BASIC SIMULATION
LABORATORY MANUAL
B.TECH
(II YEAR – I SEM)
(2019-20)

Prepared by:
Mrs.N.Saritha, Assistant Professor
Mr.T.Srinivas, Assistant Professor

Department of Electronics and Communication Engineering

MALLA REDDY COLLEGE
OF ENGINEERING & TECHNOLOGY
(Autonomous Institution – UGC, Govt. of India)
Recognized under 2(f) and 12 (B) of UGC ACT 1956
Affiliated to JNTUH, Hyderabad, Approved by AICTE - Accredited by NBA & NAAC – ‘A’ Grade - ISO 9001:2015 Certified
Maisammaguda, Dhulpally (Post Via. Kompally), Secunderabad – 500100, Telangana State, India
VISION
To evolve into a center of excellence in Engineering Technology through creative and innovative practices in teaching-learning, promoting academic achievement & research excellence to produce internationally accepted competitive and world class professionals.

MISSION
To provide high quality academic programmes, training activities, research facilities and opportunities supported by continuous industry institute interaction aimed at employability, entrepreneurship, leadership and research aptitude among students.

QUALITY POLICY
- Impart up-to-date knowledge to the students in Electronics & Communication area to make them quality engineers.
- Make the students experience the applications on quality equipment and tools.
- Provide systems, resources and training opportunities to achieve continuous improvement.
- Maintain global standards in education, training and services.
## PROGRAMME EDUCATIONAL OBJECTIVES

<table>
<thead>
<tr>
<th>PEO1: PROFESSIONALISM &amp; CITIZENSHIP</th>
<th>To create and sustain a community of learning in which students acquire knowledge and learn to apply it professionally with due consideration for ethical, ecological and economic issues.</th>
</tr>
</thead>
<tbody>
<tr>
<td>PEO2: TECHNICAL ACCOMPLISHMENTS</td>
<td>To provide knowledge based services to satisfy the needs of society and the industry by providing hands on experience in various technologies in core field.</td>
</tr>
<tr>
<td>PEO3: INVENTION, INNOVATION AND CREATIVITY</td>
<td>To make the students to design, experiment, analyze, interpret in the core field with the help of other multi disciplinary concepts wherever applicable.</td>
</tr>
<tr>
<td>PEO4: PROFESSIONAL DEVELOPMENT</td>
<td>To educate the students to disseminate research findings with good soft skills and become a successful entrepreneur.</td>
</tr>
<tr>
<td>PEO5: HUMAN RESOURCE DEVELOPMENT</td>
<td>To graduate the students in building national capabilities in technology, education and research.</td>
</tr>

</table>
CODE OF CONDUCT FOR THE LABORATORIES

1. All students must observe the Dress Code while in the laboratory.
2. Sandals or open-toed shoes are NOT allowed.
3. Foods, drinks and smoking are NOT allowed.
4. All bags must be left at the indicated place.
5. The lab timetable must be strictly followed.
6. Be punctual for your laboratory session.
7. Program must be executed within the given time.
8. Noise must be kept to a minimum.
9. Workspace must be kept clean and tidy at all time.
10. Handle the systems and interfacing kits with care.
11. All students are liable for any damage to the accessories due to their own negligence.
12. All interfacing kits connecting cables must be RETURNED if you taken from the lab supervisor.
13. Students are strictly PROHIBITED from taking out any items from the laboratory.
14. Students are NOT allowed to work alone in the laboratory without the Lab Supervisor.
15. USB Ports have been disabled if you want to use USB drive consult lab supervisor.
16. Report immediately to the Lab Supervisor if any malfunction of the accessories, is there.

Before leaving the lab

➢ Place the chairs properly.
➢ Turn off the system properly
➢ Turn off the monitor.
➢ Please check the laboratory notice board regularly for updates.

BASIC OPERATIONS ON MATRICES

AIM: Generate a matrix and perform basic operation on matrices using MATLAB software.

Software Required: MATLAB software

Theory:
MATLAB treats all variables as matrices. Vectors are special forms of matrices and contain only one row or one column. Whereas scalars are special forms of matrices and contain only one row and one column. A matrix with one row is called row vector and a matrix with single column is called column vector.

The first one consists of convenient matrix building functions, some of which are given below.
1. eye - identity matrix
2. zeros - matrix of zeros
3. ones - matrix of ones
4. diag - extract diagonal of a matrix or create diagonal matrices
5. triu - upper triangular part of a matrix
6. tril - lower triangular part of a matrix
7. rand - ran

Commands in the second sub-category of matrix functions are
1. size - size of a matrix
2. det - determinant of a square matrix
3. inv - inverse of a matrix
4. rank - rank of a matrix
5. rref - reduced row echelon form
6. eig - eigenvalues and eigenvectors
7. poly - characteristic polynomial of a randomly generated matrix

Program:

% Creating a column vector

>> a=[1;2;3]

a =
1
2
3

% Creating a row vector

>> b=[1 2 3]

b =
1 2 3
% Creating a matrix
>> m=[1 2 3;4 6 9;2 6 9]

m =
1 2 3
4 6 9
2 6 9

% Extracting sub matrix from matrix
>> sub_m=m(2:3,2:3)

sub_m =
6 9
6 9

% extracting column vector from matrix
>> c=m(:,2)

c =
2
6
6

% extracting row vector from matrix
>> d=m(3,:)

d =
2 6 9

% creation of two matrices a and b
>> a=[2 4 -1;-2 1 9;-1 -1 0]

a =
2 4 -1
-2 1 9
-1 -1 0

>> b=[0 2 3;1 0 2;1 4 6]

b =
0 2 3
1 0 2
1 4 6
% matrix multiplication

>> x1=a*b
x1 =
3 0 8
10 32 50
-1 -2 -5

% element to element multiplication

>> x2=a.*b
x2 =
0 8 -3
-2 0 18
-1 -4 0

% matrix addition

>> x3=a+b
x3 =
2 6 2
-1 1 11
0 3 6

% matrix subtraction

>> x4=a-b
x4 =
2 2 -4
-3 1 7
-2 -5 -6

% matrix division

>> x5=a/b
x5 =
-9.0000 -3.5000 5.5000
12.0000 3.7500 -5.7500
3.0000 0.7500 -1.7500

% element to element division

>> x6=a./b

Warning: Divide by zero.
x6 =
Inf 2.0000 -0.3333
-2.0000 Inf 4.5000
-1.0000 -0.2500 0
% inverse of matrix a
>> x7=inv(a)
x7 =
-0.4286 -0.0476 -1.7619
0.4286 0.0476 0.7619
-0.1429 0.0952 -0.4762
% transpose of matrix a
>> x8=a'
x8 =
2 -2 -1
4 1 -1
-1 9 0
RESULT: Matrix operations are performed using Matlab software.

VIVA QUESTIONS:-
1. Expand MATLAB? And importance of MATLAB?
2. What is clear all and close all will do?
3. What is disp() and input()?
4. What is the syntax to find the Eigen values and eigenvectors of the matrix?
5. Define scalar and vector?
Experiment No-2
Generation of signals and sequences

**AIM:** Generate various signals and sequences (Periodic and aperiodic), such as Unit Impulse, Unit Step, Square, Saw tooth, Triangular, Sinusoidal, Ramp, Sinc.

**Software Required:** Matlab software

**Theory:** If the amplitude of the signal is defined at every instant of time then it is called continuous time signal. If the amplitude of the signal is defined at only at some instants of time then it is called discrete time signal. If the signal repeats itself at regular intervals then it is called periodic signal. Otherwise they are called aperiodic signals.

EX: ramp, Impulse, unit step, sinc - Aperiodic signals
    square, sawtooth, triangular sinusoidal – periodic signals.

**Ramp signal:** The **ramp function** is a unitary real function, easily computable as the mean of the independent variable and its absolute value. This function is applied in engineering. The name **ramp function** is derived from the appearance of its graph.

\[
r(t) = \begin{cases} 
  t & \text{when } t \geq 0 \\
  0 & \text{else} 
\end{cases}
\]

**Unit impulse signal:** One of the more useful functions in the study of linear systems is the "unit impulse function." An ideal impulse function is a function that is zero everywhere but at the origin, where its amplitude is infinitely high. However, the area of the impulse is finite

\[
Y(t) = \begin{cases} 
  1 & \text{when } t=0 \\
  0 & \text{otherwise} 
\end{cases}
\]

**Unit step signal:** The unit step function and the impulse function are considered to be fundamental functions in engineering, and it is strongly recommended that the reader becomes very familiar with both of these functions.

\[
u(t) = \begin{cases} 
  0 & \text{if } t < 0 \\
  1 & \text{if } t > 0 \\
  \frac{1}{2} & \text{if } t=0 
\end{cases}
\]

**Sinc signal:** There is a particular form that appears so frequently in communications engineering, that we give it its own name. This function is called the "Sinc function". The Sinc function is defined in the following manner:

\[
sinc(x) = \frac{\sin(\pi x)}{\pi x} \quad \text{if } x \neq 0 \text{ and } sinc(0) = 1
\]

The value of sinc(x) is defined as 1 at x = 0, since
\[ \lim_{x \to 0} \text{sinc}(x) = 1 \]

PROCEDURE:
- Open MATLAB
- Open new M-file
- Type the program
- Save in current directory
- Compile and Run the program
- For the output see command window\ Figure window

PROGRAM:

ylabel('amplitude');
title('sinc sequence');

Result: Various signals & sequences generated using Matlab software.
Output:

- **Unit Impulse Signal**: A single pulse of amplitude 1 at time 0.
- **Unit Impulse Sequence**: A single pulse of amplitude 1 at sample 0.
- **Unit Step Signal**: A step function that changes from 0 to 1 at time 0.
- **Unit Step Sequence**: A step function that changes from 0 to 1 at sample 0.

- **Square Wave Signal**: A periodic waveform that alternates between two levels.
- **Square Wave Sequence**: A periodic sequence that alternates between two levels.

- **Sawtooth Wave Signal**: A waveform that rises linearly and then drops back to the starting point.
- **Sawtooth Wave Sequence**: A sequence that rises linearly and then drops back to the starting point.
VIVA QUESTIONS:-
1. Define Signal?
2. Define continuous and discrete Signals?
3. State the relation between step, ramp and Delta Functions?
4. Differentiate saw tooth and triangular signals?
5. Define Periodic and aperiodic Signal?
Experiment No-3
Basic Operations on Signals and sequences

AIM: perform the operations on signals and sequences such as addition, multiplication, scaling, shifting, folding and also compute energy and power.

Software Required: Matlab software.

