRAM OUTCOMES (POs)

Engineering Graduates will be able to:

- 1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- 2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- Design / development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complexengineering activities with an understanding of the limitations.
- 6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. **Ethics:** Apply ethical principles and commit to professional ethics andresponsibilities and norms of the engineering practice.
- 9. **Individual and team work:** Function effectively as an individual, and as a memberor leader in diverse teams, and in multidisciplinary settings.
- 10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. **Project management and finance:** Demonstrate knowledge and understanding of theengineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. **Life- long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological chan

MALLA REDDY COLLEGE OF ENGINEERING & TECHNOLOGY Maisammaguda, Dhulapally Post, Via Hakimpet, Secunderabad – 500100

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

GENERAL LABORATORY INSTRUCTIONS

- 1. Students are advised to come to the laboratory at least 5 minutes before (to the starting time), those who come after 5 minutes will not be allowed into the lab.
- 2. Plan your task properly much before to the commencement, come prepared to the lab with the synopsis / program/ experiment details.
- 3. Student should enter into the laboratory with:
- a Laboratory observation notes with all the details (Problem statement, Aim, Algorithm, Procedure, Program, Expected Output, etc.,) filled in for the lab session.
- b. Laboratory Record updated up to the last session experiments and other utensils (if any) needed in the lab.
- c. Proper Dress code and Identity card.
- d. Sign in the laboratory login register, write the TIME-IN, and occupy the computer system allottedto you by the faculty.
- 4. Execute your task in the laboratory, and record the results / output in the lab observation note book, and get certified by the concerned faculty.
- 5. All the students should be polite and cooperative with the laboratory staff, must maintain the discipline and decency in the laboratory.
- 6. Computer labs are established with sophisticated and high-end branded systems, which should be utilized properly.
- 7. Students / Faculty must keep their mobile phones in SWITCHED OFF mode during the lab sessions. Misuse of the equipment, misbehaviors with the staff and systems etc., will attract severe punishment.
- 8. Students must take the permission of the faculty in case of any urgency to go out; if anybody found loitering outside the lab / class without permission during working hours will be treated seriously and punished appropriately.
- 9. Students should LOG OFF/ SHUT DOWN the computer system before he/she leaves the lab after completing the task (experiment) in all aspects. He/she must ensure the system / seat is kept properly.

HEAD OF THE DEPARTMENT

PRINCIPAL

1. Lab Objectives:

- ➤ Learning basic concepts of Python through illustrative examples and smallexercises
- ➤ To prepare students to become Familiarity with the Python programming inAI environment.
- To provide student with an academic environment aware of various AIAlgorithms.
- ➤ To train Students with python programming as to comprehend, analyze, design and create AI platforms and solutions for the real life problems.
- > To understand data structure concepts in python

2. Lab Outcomes:

Upon completion of the course, students will be able to

- ➤ Apply various AI search algorithms (uninformed, informed, heuristic, constraint satisfaction,)
- ➤ Understand the fundamentals of knowledge representation, inference.
- ➤ Understand the fundamentals of theorem proving using AI tools.
- Demonstrate working knowledge of reasoning in the presence of incompleteand/or uncertain information
- The students are able to apply various fundamentals of data structure using python.

3. Introduction about lab Minimum

System requirements:

- Processors: Intel Atom® processor or Intel® CoreTM i3 processor.
- Disk space: 1 GB.
- Operating systems: Windows* 7 or later, macOS, and Linux.
- **Python*** versions: 2.7.X, 3.6.X.,3.8.X

About lab:

Python is a general purpose, high-level programming language; other high-level languages you might have heard of C++, PHP, Java and Python. Virtually all modern programming languages make us of an Integrated Development Environment (IDE), which allows the creation, editing, testing, and saving of programs and modules. In Python, the IDE is called IDLE (like many items in the language, this is a reference to the British comedy group Monty Python, and in this case, one of its members, Eric Idle).

Many modern languages use both processes. They are first compiled into a lower-level language, called byte code, and then interpreted by a program called avirtual machine. Python uses both processes, but because of the way programmers interact with it, it is usuallyconsidered an interpreted language.

Practical aspects are the key to understanding and conceptual visualization of Theoretical aspects covered in the books. Also, this course is designed toreview the concepts of Data Structure, studied in previous semester and implement the various algorithms related to different data structures.

