#### FOREWORD

The autonomy is conferred on Malla Reddy College of Engineering & Technology (MRCET) by UGC based on its performance as well as future commitment and competency to impart quality education. It is a mark of its ability to function independently in accordance with the set norms of the monitoring bodies like UGC and AICTE. It reflects the confidence of the UGC in the autonomous institution to uphold and maintain standards it expects to deliver on its own behalf and thus awards degrees on behalf of the college. Thus, an autonomous institution is given the freedom to have its own curriculum, examination system and monitoring mechanism, independent of the affiliating University but under its observance.

Malla Reddy College of Engineering & Technology (MRCET) is proud to win the credence of all the above bodies monitoring the quality of education and has gladly accepted the responsibility of sustaining, and also improving upon the values and beliefs for which it has been striving for more than a decade in reaching its present standing in the arena of contemporary technical education. As a follow up, statutory bodies like Academic Council and Boards of Studies are constituted with the guidance of the Governing Body of the College and recommendations of the JNTU Hyderabad to frame the regulations, course structure and syllabi under autonomous status.

The autonomous regulations, course structure and syllabi have been prepared after prolonged and detailed interaction with several experts drawn from academics, industry and research, in accordance with the vision and mission of the college which reflects the mindset of the institution in order to produce quality engineering graduates to the society.

All the faculty, parents and students are requested to go through all the rules and regulations carefully. Any clarifications, if needed, are to be sought at appropriate time with principal of the college, without presumptions, to avoid unwanted subsequent inconveniences and embarrassments. The cooperation of all the stakeholders is sought for the successful implementation of the autonomous system in the larger interests of the institution and brighter prospects of engineering graduates.

#### (R18A0586) DATABASE MANAGEMENT SYSTEMS LAB

#### Objectives

Students will have the ability to:

- Keep abreast of current developments to continue their own professional development.
- To engage themselves in lifelong learning of Database management systems theories and technologies this enables them to purse higher studies.
- To interact professionally with colleagues or clients located abroad and the ability to overcome challenges that arises from geographic distance, cultural differences, and multiple languages in the context of computing.
- Develop team spirit, effective work habits, and professional attitude in written and oral forms, towards the development of database applications

#### A. Practice on SQL Queries to acquire knowledge on RDBMS.

#### B. Case Study:

**Objective:** This lab enables the students to practice the concepts learnt in the subject DBMS by developing a database for an example company named "Roadway Travels" whose description is as follows. The student is expected to practice the designing, developing and querying a database in the context of example database -Roadway travels". Students are expected to use "Mysql" database.

**Roadway Travels:** "Roadway Travels" is in business since 1997 with several buses connecting different places in India. Its main office is located in Hyderabad.

The company wants to computerize its operations in the following areas:

- Reservations and Ticketing
- Cancellations
- Reservations & Cancellation:

Reservations are directly handled by booking office. Reservations can be made 30 days in advance and tickets issued to passenger. One Passenger/person can book many tickets (to his/her family).

Cancellations are also directly handed at the booking office.

In the process of computerization of Roadway Travels you have to design and develop a Database which consists the data of Buses, Passengers, Tickets, and Reservation and cancellation details. You should also develop query's using SQL to

retrieve the data from the database.

The above Process involves many steps like 1. Analyzing the problem and identifying the Entitites and Relationships, 2. E-R Model, 3. Relational Model 4. Normalization 5. Creating the database 6. Querying. Students are supposed to work on these steps week wise and finally create a complete "Database System" to Roadway Travels. Examples are given at every experiment for guidance to students.

Querying. Students are supposed to work on these steps week wise and finally create a complete "Database System" to Roadway Travels. Examples are given at every experiment for guidance to students.

#### Experiment 1: E-R Model

Analyze the problem carefully and come up with the entities in it using software design tool. Identify what data has to be persisted in the database. This contains the entities, attributes etc.

Identify the primary keys for all the entities. Identify the other keys like candidate keys, partial keys, if any.

Example:

#### **Entities:**

- 1. BUS
- 2. Ticket
- 3. Passenger

#### **Relationships:**

- 1. Reservation
- 2. Cancellation

#### PRIMARY KEY ATTRIBUTES:

- 1. Ticket ID (Ticket Entity)
- 2. Passport ID (Passenger Entity)
- 3. Bus\_NO(Bus Entity)

Apart from the above mentioned entities you can identify more. The above mentioned

are few.

Ex: Bus Entity

Ex: Reservation relationship

### Note: The student is required to submit a document by writing the Entities and Keys to the lab teacher

#### Experiment 2: Installation of Mysql and practicing DDL, commands

Installation of MySql. In this week you will learn Creating databases, How to create tables, altering the database, dropping tables and databases if not required. You will also try truncate, rename commands etc.

Example for creation of a normalized

"Passenger" table. CREATE TABLE Passenger (

Passport\_id INTEGER

PRIMARY KEY, Name VARCHAR (50) Not NULL, Age Integer Not NULL, Sex Char, Address VARCHAR (50) Not NULL); Similarly create all other tables. **Note: Detailed creation of tables is given at the end.** 

#### **Experiment 3: Practicing DML commands**

DML commands are used to for managing data within schema objects. Some examples:

- SELECT retrieve data from the a database
- INSERT insert data into a table
- UPDATE updates existing data within a table
- DELETE deletes all records from a table, the

space for The records remain

#### Inserting values into "Bus" table:

Insert into Bus values(1234, 'hyderabad', 'tirupathi'

```
Insert into Bus values (2345,'hyderabd'
'Banglore'); Insert into Bus values
(23,'hyderabd','Kolkata');
Insert into Bus values
(45,'Tirupathi,'Banglore'); Insert into
Bus values (34,'hyderabd','Chennai');
Inserting values into "Passenger"
table:
```

```
Insert into Passenger values (1, 45,'ramesh', 45,'M',
'abc123'); Insert into Passenger values (2,
78,'geetha', 36,'F','abc124'); Insert into Passenger
values (45, 90,' ram', 30,'M','abc12'); Insert into
Passenger values (67, 89,' ravi', 50,'M','abc14');
Insert into Passenger values (56, 22,'seetha',
32,'F','abc55'); Few more Examples of DML
commands:
Select * from Bus; (selects all the attributes
```

#### WHERE BUS NO=2;

#### **Experiment 4: Querying**

In this week you are going to practice queries (along with sub queries) using ANY, ALL, IN, Exists, NOT EXISTS, UNION, INTERSECT, Constraints etc.

Display unique PNR\_no of all Passengers. Display all the names of male passengers. Display the ticket numbers and names of all the passengers. Find the ticket numbers of the passengers whose name start with 'r' and ends with 'h'. Find the names of passengers whose age is between 30 and 45. Display all the passengers names beginning with 'A' Display the sorted list of passengers names

#### Experiment 5: Aggregate Functions and Number Functions, Nested Query and

**Co-related Queries** You are going to practice queries using Aggregate functions and number functions(COUNT, SUM, AVG, and MAX and MIN), GROUP BY, HAVING and Creation and dropping of Views.

Write a Query to display the Information present in the Passenger and cancellation tables. Hint: Use UNION Operator.

Display the number of days in a week on which the 9W01 bus is available. Find number of tickets booked for each PNR\_no using GROUP BY CLAUSE. Hint: Use GROUP BY on PNR\_No.

Find the distinct PNR numbers that are present.

Find the number of tickets booked by a passenger where the number of seats is greater than 1. Hint: Use GROUP BY, WHERE and HAVING CLAUSES. Find the total number of cancelled seats.