Theory:

Signal Addition

Addition: any two signals can be added to form a third signal,

\[ z(t) = x(t) + y(t) \]

Multiplication:

Multiplication of two signals can be obtained by multiplying their values at every instant. \[ z(t) = x(t) \cdot y(t) \]

Time reversal/Folding:

Time reversal of a signal \( x(t) \) can be obtained by folding the signal about \( t=0 \).

\[ Y(t) = y(-t) \]

Signal Amplification/Scaling:

\[ Y(n) = ax(n) \] if \( a < 1 \) attenuation

\[ a > 1 \] amplification

Time shifting:

The time shifting of \( x(n) \) obtained by delay or advance the signal in time by using \( y(n) = x(n+k) \)

If \( k \) is a positive number, \( y(n) \) shifted to the right i.e. the shifting delays the signal

If \( k \) is a negative number, \( y(n) \) it gets shifted left. Signal Shifting advances the signal
Energy:

$$E[x] = \lim_{N \to \infty} \sum_{n=-N}^{N} |x[n]|^2 = \sum_{n=-\infty}^{\infty} |x[n]|^2$$

Average power:

$$P[x] = \lim_{N \to \infty} \frac{1}{2N+1} \sum_{n=-N}^{N} |x[n]|^2$$

Program:

```matlab
clc;
clear all;
close all;

% generating two input signals
N = 1000;
t = 0:0.01:1;
x1 = sin(2*pi*4*t);

**OUTPUT:**

enter the input sequence[1 3 2 4 1]

energy of given sequence is
e1 = 31

enenergy of given signal is
e2 = 4.0388

power of given sequence is
p1 = 6.2000

power of given signal is
p2 = 0.3672

**Result:** Various operations on signals and sequences are performed.
Output:

**input signal 1**

**input signal 2**

**addition of two signals**

**multiplication of two signals**
VIVA QUESTIONS:-
1. Define Symmetric and Anti-Symmetric Signals?
2. Define scaling of a signal?
3. What are the Different types of representation of discrete time signals?
4. What are the Different types of Operation performed on signals?
5. What is System?
Experiment No-4
Even and odd parts of signal and sequence & Real and imaginary parts of Signal

AIM: Finding even and odd part of the signal and sequence and also find real and imaginary parts of signal.

Software Required: Matlab software

Theory: One of characteristics of signal is symmetry that may be useful for signal analysis. Even signals are symmetric around vertical axis, and Odd signals are symmetric about origin.

Even Signal: A signal is referred to as an even if it is identical to its time-reversed counterparts; \( x(t) = x(-t) \).

Odd Signal: A signal is odd if \( x(t) = -x(-t) \).

An odd signal must be 0 at \( t=0 \), in other words, odd signal passes the origin.

Using the definition of even and odd signal, any signal may be decomposed into a sum of its even part, \( x_e(t) \), and its odd part, \( x_o(t) \), as follows

Even and odd part of a signal: Any signal \( x(t) \) can be expressed as sum of even and odd components i.e.,

\[
x(t) = x_e(t) + x_o(t)
\]

\[
x_e(t) = \frac{1}{2} \{ x(t) + x(-t) \}
\]

\[
x_o(t) = \frac{1}{2} \{ x(t) - x(-t) \}
\]

Program:

```matlab
clear all;
clc

% Even and odd parts of a signal
t=0:.001:4*pi;
x=sin(t)+cos(t); % x(t)=sint(t)+cos(t)
subplot(2,2,1)
plot(t,x)
xlabel('t');
ylabel('amplitude')
title('input signal')

y=sin(-t)+cos(-t); % y(t)=x(-t)
subplot(2,2,2)
plot(t,y)
xlabel('t');
ylabel('amplitude')
title('input signal with t=-t')
```

20
even=(x+y)/2;
subplot(2,2,3)
plot(t,even)
xlabel('t');
ylabel('amplitude')
title('even part of the signal')

stem(n,odd1);
xlabel('n');
ylabel('amplitude');
title('odd part of sequence');

% plotting real and imaginary parts of the signal
x2=sin(t)+j*cos(t);
figure;
subplot(3,1,1);
plot(t,x2);
xlabel('t');
ylabel('amplitude');
 RESULT: Even and odd part of the signal and sequence, real and imaginary parts of signal are computed.
VIVA QUESTIONS:-
1. What is the formula to find odd part of signal?
2. What is Even Signal?
3. What is Odd Signal?
4. What is the formula to find even part of signal?
5. How to represent a signal with even and odd parts?
Experiment No-5
Convolution between signals & sequences

Aim: Write the program for convolution between two signals and also between two sequences.

Software Required: Matlab software

Theory:

Convolution involves the following operations.
1. Folding
2. Multiplication
3. Addition
4. Shifting

\[ y[n] = \sum_{k=-\infty}^{\infty} x[k] \delta(n-k) \]

These operations can be represented by a Mathematical Expression as follows:
\( x[n] \) = Input signal Samples
\( h[n-k] \) = Impulse response co-efficient.
\( y[n] \) = Convolution output.
\( n \) = No. of Input samples
\( h \) = No. of Impulse response co-efficient.
Example: \( X(n) = \{1 \ 2 \ -1 \ 0 \ 1\} \), \( h(n) = \{1,2,3,-1\} \)

Program:

clc;
close all;
clear all;
%program for convolution of two sequences
x=input('enter input sequence: ');
h=input('enter impulse response: ');
y=conv(x,h);
subplot(3,1,1);
stem(x);
xlabel('n');
ylabel('x(n)');
title('input sequence')
subplot(3,1,2);
stem(h);
xlabel('n');
ylabel('h(n)');
title('impulse response sequence')
subplot(3,1,3);
stem(y);
xlabel('n');
ylabel('y(n)');
title('linear convolution')
disp('Linear convolution y=');
disp(y)

% program for signal convolution

t=0:0.1:10;
x1=sin(2*pi*t);

\end{array}
VIVA QUESTIONS:-

1. Define Convolution?
2. Define Properties of Convolution?
3. What is the Difference between Convolution& Correlation?
4. Define impulse response?
5. What is Half Wave Symmetry?
**Experiment No-6**

**Auto correlation and Cross correlation**

**Aim:** To compute Auto correlation and Cross correlation between signals and sequences.

**Software Required:** Mat lab software

**Theory:**

**Correlations of sequences:**

It is a measure of the degree to which two sequences are similar. Given two real-valued sequences \(x(n)\) and \(y(n)\) of finite energy,

Convolution involves the following operations.

1. Shifting
2. Multiplication
3. Addition

These operations can be represented by a Mathematical Expression as follows:

**Cross correlation**

\[
r_{x,y}(l) = \sum_{n=-\infty}^{\infty} x(n) y(n-l)
\]

The index \(l\) is called the shift or lag parameter

**Autocorrelation**

\[
r_{x,x}(l) = \sum_{n=-\infty}^{\infty} x(n)x(n-l)
\]

**Program:**