4. Guidelines to students

A. Standard operating procedure

- a) Explanation on today's experiment by the concerned faculty using PPT covering the following aspects:
- 1) Name of the experiment
- 2) Aim
- b) Writing the python programs by the students
- c) Commands for executing programs

Writing of the experiment in the Observation Book

The students will write the today's experiment in the Observation book as per thefollowing format:

- a) Name of the experiment
- b) Aim
- c) Writing the program
- d) Viva-Voce Questions and Answers
- e) Errors observed (if any) during compilation/execution
- f) Signature of the Faculty

B. Guide Lines to Students in Lab

- > Disciplinary to be maintained by the students in the Lab
- > Students are required to carry their lab observation book and record book withcompleted experiments while entering the lab.
- > Students must use the equipment with care. Any damage is caused student ispunishable
- > Students are not allowed to use their cell phones/pen drives/ CDs in labs.
- > Students need to be maintain proper dress code along with ID Card
- > Students are supposed to occupy the computers allotted to them and are not supposed to talk or make noise in the lab. Students, after completion of each experiment they need to be updated in observation notes and same to be updated in the record.
- ➤ Lab records need to be submitted after completion of experiment and get it corrected with the concerned lab faculty.
- ➤ If a student is absent for any lab, they need to be completed the same experiment in the free time before attending next lab.

Instructions to maintain the record

- ➤ Before start of the first lab they have to buy the record and bring the record to the lab.
- Regularly (Weekly) update the record after completion of the experiment and get it corrected with concerned lab in-charge for continuous evaluation.
- ➤ In case the record is lost inform the same day to the faculty in charge and getthe new record within 2 days the record has to be submitted and get it corrected by the faculty.
- ➤ If record is not submitted in time or record is not written properly, the evaluation marks (5M) will be deducted.

C. General laboratory instructions

- 1. Students are advised to come to the laboratory at least 5 minutes before (to the starting time), those who come after 5 minutes will not be allowed into the lab.
- 2. Plan your task properly much before to the commencement, come prepared to the lab with the synopsis / program / experiment details.
- 3. Student should enter into the laboratory with:
- a. Laboratory observation notes with all the details (Problem statement, Aim, Algorithm, Procedure, Program, Expected Output, etc.,) filled in for the lab session.
- b. Laboratory Record updated up to the last session experiments and other utensils (if any) needed in the lab. c. Proper Dress code and Identity card.
- 4. Sign in the laboratory login register, write the TIME-IN, and occupy the computer system allotted to you by the faculty.
- 5. Execute your task in the laboratory, and record the results / output in the lab observation note book, and get certified by the concerned faculty.
- 6. All the students should be polite and cooperative with the laboratory staff, must maintain the discipline and decency in the laboratory.
- 7. Computer labs are established with sophisticated and high-end branded systems, which should be utilized properly.
- 8. Students / Faculty must keep their mobile phones in SWITCHED OFF mode during the lab sessions. Misuse of the equipment, misbehaviors with the staff and systems etc., will attract severe punishment.
- 9. Students must take the permission of the faculty in case of any urgency to go out; if anybody found loitering outside the lab / class without permission during working hours will be treated seriously and punished appropriately.
- 10. Students should LOG OFF/ SHUT DOWN the computer system before he/she leaves the lab after completing the task (experiment) in all aspects. He/she must ensure the system / seat is kept properly.

INDEX

Week- No	List of Programs	Pg Nos.
1	a) Write a program to print the multiplication table for the given	1-5
	number?	
	b) Write a program to find factorial of a number	
	c) Write a program to check whether the given number is prime	
	or not?	
2	a) Write program to implement Simple Calculator program?	6-12
2	b) Write a program to generate Calendar for the given monthand	
	year? c) Write a program to Illustrate Different Set Operations?	
	c) write a program to mustrate Different Set Operations?	12 17
3	Write a program to implement simple Chat bot?	13-17
3		
	a) Write a program to remove punctuations from the given	18-21
4	string?	-
	b) Write a program to sort the sentence in alphabetical	
	order?	
	Write a program to Implement of Towers of Hanoi Problem.	22-23
5	where a brokening of toward of transcription	
	W' D (II) (D NIE) (C I	24-26
6	Write a Program to Implement Breadth First Search.	
		27.20
7	Write a Program to Implement Depth First Search.	27-30
/		
	Write a program to implement Hill Climbing Algorithm	31-34
8	write a program to imprement this entire ingrition	
		35-38
9	Write a program to implement A* Algorithm.	
10	Write a program to implement Tic-Tac-Toe game.	39-43
10	The rate of Same.	
		44-48
1.1	Write a program to implement Water Jug Problem?	44-4 0
11		

PROGRAM-1(A)

1A) Aim: Write a program to print the multiplication table for the given number?