#### **Nested Query and Co-related Queries**

Use the tables sailors, reserves, boats for implementing the following Sailors(sid: integer, sname: string, rating: integer, age: real); Boats(bid: integer, bname: string, color: string); Reserves(sid: integer, bid: integer, day: date). a. Find the names of sailors who have reserved boat 103

#### **Experiment 10: Normalization**

Database normalization is a technique for designing relational database tables to minimize duplication of information and, in so doing, to safeguard the database against certain types of logical or structural problems, namely data anomalies. For example, when multiple instances of a given piece of information occur in a table, the possibility exists that these instances will not be kept consistent when the data within the table is updated, leading to a loss of data

integrity. A table that is sufficiently normalized is less vulnerable to problems of this kind, because its structure reflects the basic assumptions for when multiple instances of the same information should be represented by a single instance only.

For the above table in the First normalization we can remove the multi valued attribute Ticket\_id and place it in another table along with the primary key of passenger.

#### First Normal Form: The above table can be divided into two tables as shown below.

Name Age Sex Address <u>Passport ID</u>	Passenger				
	Name	Age	Sex	Address	Passport ID

Passport\_id

Ticket id

You can do the second and third normal forms if required. Any how Normalized tables are given at the end.

#### Experiment 11: PL/SQL Programs

In this week, you are going to learn and work on PL/SQL procedures.

a. Write a PL/SQL procedure to find the average of marks?

b. Write a PL/SQL procedure to find the factorial of a number?

c. Write a PL/SQL code to calculate tax for an employee of an organization – XYZ

and to display his/her name & tax, by creating a table under employee database as below.

Employee\_salaryEmp\_no Basic HRA DA Total\_deduction Net\_salary Gross\_salary

#### Experiment 12: Revoke/Grant/Commit/Rollback

In this week, you need to do the following: Declare a table that defines a result set using revoke, grant, savepoint, commit, rollback operations

Consider the following tables namely "DEPARTMENTS" and "EMPLOYEES"

Their schemas are as follows, Departments (dept \_no, dept\_ name,

dept\_location ); Employees ( emp\_id , emp\_name , emp\_salary );

- a. Develop a query to grant all privileges of employees table into departments table
- b. Develop a query to grant some privileges of employees table into departments table
- c. Develop a query to revoke all privileges of employees table from departments table
- d. Develop a query to revoke some privileges of employees table from departments table
- e. Write a query to implement the save point
- f. Write a query to implement the

commit g.Write a query to

implement rollback

Q. No. 8 a) Write a précis for the paragraph below (in 50 words) and suggest a suitable title.

We all know what we mean by a "good" man. The ideally good man does not drink or smoke, avoids bad language, converses in the presence of men only exactly as he would if there were ladies present, attends church regularly and holds the correct opinion on all subjects. He has a wholesome horror of wrong-doing and realizes that it is our painful duty to castigate sin. He has a still greater horror of wrong thinking, and considers it the business of the authorities to safeguard the young against those who question the wisdom of the views generally accepted by middleaged successful citizens. Apart from his professional duties, at which he is assiduous, he spends much time in good works: he may encourage patriotism and military training; he may promote industry, sobriety and virtue among wage earners and their children by seeing to it that failures in these respects receive due punishment; he may be a trustee of a university and prevent an ill-judged respect for learning from allowing the employment of professors with subversive ideas. Above all, of course, his "morals" in the narrow sense must be irreproachable.

Men and women are of equal rank but they are not identical. They are be peerless pair being supplementary to one another, each helps the other so that without one the existence of the other cannot be conceived and, therefore it follows as a necessary corollary from these facts that anything that will impair the status of either of them will involve the equal ruin of them both. In framing any scheme of women's education this cardinal truth must be constantly kept in mind. Man is supreme in the outward activities of a married air and therefore it is in the fitness of things that he should have a greater knowledge thereof. On the other hand, noise life is entirely the sphere of woman and, therefore in domestic affairs, in the upbringing and education of children, woman ought to have more knowledge Not that knowledge should be divided into water tight compartment's or that so that some branches of knowledge should be closed to anyone, but unless courses of instruction are based on discriminating appreciation of these basic principles, the fullest life of man and woman cannot be developed. Among the manifold misfortunes that may befall humanity, the loss of health is one of the severest. All the joys which life can give cannot outweigh the sufferings of the sick.