```matlab
clc;
close all;
clear all;

% two input sequences
x=input('enter input sequence');
h=input('enter the impulse suquence');
subplot(2,2,1);
stem(x);
xlabel('n');
ylabel('x(n)');
title('input sequence');
subplot(2,2,2);
stem(h);
xlabel('n');
ylabel('h(n)');
title('impulse sequence');
```

% cross correlation between two sequences
y=xcorr(x,h);
subplot(2,2,3);
stem(y);
xlabel('n');
ylabel('y(n)');
title('cross correlation between two sequences ');

% auto correlation of input sequence
z=xcorr(x,x);
subplot(2,2,4);
stem(z);
xlabel('n');
ylabel('z(n)');
title('auto correlation of input sequence');

% cross correlation between two signals
% generating two input signals
t=0:0.2:10;
x1=3*exp(-2*t);
h1=exp(t);
figure;
subplot(2,2,1);
plot(t,x1);
xlabel('t');
ylabel('x1(t)');
title('input signal');
subplot(2,2,2);
plot(t,h1);
xlabel('t');
ylabel('h1(t)');
title('impulse signal');

% cross correlation
subplot(2,2,3);
z1=xcorr(x1,h1);
plot(z1);
xlabel('t');
ylabel('z1(t)');
title('cross correlation ');
% auto correlation
subplot(2,2,4);
z2=xcorr(x1,x1);
plot(z2);
xlabel('t');
ylabel('z2(t)');
title('auto correlation ');

Result: Auto correlation and Cross correlation between signals and sequences is computed.
Output: enter input sequence \([1 \ 2 \ 5 \ 7]\)
enter the impulse sequence \([2 \ 6 \ 0 \ 5 \ 3]\)
VIVA QUESTIONS:-
1. Define Correlation? And its properties?
2. Define Auto-Correlation?
3. Define Cross-Correlation?
4. What is the importance of correlation?
5. What is the difference b/w correlation and convolution?
Experiment No-7(a)
Verification of Linearity of a Discrete System

AIM: Verify the Linearity of a given Discrete System.

Software Required:
Mat lab software 7.0 and above

Theory:

LINEARITY PROPERTY:
Any system is said to be linear if it satisfies the superposition principal. Superposition principal state that Response to a weighted sum of input signal equal to the corresponding weighted sum of the outputs of the system to each of the individual input signals.

If x(n) is a input signal and y(n) is a output signal then

\[ y(n) = T[x(n)] \]
\[ y_1(n) = T[x_1(n)] \] and \[ y_2(n) = T[x_2(n)] \]
\[ x_3 = a * x_1(n) + b * x_2(n) \]
\[ Y_3(n) = T[x_3(n)] \]
\[ T[a * x_1(n) + b * x_2(n)] = a * y_1(n) + b * y_2(n) \]

Program:
% Verification of Linearity of a given System.
% a) y(n)=nx(n)  b) y=x^2(n)

3. Define LTI system?
4. Give mathematical expression for time invariant system?
5. Give another name for time invariant system and time variant system?
Experiment No-8

Unit sample, unit step and sinusoidal response of the given LTI system and verifying its stability

AIM: Compute the Unit sample, unit step and sinusoidal response of the given LTI system and verifying its stability

Software Required:

Matlab software 7.0 and above

Theory:

A discrete time system performs an operation on an input signal based on predefined criteria to produce a modified output signal. The input signal \( x(n) \) is the system excitation, and \( y(n) \) is the system response. The transform operation is shown as,

\[
x(n) \rightarrow T \rightarrow y(n) = T[x(n)]
\]

If the input to the system is unit impulse i.e. \( x(n) = \delta(n) \) then the output of the system is known as impulse response denoted by \( h(n) \) where,

\[
h(n) = T[\delta(n)]
\]

we know that any arbitrary sequence \( x(n) \) can be represented as a weighted sum of discrete impulses. Now the system response is given by,

\[
y(n) = T[x(n)] = T\left[\sum_{k=-\infty}^{\infty} x(k) \delta(n-k)\right]
\]

For linear system (1) reduces to

\[
y(n) = \sum_{k=-\infty}^{\infty} x(k) T[\delta(n-k)]
\]

% given difference equation \( y(n)-y(n-1)+.9y(n-2)=x(n) \);

\[
H(Z)=\frac{\sum_{k=0}^{M} b_k X(n-k)}{\sum_{k=1}^{N} a_k X(n-k)}
\]
Program:

```
% given difference equation y(n) - y(n-1) + 0.9y(n-2) = x(n);
clc;
clear all;
close all;
b=[1];
a=[1,-1,0.9];
n = 0:3:100;

% generating impulse signal
x1=(n==0);
% impulse response
y1=filter(b,a,x1);
subplot(3,1,1);
stem(n,y1);
xlabel('n');
ylabel('y1(n)');
title('impulse response');

% generating step signal
x2=(n>0);
% step response
y2=filter(b,a,x2);
subplot(3,1,2);
stem(n,y2);
xlabel('n');
ylabel('y2(n)');
title('step response');

% generating sinusoidal signal

  t=0:0.1:2*pi;
x3=sin(t);
% sinusoidal response
y3=filter(b,a,x3);
subplot(3,1,3);
stem(t,y3);
xlabel('n');
ylabel('y3(n)');
title('sin response');

% verifying stability
figure;
zplane(b,a);
```
Result: The Unit sample, unit step and sinusoidal response of the given LTI system is computed and its stability verified. Hence all the poles lie inside the unit circle, so system is stable.

Output:
VIVA QUESTIONS:-

1. What operations can be performed on signals and sequence?
2. Define causality and stability?
3. Define step response and impulse response of the system.
4. Define poles and zeros of the system?
5. What is the function of filter?
AIM: Verify the Gibbs phenomenon.

Software Required: Matlab software

Theory:

The Gibbs phenomenon, the Fourier series of a piecewise continuously differentiable periodic function behaves at a jump discontinuity. The $n$ the approximated function shows amounts of ripples at the points of discontinuity. This is known as the Gibbs Phenomena. partial sum of the Fourier series has large oscillations near the jump, which might increase the maximum of the partial sum above that of the function itself. The overshoot does not die out as the frequency increases, but approaches a finite limit.

The Gibbs phenomenon involves both the fact that Fourier sums overshoot at a jump discontinuity, and that this overshoot does not die out as the frequency increases.

Program:

```matlab
% Gibb's phenomenon.
clc;
clear all;
close all;
t=linspace(-2,2,2000);
u=linspace(-2,2,2000);
sq=[zeros(1,500),2*ones(1,1000),zeros(1,500)];
k=2;
N=[1,3,7,19,49,70];
for n=1:6;
an=[];
for m=1:N(n)
    an=[an,2*k*sin(m*pi/2)/(m*pi)];
end;
fN=k/2;
for m=1:N(n)
    fN=fN+an(m)*cos(m*pi*t/2);
end;
nq=int2str(N(n));
subplot(3,2,n),plot(u,sq,'r');hold on;
plot(t,fN); hold off; axis([-2 2 -0.5 2.5]);grid;
xlabel('Time'), ylabel('y_N(t)');title(['N= ',nq]);
end;
```
Result: In this experiment Gibbs phenomenons have been demonstrated using MATLAB.

Output:

VIVA QUESTIONS:--
1. Define Gibb’s Phenomenon?
2. What is the importance of Gibb’s Phenomenon?
3. What is Static and Dynamic System?
4. Define Fourier series?
5. What is Causality Condition of the Signal?
Experiment No-10
Finding the Fourier Transform of a given signal and plotting its magnitude and phase spectrum

**AIM:** To find the Fourier Transform of a given signal and plotting its magnitude and phase spectrum.

**Software Required:** Matlab software

**Theory:**

**Fourier Transform:**

The Fourier transform as follows. Suppose that \( f \) is a function which is zero outside of some interval \([-L/2, L/2]\). Then for any \( T \geq L \) we may expand \( f \) in a Fourier series on the interval \([-T/2, T/2]\), where the "amount" of the wave \( e^{2 \pi i n x / T} \) in the Fourier series of \( f \) is given by

By definition Fourier Transform of signal \( f(t) \) is defined as

\[
F(\omega) = \int_{-\infty}^{\infty} f(t) e^{-j\omega t} \, dt
\]

Inverse Fourier Transform of signal \( F(\omega) \) is defined as

\[
f(t) = \frac{1}{2\pi} \int_{-\infty}^{\infty} F(\omega) e^{j\omega t} \, d\omega
\]

**Program:**

clear all;
close all;
fs=1000;
N=1024;  \% length of fft sequence
t=[0:N-1]*(1/fs);
\% input signal
x=0.8*cos(2*pi*100*t);

subplot(3,1,1);
axis([0 0.05 -1 1]);
grid;
xlabel('t');
ylabel('amplitude');
title('input signal');
\% Fourier transform of given signal
x1=fft(x);
\% magnitude spectrum
k=0:N-1;
Xmag=abs(x1);
subplot(3,1,2);
plot(k,Xmag);
grid;
xlabel('t');
ylabel('amplitude');
title('magnitude of fft signal')

%phase spectrum
Xphase=angle(x1);
subplot(3,1,3);
plot(k,Xphase);
grid;
xlabel('t');
ylabel('angle');
title('phase of fft signal');

**Result:** Magnitude and phase spectrum of FFT of a given signal is plotted.

**Output:**
VIVA QUESTIONS:

1. Define convolution property of Fourier transform?
2. What are the properties of Continuous-Time Fourier transform?
3. What is the sufficient condition for the existence of F.T?
4. Define the F.T of a signal?
5. What is the difference b/w F.T & F.S?
Experiment No-11
Waveform Synthesis Using Laplace transforms

AIM: Finding the Laplace transform & Inverse Laplace transform of some signals.

Software Required: Matlab software

Theory:

Bilateral Laplace transforms:

The Laplace transform of a signal $f(t)$ can be defined as follows:

$$F(s) = \mathcal{L}\{f(t)\} = \int_{-\infty}^{\infty} e^{-st} f(t) \, dt.$$

Inverse Laplace transform

The inverse Laplace transform is given by the following formula:

$$f(t) = \mathcal{L}^{-1}\{F(s)\} = \frac{1}{2\pi i} \lim_{T \to \infty} \int_{-iT}^{iT} e^{st} F(s) \, ds,$$

Program:

```matlab
clc;
clear all;
close all;
%representation of symbolic variables
syms f t w s;
%laplace transform of t
f=t;
z=laplace(f);
disp('the laplace transform of f = ');
disp(z);

%f laplace transform of a signal
%fl=sin(w*t);
fl=-1.25+3.5*t*exp(-2*t)+1.25*exp(-2*t);
v=laplace(fl);
disp('the laplace transform of f1 = ');
disp(v);
%lv=simplify(v);
pretty(lv)
%inverse laplace transform
y1=ilaplace(z);
disp('the inverse laplace transform of z = ');
disp(y1);
```
\texttt{y2=ilaplace(v);} \\
\texttt{disp('the inverse laplace transform of } v = ')}; \\
\texttt{disp(y2);} \\
\texttt{ezplot(y1);} \\
\texttt{figure;} \\
\texttt{ezplot(y2)}

\textbf{Output:}

the laplace transform of \( f = \frac{1}{s^2} \)

the laplace transform of \( f1 = \frac{5}{4(s + 2)} + \frac{7}{2(s + 2)^2} - \frac{5}{4s} \) \\
\[ \frac{s - 5}{s(s + 2)^2} \]

the inverse laplace transform of \( z = t \)

the inverse laplace transform of \( v = \frac{5}{4 \exp(2t)} + \frac{(7t)}{2 \exp(2t)} - \frac{5}{4} \)

\textbf{Output:}
VIVA QUESTIONS:-

1. Define Laplace-Transform?
2. What is the Condition for Convergence of the L.T?
3. What is the Region of Convergence (ROC)?
4. State the Shifting property of L.T?
5. State convolution Property of L.T?
Experiment No-12
Locating Poles and Zeros in s-plane & z-plane

**AIM:** Write the program for locating poles and zeros and plotting pole-zero maps in s-plane and z-plane for the given transfer function.

**Software Required:** Matlab software

**Theory:**

**Z-transforms**
The Z-transform, like many other integral transforms, can be defined as either a *one-sided* or *two-sided* transform.

**Bilateral Z-transform**

The *bilateral* or *two-sided* Z-transform of a discrete-time signal \( x[n] \) is the function \( X(z) \) defined as

\[
X(z) = \mathcal{Z} \{ x[n] \} = \sum_{n=-\infty}^{\infty} x[n] z^{-n}
\]

**Unilateral Z-transform**

Alternatively, in cases where \( x[n] \) is defined only for \( n \geq 0 \), the *single-sided* or *unilateral* Z-transform is defined as

\[
X(z) = \mathcal{Z} \{ x[n] \} = \sum_{n=0}^{\infty} x[n] z^{-n}
\]

In signal processing, this definition is used when the signal is causal.

where \( z = r e^{j\omega} \)

\[
X(z) = \frac{P(z)}{Q(z)}
\]

The roots of the equation \( P(z) = 0 \) correspond to the 'zeros' of \( X(z) \)
The roots of the equation \( Q(z) = 0 \) correspond to the 'poles' of \( X(z) \)

**Example:**

The zeros are: \( \{ -1 \} \)

\[
H(z) = \frac{z + 1}{(z - \frac{1}{2})(z + \frac{3}{4})}
\]

The poles are: \( \left\{ \frac{1}{2}, -\frac{3}{4} \right\} \)

49
Program:

clc;
clear all;
close all;
%enter the numerator and denominator coefficients in square brackets
num=input('enter numerator co-efficients');
den=input('enter denominator co-efficients');

% find poles and zeros
poles=roots(den)
zeros=roots(num)

% find transfer function H(s)
h=tf(num,den);

% plot the pole-zero map in s-plane
sgrid;
pzmap(h);
grid on;
title('locating poles and zeros on s-plane');

%plot the pole zero map in z-plane
figure
zplane(poles,zeros);
grid on;
title('locating poles and zeros on z-plane');

Result: Pole-zero maps are plotted in s-plane and z-plane for the given transfer function.

Output:
enter numerator co-efficients[1 -1 4 3.5]
enter denominator co-efficients[2 3 -2.5 6]

poles =

-2.4874
0.4937 + 0.9810i
0.4937 - 0.9810i

zeros =

0.8402 + 2.1065i
0.8402 - 2.1065i
-0.6805
VIVA QUESTIONS:-

1. Study the details of pzmap() and zplane() functions?
2. What are poles and zeros?
3. How you specify the stability based on poles and zeros?
4. Define S-plane and Z-plane?
5. Define transfer function of the system?
Experiment No-13
Generation of Gaussian Noise

AIM: Write the program for generation of Gaussian noise and computation of its mean, mean square value, standard deviation, variance, and skewness.

Software Required: Matlab software

Theory:

Gaussian noise is statistical noise that has a probability density function (abbreviated pdf) of the normal distribution (also known as Gaussian distribution). In other words, the values the noise can take on are Gaussian-distributed. It is most commonly used as additive white noise to yield additive white Gaussian noise (AWGN). Gaussian noise is properly defined as the noise with a Gaussian amplitude distribution. says nothing of the correlation of the noise in time or of the spectral density of the noise. Labeling Gaussian noise as 'white' describes the correlation of the noise. It is necessary to use the term "white Gaussian noise" to be correct. Gaussian noise is sometimes misunderstood to be white Gaussian noise, but this is not the case.

Program:

clc;
clear all;
close all;

%generates a set of 2000 samples of Gaussian distributed random numbers
x=randn(1,2000);
%plot the joint distribution of both the sets using dot.
subplot(211)
pplot(x,'.');
title('scatter plot of gaussian distributed random numbers');

ymu=mean(x)
ymsq=sum(x.^2)/length(x)
ysigma=std(x)
yvar=var(x)
yskew=skewness(x)
p=normpdf(x,ymu,ysigma);
subplot(212);
stem(x,p);
title(' gaussian distribution');

Output:

ymu = 0.0403

ymsq = 0.9727
ysigma = 0.9859

yvar = 0.9720

yskew = 0.0049

**VIVA QUESTIONS:**
1. What is a noise and how many types of noises are there?
2. What is Gaussian noise?
3. Define variance of random variable?
4. Define standard deviation of random variable?
5. How to define pdf of a Gaussian random variable?
Experiment No-14
Sampling theorem verification

**AIM:** Verify the sampling theorem.

**Software Required:** Matlab software

**Theory:**

Sampling Theorem:

A bandlimited signal can be reconstructed exactly if it is sampled at a rate atleast twice the maximum frequency component in it." Figure 1 shows a signal g(t) that is bandlimited.

![Figure 1: Spectrum of band limited signal g(t)](image)

The maximum frequency component of g(t) is fm. To recover the signal g(t) exactly from its samples it has to be sampled at a rate $fs \geq 2fm$.

The minimum required sampling rate $fs = 2fm$ is called 'Nyquist rate'.

**Proof:** Let g(t) be a bandlimited signal whose bandwidth is fm ($\omega_m = 2\pi fm$).

![Figure 2: (a) Original signal g(t) (b) Spectrum G(\omega)](image)

$\delta(t)$ is the sampling signal with $fs = 1/T > 2fm$.

![Figure 3: (a) sampling signal $\delta(t)$ (b) Spectrum $\delta(\omega)$](image)
Figure 4: (a) sampled signal $g_s(t)$ (b) Spectrum $G_s(w)$

To recover the original signal $G(w)$:
1. Filter with a Gate function, $H_{2w_m}(w)$ of width $2w_m$
2. Scale it by $T$.

Figure 5: Recovery of signal by filtering with a filter of width $2w_m$ Aliasing $w_s < 2w_m$.

Aliasing leads to distortion in recovered signal. This is the reason why sampling frequency should be at least twice the bandwidth of the signal. Oversampling $w_s > 2w_m$. This condition avoids aliasing.

Figure 6: Aliasing due to inadequate sampling

Figure 7: Oversampled signal avoids aliasing
Program:

4. What is under sampling?
5. What is over sampling?
EXP.No:15

REMOVAL OF NOISE BY AUTO CORRELATION/CROSS CORRELATION

**AIM:** Write the program for Removal of noise by using auto correlation.

**Software Required:** Matlab software

**Theory:**

Detection of a periodic signal masked by random noise is of great importance. The noise signal encountered in practice is a signal with random amplitude variations. A signal is uncorrelated with any periodic signal. If $s(t)$ is a periodic signal and $n(t)$ is a noise signal then

$$\lim_{T \to \infty} \frac{1}{T} \int_{-T/2}^{T/2} s(t)n(t-T) \, dt = 0 \quad \text{for all } T$$

$Q_{sn}(T)=\text{cross correlation function of } s(t) \text{ and } n(t)$ Then $Q_{sn}(T)=0$

**Detection of noise by Auto-Correlation:**

$S(t)=$Periodic Signal (Transmitted), mixed with a noise signal $n(t)$.

Then $f(t)$ is received signal is $[s(t) + n(t)]$

Let $Q_{ff}(T) =$Auto Correlation Function of $f(t)$

$Q_{ss}(t) =$ Auto Correlation Function of $S(t)$

$Q_{nn}(T) =$ Auto Correlation Function of $n(t)$

$$Q_{ff}(T)= \lim_{T \to \infty} \frac{1}{T} \int_{-T/2}^{T/2} f(t)f(t-T) \, dt$$

$$= \lim_{T \to \infty} \frac{1}{T} \int_{-T/2}^{T/2} [s(t)+n(t)] [s(t-T)+n(t-T)] \, dt$$

$$=Q_{ss}(T)+Q_{nn}(T)+Q_{sn}(T)+Q_{ns}(T)$$

The periodic signal $s(t)$ and noise signal $n(t)$ are uncorrelated

$Q_{sn}(t)=Q_{ns}(t)=0$

Then $Q_{ff}(t)=Q_{ss}(t)+Q_{nn}(t)$
The auto correlation function of a periodic signal is periodic of the same frequency and the auto correlation function of a non periodic signal is tends to zero for large value of T since s(t) is a periodic signal and n(t) is non periodic signal so $Q_{ss}(T)$ is a periodic where as $aQ_{nn}(T)$ becomes small for large values of T Therefore for sufficiently large values of T $Q_{ff}(T)$ is equal to $Q_{ss}(T)$.

**Program:**
```matlab
clc;
clear all;
close all;
t=0:0.2:pi*8;
%input signal
s=sin(t);
subplot(6,1,1);
plot(s);
title('signal s');
xlabel('t');
ylabel('amplitude');
%generating noise
n = randn([1 126]);
%noisy signal
f=s+n;
subplot(6,1,2)
plot(f);
title('signal f=s+n');
xlabel('t');
ylabel('amplitude');
%auto correlation of input signal
as=xcorr(s,s);
subplot(6,1,3);
plot(as);
title('auto correlation of s');
xlabel('t');
ylabel('amplitude');
%auto correlation of noise signal
an=xcorr(n,n);
subplot(6,1,4)
plot(an);
title('auto correlation of n');
xlabel('t');
ylabel('amplitude');
%cocorrelation of transmitted signal
cff=xcorr(f,f);
```
subplot(6,1,5)
plot(cff);
title('auto correlation of f');
xlabel('t');
ylabel('amplitude');

% autocorrelation of received signal
hh=as+an;
subplot(6,1,6)
plot(hh);
title('addition of as+an');
xlabel('t');
ylabel('amplitude');

**Result**: Removal of noise using autocorrelation is performed.

**Output:**
VIVA QUESTIONS:-

1. Define Auto correlation function?
2. What are the Different types of noise signals?
3. Define cross correlation function?
4. What is Signum function?
5. What is Static and Dynamic System?
EXP.No:16
EXTRACTION OF PERIODIC SIGNAL MASKED BY NOISE USING CORRELATION

AIM: Write the program for extraction of periodic signal using correlation.

Software Required: Matlab software

Theory:
A signal is masked by noise can be detected either by correlation techniques or by filtering. Actually, the two techniques are equivalent. The correlation technique is a measure of extraction of a given signal in the time domain whereas filtering achieves exactly the same results in frequency domain.

Program:
clear all;
close all;
clc;
t=0:0.1: pi*4;
%sinput signal1
s=sin(t);
subplot(7,1,1)
plot(s);
title('signal s');
xlabel('t');
ylabel('amplitude');

%sinput signal2
c=cos(t);
subplot(7,1,2)
plot(c);
title('signal c');
xlabel('t');
ylabel('amplitude');

%generating noise signal
n = randn([1 126]);
%f=s+n;
subplot(7,1,3);
plot(f);
title('signal f=s+n');
xlabel('t');
ylabel('amplitude');

% crosscorrelation of signal1 & signal2
asc=xcorr(s,c);
subplot(7,1,4)
plot(asc);
title('correlation of s and c');
xlabel('t');
ylabel('amplitude');
% crosscorrelation of noise & signal2
anc=xcorr(n,c);
subplot(7,1,5)
plot(anc);
title('correlation of n and c');
xlabel('t');
ylabel('amplitude');
% crosscorrelation of f & signal2
cfc=xcorr(f,c);
subplot(7,1,6)
plot(cfc);
title('correlation of f and c');
xlabel('t');
ylabel('amplitude');
% extracting periodic signal
hh=asc+anc;
subplot(7,1,7)
plot(hh);
title('addition of sc+nc');
xlabel('t');
ylabel('amplitude');

Result: Periodic signal is extracted by using correlation.
Output:
VIVA QUESTIONS:-
1. State the relationship between PSD and ACF?
2. Define Auto correlation function of a signal?
3. Define cross correlation function of a signal
4. Define PSD?
5. Define Hilbert transforms?
AIM: Verification of wiener-khinchin relation

Software Required: Matlab software

Theory:
The wiener-khinchin theorem states that the power spectral density of a wide sense stationary random process is the fourier transform of the corresponding autocorrelation function.

\[ \text{PSD} = S_{XX}(\omega) = \mathcal{F}[R_{XX}(\tau)] = \int_{-\infty}^{\infty} R_{XX}(\tau) e^{-j\omega \tau} d\tau \]

\[ \text{ACF} = R_{XX}(\tau) = \mathcal{F}^{-1}[S_{XX}(\omega)] = \frac{1}{2\pi} \int_{-\infty}^{\infty} S_{XX}(\omega) e^{j\omega \tau} d\omega \]

Program:

clc;
clear all;
close all;
t=0:0.1:2*pi;
%input signal
x=sin(2*t);
subplot(3,1,1);
plot(x);
xlabel('time');
ylabel('amplitude');
title('input signal');
%autocorrelation of input signal
xu=xcorr(x,x);
%fft of autocorrelation signal
y = fft(xu);
subplot(3,1,2);
plot(abs(y));
xlabel('f');
ylabel('amplitude');
title('fft of autocorrelation of input signal');
%fourier transform of input signal
y1=fft(x);
%finding the power spectral density
y2=(abs(y1)).^2;
subplot(3,1,3);
plot(y2);
xlabel('f');
ylabel('magnitude');
title('PSD of input signal');

Result: wiener-khinchin relation is verified.

Output:

VIVA QUESTIONS:-
1. What is mean wiener-khinchine relation?
2. Define Fourier transform and its inverse?
3. What is the difference b/w convolution and correlation?
4. What is the importance of power spectrum?
5. What is the importance of correlation?