Program:

Python program to find the multiplication table (from 1 to 10) of a number input by the user # take input from the user

```
num = int(input("Display multiplication table of? "))
```

use for loop to iterate 10 times

```
for i in range(1,11):
print(num,'x',i,'=',num*i)
```

Output:

Display multiplication table of? 5

 $5 \times 1 = 5$

 $5 \times 2 = 10$

 $5 \times 3 = 15$

 $5 \times 4 = 20$

 $5 \times 5 = 25$

 $5 \times 6 = 30$

 $5 \times 7 = 35$

 $5 \times 8 = 40$

 $5 \times 9 = 45$

 $5 \times 10 = 50$

PROGRAM-1(B)

1B) **Aim:** Write a program to find factorial of the given number?

Program:

```
def recur_factorial(n):
    if n == 1:
        return n
    else:
        return n*recur_factorial(n-1)
num = int(input("Enter a number: "))
# check is the number is negative
if num < 0:
    print("Sorry, factorial does not exist for negative numbers")
elif num == 0:
    print("The factorial of 0 is 1")
else:
    print("The factorial of",num,"is",recur_factorial(num))</pre>
```

Output:

Enter a number: 5

The factorial of 5 is 120

PROGRAM-1(C)

1C) Aim: Write a program to check whether the given number is prime or not?

Program:

```
# Python program to check if the input number is prime or not
num = int(input("Enter a number: "))
# prime numbers are greater than 1
if num > 1:
    rem=1
for i in range(2,num):
    rem=num%i
    if rem == 0:
        break
if rem == 0:
    print(num, "is not a prime number")
else:
```

Output:

Enter a number: 5
5 is a prime number

print(num,"is a prime number")

Viva Questions:

- 1. What are called as flow control statements in python?
- 2. Define and list out python iteration statements with syntax?
- 3. Differentiate between built in and user-define functions?

Artificial Intelligence Lab	A.Y: 2023-24

DEPARTMENT OF CSE	Page 5

```
PROGRAM-2(A)
2A)Aim: Write a program to implement Simple Calculator program?
Program:
# Program make a simple calculator that can add, subtract, multiply and divide
using functions
 # define functions
def add(x, y):
 """This function adds two numbers"""
    return x + y
 def subtract(x, y):
  ""This function subtracts two numbers"""
     return x - y
 def multiply(x, y):
 """This function multiplies two numbers"""
     return x * y
 def divide(x, y):
 """This function divides two numbers"""
     return x / y
 # take input from the user
print("Select operation.")
print("1.Add")
print("2.Subtract")
print("3.Multiply")
```

```
print("4.Divide")
choice = input("Enter choice(1/2/3/4):")
num1 = int(input("Enter first number: "))
num2 = int(input("Enter second number: "))
if choice == '1':
     print(num1,"+",num2,"=", add(num1,num2))
 elif choice == '2':
     print(num1,"-",num2,"=", subtract(num1,num2))
 elif choice == '3':
      print(num1,"*",num2,"=", multiply(num1,num2))
 elif choice == '4':
      print(num1,"/",num2,"=", divide(num1,num2))
 else:
     print("Invalid input")
Output:
Select operation.
1.Add
2.Subtract
3. Multiply
4.Divide
Enter choice (1/2/3/4):1
Enter first number: 21
Enter second number: 22
21 + 22 = 43
```

PROGRAM-2(B)

2B) Aim: Write a program to generate Calendar for the given month and year?

Program:

```
# Python program to display calendar of given month of the year
# import module
import calendar
yy = 2014
mm = 11
# To ask month and year from the user# Python program to display calendar of given
month of the year
# import module
import calendar
yy = 2014
mm = 11
# To ask month and year from the user
# yy = int(input("Enter year: "))
# mm = int(input("Enter month: "))
# display the calendar
print(calendar.month(yy, mm))
# yy = int(input("Enter year: "))
# mm = int(input("Enter month: "))
# display the calendar
print(calendar.month(yy, mm))
```

Output:

November 2014

Mo Tu We Th Fr Sa Su

1 2

3 4 5 6 7 8 9

10 11 12 13 14 15 16

17 18 19 20 21 22 23

24 25 26 27 28 29 30

Signature Of Faculty

PROGRAM-2(C)

2C)Aim: Write a program to Illustrate Different Set Operations?

Program:

```
# Program to perform different set operations like in mathematics # define three sets

E = {0, 2, 4, 6, 8};
N = {1, 2, 3, 4, 5};
# set union
print("Union of E and N is",E | N)
# set intersection
print("Intersection of E and N is",E & N)

# set difference
print("Difference of E and N is",E - N)

# set symmetric difference
print("Symmetric difference of E and N is",E ^ N)

Output:

Union of E and N is {0, 1, 2, 3, 4, 5, 6, 8}
Intersection of E and N is {2, 4}
```

Viva Questions:

1. Define function with syntax?

Difference of E and N is {0, 8, 6}

Symmetric difference of E and N is {0, 1, 3, 5, 6, 8}

- 2. Define module? Differentiate between built-in and user define modules?
- 3. Write the syntax for filter, map, reduce functions?

PROGRAM-3

3) **Aim:** Write a program to implement simple Chat bot? **Program:** print("Simple Question and Answering Program") print(" You may ask any one of these questions") print("Hi") print("How are you?") print("Are you working?") print("What is your name?") print("what did you do yesterday?") print("Quit") while True: question = input("Enter one question from above list:") question = question.lower() if question in ['hi']: print("Hello") elif question in ['how are you?','how do you do?']: print("I am fine") elif question in ['are you working?','are you doing any job?']: print("yes. I'am working in MRCET") elif question in ['what is your name?']: print("My name is Emilia") name=input("Enter your name?") print("Nice name and Nice meeting you",name) elif question in ['what did you do yesterday?']: print("I saw Bahubali 5 times") elif question in ['quit']: break else: print("I don't understand what you said") **Output:** Simple Question and Answering Program You may ask any one of these questions Hi

How are you?

Artificial Intelligence Lab

A.Y: 2023-24

Are you working?

What is your name?

what did you do yesterday?

Quit

Enter one question from above list:hi

Hello

Enter one question from above list:how are you?

I am fine

Enter one question from above list:are you working?

yes. I'am working in MRCET

Enter one question from above list:what is your name?

My name is Emilia

Enter your name?sachin

Nice name and Nice meeting you sachin

Enter one question from above list:quit

- 2. What is a chatbot?
- 3. What languages and technologies should a chatbot developer be to build chatbots?

Artificial Intelligence Lab	A.Y: 2023-24

PROGRAM-4(A)

Aim:

4(A).Write a program to remove punctuations from the given string?

Program:

```
# define punctuation
punctuations = ""!()-[]{};:""\,<>./?@#$%^&*_~""
my_str = "Hello!!!, he said ---and went."
# To take input from the user
# my_str = input("Enter a string: ")
# remove punctuation from the string
no_punct = ""
for char in my_str:
    if char not in punctuations:
        no_punct = no_punct + char
# display the unpunctuated string
print(no_punct)
```

Output:

Hello he said and went

PROGRAM-4(B)

Aim: 4(B). Write a program to sort the sentence in alphabetical order?

Program:

```
# Program to sort alphabetically the words form a string provided by the user
# change this value for a different result
my_str = "Hello this Is an Example With cased letters"
# uncomment to take input from the user
#my_str = input("Enter a string: ")
# breakdown the string into a list of words
words = my_str.split()
#print(words)
# sort the list
words.sort()
# display the sorted words
print("The sorted words are:")
for word in words:
   print(word)
Output:
The sorted words are:
Example
Hello
Is
With
an
cased
```

letters

this

Artificial Intelligence Lab

Viva Questions:

- 1. List out String functions in Python?
- 2. List out the methods of list?
- 3. What is list indexing and slicing with an example?

Signature Of Faculty

PROGRAM-5

Aim: Write a Program to Implement of Towers of Hanoi Problem.

Program:

```
# Recursive Python function to solve tower of hanoi
def TowerOfHanoi(n , from_rod, to_rod, aux_rod):
    if n == 0:
        return
        TowerOfHanoi(n-1, from_rod, aux_rod, to_rod)
        print("Move disk",n,"from rod",from_rod,"to rod",to_rod)
        TowerOfHanoi(n-1, aux_rod, to_rod, from_rod)
# Driver code
n = 4
TowerOfHanoi(n, 'A', 'C', 'B')
# A, C, B are the name of rods
```

Output:

Move disk 1 from rod A to rod B
Move disk 2 from rod B to rod C
Move disk 1 from rod B to rod C
Move disk 3 from rod A to rod B
Move disk 1 from rod C to rod A
Move disk 2 from rod C to rod B
Move disk 1 from rod A to rod B
Move disk 1 from rod A to rod C
Move disk 4 from rod B to rod C
Move disk 1 from rod B to rod C
Move disk 2 from rod C to rod A
Move disk 1 from rod C to rod A
Move disk 3 from rod B to rod C
Move disk 3 from rod B to rod C
Move disk 1 from rod A to rod C
Move disk 1 from rod A to rod C
Move disk 1 from rod A to rod C
Move disk 1 from rod B to rod C

Viva Questions:

- 1. What is AI? What are the Applications of AI.
- 2. What is Problem Space?
- 3. What are the Properties of Environment?

PROGRAM-6

Aim:

Write a Program to Implement Breadth First Search.

Program:

```
graph = \{
 '5': ['3','7'],
 '3': ['2', '4'],
 '7': ['8'],
 '2': [],
 '4': ['8'],
 '8':[]
visited = [] # List for visited nodes.
queue = []
             #Initialize a queue
def bfs(visited, graph, node): #function for BFS
 visited.append(node)
 queue.append(node)
 while queue:
                     # Creating loop to visit each node
  m = queue.pop(0)
  print (m, end = " ")
  for neighbour in graph[m]:
   if neighbour not in visited:
     visited.append(neighbour)
     queue.append(neighbour)
# Driver Code
print("Following is the Breadth-First Search")
bfs(visited, graph, '5') # function calling
```

Output:

Following is the Breadth-First Search 5 3 7 2 4 8

Viva Questions:

- 1. Differences between Informed and Uninformed Search.
- 2. What are the Properties Of Search Algorithms.
- 3. What is Breadth-First-Search.

Signature Of Faculty

Aim: Write a Program to Implement Depth First Search.

Program:

```
graph = {
 '5': ['3','7'],
 '3': ['2', '4'],
 '7': ['8'],
 '2':[],
 '4' : ['8'],
 '8':[]
}
visited = set() # Set to keep track of visited nodes of graph.
def dfs(visited, graph, node): #function for dfs
  if node not in visited:
     print (node)
     visited.add(node)
  for neighbour in graph[node]:
     dfs(visited, graph, neighbour)
# Driver Code
print("Following is the Depth-First Search")
```

dfs(visited, graph, '5')

Output:

Following is the Depth-First Search

5

3

2

4

8

7

Viva Questions:

- 1. What is Depth-First- Search.
- 2. Differences between BFS and DFS.
- 3. Write the Applications of Stack and Queue.

Aim:

Write a program to implement Water Jug Problem?

Program:

```
# This function is used to initialize the
# dictionary elements with a default value.
from collections import defaultdict
# jug1 and jug2 contain the value
# for max capacity in respective jugs
# and aim is the amount of water to be measured.
jug1, jug2, aim = 4, 3, 2
# Initialize dictionary with
# default value as false.
visited = defaultdict(lambda: False)
# Recursive function which prints the
# intermediate steps to reach the final
# solution and return boolean value
# (True if solution is possible, otherwise False).
# amt1 and amt2 are the amount of waterpresent
# in both jugs at a certain point of time.
def waterJugSolver(amt1, amt2):
       # Checks for our goaland
       # returns true if achieved.
       if (amt1 == aim and amt2 == 0) or (amt2 == aim and amt1 == 0):
               print(amt1, amt2)
               return True
       # Checks if we have already visited the
       # combination or not. If not, then it proceeds further.
       if visited[(amt1, amt2)] == False:
               print(amt1, amt2)
               # Changes the boolean value of
               # the combination as it is visited.
               visited[(amt1, amt2)] = True
```

Check for all the 6 possibilities and

```
# see if a solution is found in any one of them.return
(waterJugSolver(0, amt2) or
                                waterJugSolver(amt1, 0) or
                                waterJugSolver(jug1, amt2) or
                                waterJugSolver(amt1, jug2) or
                                waterJugSolver(amt1 + min(amt2, (jug1-amt1)),
                                amt2 - min(amt2, (jug1-amt1))) or
                                waterJugSolver(amt1 - min(amt1, (jug2-amt2)),
                                amt2 + min(amt1, (jug2-amt2))))
         # Return False if the combination is
         # already visited to avoid repetition otherwise
         # recursion will enter an infinite loop.
         else:
                return False
  print("Steps: ")
  # Call the function and pass the
  # initial amount of water present in both jugs.
  waterJugSolver(0, 0)
```

Output:
