

JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD IV Year B.Tech. CSE- II Sem MANAGEMENT SCIENCE

Objectives:

This course is intended to familiarise the students with the framework for the managers and leaders availbale for understanding and making decisions realting to issues related organizational structure, production operations, marketing, Human resource Management, product management and strategy.

UNIT - I:

Introduction to Management and Organisation: Concepts of Management and organization- nature, importance and Functions of Management, Systems Approach to Management - Taylor's Scientific Management Theory- Fayal's Principles of Management- Maslow's theory of Hierarchy of Human Needs- Douglas McGregor's Theory X and Theory Y - Hertzberg Two Factor Theory of Motivation - Leadership Styles, Social responsibilities of Management, Designing Organisational Structures: Basic concepts related to Organisation - Departmentation and Decentralisation, Types and Evaluation of mechanistic and organic structures of organisation and suitability.

UNIT - II:

Operations and Marketing Management: Principles and Types of Plant Layout-Methods of Production(Job, batch and Mass Production), Work Study - Basic procedure involved in Method Study and Work Measurement - Business Process Reengineering(BPR) - Statistical Quality Control: control charts for Variables and Attributes (simple Problems) and Acceptance Sampling, TQM, Six Sigma, Deming's contribution to quality, Objectives of Inventory control, EOQ, ABC Analysis, Purchase Procedure, Stores Management and Store Records - JIT System, Supply Chain Management, Functions of Marketing, Marketing Mix, and Marketing Strategies based on Prodcut Life Cycle, Channels of distribution.

UNIT - III:

Human Resources Management(HRM): Concepts of HRM, HRD and Personnel Management and Industrial Relations (PMIR), HRM vs PMIR, Basic functions of HR Manager: Manpower planning, Recruitment, Selection, Training and Development, Plcement, Wage and Salary Administration, Promotion, Transfer, Seperation, Performance Appraisal, Grievance Handling and Welfare Administration, Job Evaluation and Merit Rating - Capability Maturity Model (CMM) Levels - Performance Management System.

UNIT - IV:

Project Management (PERT/ CPM): Network Analysis, Programme Evaluation and Review Technique (PERT), Critical Path Method (CPM), Identifying critical path, Probability of Completing the project within given time, Project Cost Analysis, Project Crashing (simple problems).

UNIT - V:

Strategic Management and Contemporary Strategic Issues: Mission, Goals, Objectives, Policy, Strategy, Programmes, Elements of Corporate Planning Process, Environmental Scanning, Value Chain Analysis, SWOT Analysis, Steps in Strategy Formulation and Implementation, Generic Strategy alternatives. Bench Marking and Balanced Score Card as Contemporary Business Strategies.

UNIT I INTRODUCTION TO MANAGEMENT

INTRODUCTION

In the present context, managing has become one of the most important areas of human activity because of increasing role of large and complex organisations in the society. Because of their increasing role, the organisations have attracted the attention of both practitioners and academicians to find out the solutions for business problems.

Concept

Defining the term management precisely is not so simple because the term management is used in a variety of ways. Being a new discipline, it has drawn concepts and principles from a number of disciplines such as economics, sociology, psychology, anthropology, and statistics and so on.

Each group of contributors has treated management differently. For example, economists have treated management as a factor of production; sociologists have treated it as a class or group of persons; practitioners have treated it as a process comprising different activities.

DEFINITION

- —Management is the art of getting things done through and with people in formally organized groups —— Koontz
- —Management is the art of knowing what you want to do and then seeing that it is done in the best and cheapest way $\| -\mathbf{F.W. Taylor} \|$
- —Management is the art of securing maximum results with minimum effort so as to secure maximum prosperity and happiness for both employer and employee and give the public the best possible service —— John Mee.
- Management is the accomplishment of results through the efforts of other people Lawrence
- —Management is simply the process of decision making and control over the action of human beings for the expressed purpose of attaining pre-determined goals **Stanley V.**

Management is a process involving planning, organizing, staffing, directing and controlling human efforts to achieve stated objectives in an organization. I

From the above definitions, the following **features** are identified: -

1) **Organised Activities**: Management is a process of organizedactivities. Without organized activities, two groups of people cannot be involved in the

performance of activities. Where a group of people are involved in working towards a common objective, management comes into existence.

- 2) Existence of objectives: The existence of objectives is a basiccriterion of e very human organization because all organizations are deliberate and purposive creation and, therefore, they should have some objectives. Without objectives, it becomes difficult to define the direction where organized group of activities would lead to.
- 3) **Relationship among resources**: Organised activities meant toachieve common goals are brought about to establish certain relationships about the available resources. Resources include money, machine, material, men and methods. All these resources are made available to those who manage the organization. Managers apply knowledge, experience, principles for getting the desired results. Thus, the essence of management is integration of various organisational resources.
- 4) **Working with and through people**: Management involves workingwith people and getting organisational objectives achieved through them. The idea of working through people is interpreted in terms of assigning and reassigning of activities to subordinates.
- 5) **Decision Making**: Management process involves decision making atvarious levels for getting things done through people. Decision making basically involves selecting the most appropriate alternative out of the several. If there is only one alternative, there is no question of decision making.

Nature of Management: - The study and application of managementtechniques in managing the affairs of the organization have changed its nature over a period of time. The following points will describe the nature of management

- 1) **Multidisciplinary**: Management has been developed as a separatediscipline, but it draws knowledge and concepts from various disciplines like psychology, sociology, anthropology, economics, statistics, operations research etc.,. Management integrates the idea nd concepts taken from these disciplines and presents newer concepts which can be put into practice for managing the organisations
- 2) **Dynamic nature of Principles**: Principle is a fundamental truthwhich establishes cause and effect relationships of a function. Based on integration and supported by practical evidences, management has framed certain principles. However, these principles are flexible in nature and change with the changes in the environment in which an organization exists.
- 3) **Relative, Not absolute Principles**: Management principles are relative, not absolute, and they should be applied according to the need of the organization. Each organization may be different from others. The difference may exist because of time, place, socio-cultural factors, etc.,.
- 4) **Management: Science or Art**: There is a controversy whethermanagement is science or art.
 - An **art** is personal skill of business affairs. Art is characterized by practical knowledge, personal creativity and skill. The more one practices an art, the more professional one becomes. Management can be considered as an art because it satisfies all these criterion of an art. A **science** is a systematized body of knowledge of facts. It can establish cause-and-effect relationships

- among various factors. It involves basic principles, which are capable of universal application. Management can be considered as science because it satisfies all these criterion of a science.
- 5) **Management as profession**: Management has been regarded as a profession by many while many have suggested that it has not achieved the status of a profession.
 - Profession refers to a vocation or a branch of advanced learning such as engineering or medicine.
- 6) **Universality of management**: Management is a universalphenomenon. However, management principles are not universally applicable but are to be modified according to the needs of the situation.

Importance of Management

Management has been important to the daily lives of people and to the organizations. The importance of management may be traces with the following.

- 1) **Effective utilization of Resources**: Management tries to makeeffective utilization of various resources. The resources are scarce in nature and to meet the demand of the society, their contribution should be more for the general interests of the society.
 - Management not only decides in which particular alternative a particular resource should be used, but also takes actions to utilize it in that particular alternative in the best way.
- 2) **Development of Resources**: Management develops various resources. This is true with human as well as non-human factors. Most of the researchers for resource development are carried on in an organized way and management is involved in these organized activities.
- 3) It ensures continuity in the organization: Continuity is veryimportant in the organisations. Where there are no proper guidelines for decision making continuity can not be guaranteed. It is quite natural that new people join while some others retire or leave the organization. It is only management that keeps the organization continuing.
- 4) **Integrating various interest groups**: In the organized efforts, there are various interest groups and they put pressure over other groups for maximum share in the combined output. For example, in case of a business organization, there are various pressure groups such as shareholders, employees, govt. etc. these interest groups have pressure on an organization. Management has to balance these pressures from various interest groups.
- 5) **Stability in the society**: Management provides stability in the societyby changing and modifying the resources in accordance with the changing environment of the society. In the modern age, more emphasis is on new inventions for the betterment of human beings. These inventions make old systems and factors mostly obsolete and inefficient. Management provides integration between traditions and new inventions, and safeguards society from the unfavorable impact of these inventions so that continuity in social process is maintained.

Generally, the scope of management hovers around the following functional areas

- 1. production management
- 2. Marketing management
- 3. financial management
- 4. personal management

Production management

production means creation of utilities by converting raw material into final product by various scientific methods and regulations. It is very important field of management. Various sub-areas of the production department are as follows.

- •Plant lay out and location: this area deals with designing of plant layout, decide about the plant location for various products and providing various plant utilities
- •Production planning: Managers have to plan about various production policies and production methods.
- •Material management: this area deals with purchase, storage, issue and control of the material required for production department.
- •Research and Development: this area deals with research and developmental activities of manufacturing department. Refinement in existing product line or develop a new product are the major activities.
- •Quality Control: quality control department works for production of quality product by doing various tests which ensure the customer satisfaction.

Marketing management

Marketing management involves distribution of the product to the buyers. It may need number of steps. 3ub areas are as follows

- •Advertising: this area deals with advertising of product, introducing new product in market by various means and encourage the customer to buy these products.
- •Sales management: sales management deals with fixation of prices, actual transfer of products to the customer after fulfilling certain formalities and after sales services.
- •Market research: It involves in collection of data related to product demand and performance by research and analysis of market.

Finance and accounting management

Financial and accounting management deals with managerial activities related to procurement and utilization of fund for business purpose. Its sub areas are as follows

- •Financial accounting: It relates to record keeping of various financial transactions, their classification and preparation of financial statements to show the financial position of the organization.
- •Management accounting: It deals with analysis and interpretation of financial record so that management can take certain decisions on investment plans, return to investors and dividend policy
- •Taxation: this area deals with various direct and indirect taxes which an organization has to pay.
- •Costing: costing deals with recording of costs, their classification, and analysis and cost control.

Personnel Management

Personnel management is the phase of management which deals with effective use and control of management. Following are the sub areas of personnel management

- •Personnel planning: this deals with preparation inventory of available manpower and actual requirement of workers in organization.
- •Recruitment and selection: this deals with hiring and employing human being for various positions as required. ;
- •Training and development: training and development deals with process of making the employees more efficient and effective by arranging training programmes. It helps in making team of competent employees which work for growth of an organization.
- •wage administration: It deals in Job evaluation, merit rating of Jobs and making wage and incentive policy for employees.
- •Industrial relation: It deals with maintenance of overall employee relation,

Functions of Management:-

To achieve the organisational objectives managers at all levels of organization should perform different functions. A function is a group of similar activities.

The list of management functions varies from author to author with the number of functions varying from three to eight.

Writers	Management Functions		
Henry Fayol	Planning,	Organizing,	Commanding,
	Coordinating, Controlling		
Luther Gullick	POSDCORD- Planning, Organising, Staffing,		
	Directing, Co	oordinating, Repor	ting, Directing
R. Davis	Planning , Organising, Controlling		
	Planning,	Organising,	Motivating,

E.F.L. Breech	Coordinating, Controlling			
	Planning, Controlling	Organising,	Staffing,	Leading,

Different authors presented different variations. By combining some of functions, these are broadly grouped into Planning, Organising, Staffing, Directing, and Controlling.

- 1) **Planning**: Planning is the conscious determination of future course ofaction. This involves why an action, what action, how to take action, and when to take action. Thus, planning includes determination of specific objectives, determining projects and programs, setting policies and strategies, setting rules and procedures and preparing budgets.
- 2) Organising: Organising is the process of dividing work intoconvenient tasks or duties, grouping of such duties in the form of positions, grouping of various positions into departments and sections, assigning duties to individual positions, and delegating authority to each positions so that the work is carried out as planned. It is viewed as a bridge connecting the conceptual idea developed in creating and planning to the specific means for accomplishment these ideas.
- 3) **Staffing**: Staffing involves manning the various positions created bythe organizing process. It includes preparing inventory of personal available and identifying the sources of people, selecting people, training and developing them, fixing financial compensation, appraising them periodically etc.
- 4) **Directing**: when people are available in the organization, they mustknow what they are expected to do in the organization. Superior managers fulfill this requirement by communicating to subordinates about their expected behavior. Once subordinates are oriented, the superiors have continuous responsibility of guiding and leading them for better work performance and motivating them to work with zeal and enthusiasm. Thus, directing includes communicating, motivating and leading.

Controlling: Controlling involves identification of actual results, comparison of actual results with expected results as set by planning process, identification of deviations between the two, if any, and taking of corrective action so that actual results match with expected results.

LEVELS OF MANAGEMENT

1. Top Level of Management

It consists of board of directors, chief executive or managing director. The top management is the ultimate source of authority and it manages goals and policies for an enterprise. It devotes more time on planning and coordinating functions.

The role of the top management can be summarized as follows -

- Top management lays down the objectives and broad policies of the enterprise.
- It issues necessary instructions for preparation of department budgets, procedures, schedules etc.

- It prepares strategic plans & policies for the enterprise.
- It appoints the executive for middle level i.e. departmental managers.
- It controls & coordinates the activities of all the departments.
- It is also responsible for maintaining a contact with the outside world.
- It provides guidance and direction.
- The top management is also responsible towards the shareholders for the performance of the enterprise.

2. Middle Level of Management

The branch managers and departmental managers constitute middle level. They are responsible to the top management for the functioning of their department. They devote more time to organizational and directional functions. In small organization, there is only one layer of middle level of management but in big enterprises, there may be senior and junior middle level management. Their role can be emphasized as

- They execute the plans of the organization in accordance with the policies and directives of the top management.
- o They make plans for the sub-units of the organization.
- o They participate in employment & training of lower level management.
- They interpret and explain policies from top level management to lower level.
- They are responsible for coordinating the activities within the division or department.
- It also sends important reports and other important data to top level management.
- They evaluate performance of junior managers.
- They are also responsible for inspiring lower level managers towards better performance

3. **Lower Level of Management**

Lower level is also known as supervisory / operative level of management. It consists of supervisors, foreman, section officers, superintendent etc. According to *R.C. Davis*, "Supervisory management refers to those executives whose work has to be largely with personal oversight and direction of operative employees". In other words, they are concerned with direction and controlling function of management. Their activities include -

Assigning of jobs and tasks to various workers.

- They guide and instruct workers for day to day activities.
- They are responsible for the quality as well as quantity of production.
- They are also entrusted with the responsibility of maintaining good relation in the organization.
- They communicate workers problems, suggestions, and recommendatory appeals etc to the higher level and higher level goals and objectives to the workers.
- They help to solve the grievances of the workers.
- They supervise & guide the sub-ordinates.
- They are responsible for providing training to the workers.
- They arrange necessary materials, machines, tools etc for getting the things done.
- They prepare periodical reports about the performance of the workers.
- They ensure discipline in the enterprise.

- They motivate workers.
- They are the image builders of the enterprise because they are in direct contact with the workers.

FAYOL'S ADMNISTRATIVE MANAGEMENT

Henry Fayol is a French Industrialist and the father of modern operational management theory. Fayol recognized the following organizational activities.

GENERAL PRINCIPLES OF MANAGEMENT:

Fayol has given 14 principles of management. He has made distinction between management principles and management elements. While management principles is a fundamental truth and establishes cause effect relationship, elements of management denotes the function performed by a manager.

While giving the management principles, Fayol has emphasized two things.

- 1. the list of management principles is not exhaustive but suggestive and has discussed only those principles which he followed on most occasions.
- 2. principles of management are not rigid but flexible

Principles:-

- 1. **Division of work**: It is helpful to take the advantage of specialization. Here, the work is divided among the members of the group based on the employees skills and talents. It can be applied at all levels of the organization.
- 2. **Authority and Responsibility**: Fayol finds authority as a continuation ofofficial and personal factors. Official authority is derived from the manager's position and personal authority is derived from personal qualities such as intelligence, experience, moral worth, past services, etc., Responsibility arises out of assignment of activity. In order to discharge the responsibility properly, there should be parity between authority and responsibility.
- 3. **Discipline**: All the personal serving in an organization should be disciplined. Discipline is obedience, application, behavior and outward mark of respect shown by employees.
- 4. **Unity of Command**: Unity of command means that a person should getorders from only one superior. Fayol has considered unity of command as an important aspect in managing an organization. He says that —should it be violated, authority is undermined, discipline is in jeopardy, order disturbed, and stability threatened.
- 5. **Unity of Direction:** According to this principle, each group of activities with the same objective must have one head and one plan. It is concerned with functioning of the organization I respect of grouping of activities or planning. Unity of direction provides better coordination among various activities to be undertaken by an organization.
- 6. **Subordination of individual interest to general interest**: Individualinterest must be subordinate to general interest when there is conflict between the two. However factors like ambition, laziness, weakness, etc., tend to reduce the importance of general interest. Therefore, superiors should set an example in fairness and goodness.
- 7. **Remuneration to Personnel**: Remuneration to employees should befair and provide maximum possible satisfaction to employees and employers. Fayol did not favor profit sharing plan for workers but advocated it for managers. He was also in favor of non-financial benefits.
- 8. **Centralization**: Everything which goes to increase the importance ofsubordinate's role is decentralization; every thing which goes to reduce itis centralization. The degree of centralization or decentralization is determined by the needs of the company.
- 9. Scalar Chain: There should be a scalar chain of authority and ofcommunication ranging from the highest to the lowest. It suggests that each communication going up or coming down must flow through each position in the line of authority. It can be short-circuited only in special circumstances. For this purpose, Fayol has suggested _gang plank'
- 10. **Order:** This is a principle relating to the arrangement of things andpeople. In material order, there should be a place for everything and everything should be in

its place. Similarly, in social order, there should be the right man in the right place.

- 11. **Equity:** Equity is the combination of justice and kindness. Equity intreatment and behavior is liked by everyone and it brings loyalty in the organization. The application of equity requires good sense, experience and good nature.
- 12. **Stability of tenure:** No employee should be removed within shorttime. There should be reasonable security of jobs. Stability of tenure is essential to get an employee accustomed to new work and succeeding in doing it well
- 13. **Initiative:** Within the limits of authority and discipline, managersshould encourage their employees for taking initiative. Initiative is concerned with thinking out and execution of a plan. Initiative increases zeal and energy on the part of human beings.
- 14. **Esprit de corps:** It is the principle of _union is strength' and extensionof unity of command for establishing team work. The manager should encourage esprit de corps among his employees.

Hawthorne experiments and human relations:

The human relations approach was born out of a reaction to classical approach. A lot of literature on human relations has been developed. For the irst time, an intensive and systematic analysis of human factor in organisations was made in the form of Hawthorne experiments.

To investigate the relationship between productivity and physical working conditions, a team of four members Elton mayo, White head, Roethlisberger and William Dickson was introduced by the company in Hawthorne plant. They conducted various researches in four phases with each phase attempting to answer the question raised at the previous phase. The phases are ---

- 1. Experiments to determine the effects of changes in illuminations on productivity. Illumination experiments (1924-27)
- 2. Experiments to determine the effects of changes in hours and other working conditions on productivity. (Relay assembly test room experiments 1927-28)
- 3. mass interviewing programme (1928-1930)
- 4. determination and analysis of social organization at work (Bank wiring observation room experiments 1931-32)

Conclusions:

Individual workers must be seen as members of a group
The sense of belongingness and effective management were the two
secrets unfolded by the Hawthorne experiments.
Informal or personal groups influenced the behaviour of workers on the
job.
Need for status and belongingness to a group were viewed as more
important than monetary incentives or good physical working conditions

To seek workers cooperation, the management should be aware of their
social needs and cater to them. Otherwise, there is every danger that the
workers ignore and turn against the interests of the organisation.

HERZBERG'S MOTIVATION - HYGIENE THEORY:

Frederick Hertzberg conducted a structured interview programme to analyse the experience and feelings of 200 engineers and accountants in nine different companies in Pittsburg area, U.S.A during the structured interview, they were asked to describe a few previous job experiences in which they felt _exceptionally good` or exceptionally bad about jobs.

In his analysis, he found that there are some job conditions which operate primarily to dissatisfy employees when the conditions are absent, however their presence does not motivate them in a strong way. Another set

f job conditions operates primarily to build strong motivation and high job satisfaction, but their absence rarely proves strongly dissatisfying.

The first set of job conditions has been referred to as maintenance or hygiene factors and second set of job conditions as motivational factors.

Hygiene Factors:

According to Hertzberg, there are 10 maintenance factors. These are company policy and administration, technical supervision, salary, job security, personal life, status, working conditions, interpersonal relationship with superiors, interpersonal relationship with peers and interpersonal relationship with subordinates.

These maintenance factors are necessary to maintain at a reasonable level of satisfaction in employees. Any increase beyond this level will not produce any satisfaction to the employees: however, any cut below this level will dissatisfy them.

Motivational Factors:

These factors are capable of having a positive effect on job satisfaction often resulting in an increase in ones total output. Hertzberg includes six factors that motivate employees. These are achievement, recognition, advancement; work itself, possibility of growth and responsibility.

Most of the above factors are related with job contents. An increase in these factors will satisfy the employees: however, any decrease in these factors will not affect their level of satisfaction. Since, these increased level of satisfaction in the employees, can be used in motivating them for higher output.

Relations Movement:

Human relations movement refers to the researchers of organizational development who study the behavior of people in groups, in particular workplace groups and other related concepts in fields such as industrial andorganizational psychology. It originated in the 1930s' Hawthorne studies, which examined the effects of social relations, motivation and employeesatisfaction on factory productivity. The movement viewed workers in terms of their psychology and fit with companies, rather than as interchangeableparts, and it resulted in the creation of the discipline of human resourcemanagement.

System Theory:

A system is a set of interrelated but separate parts working towards a common purpose. The arrangement of elements must be orderly and there must be proper communication facilitating interaction between the elements and finally this interaction should lead to achieve a common goal. Churchman west is one of the pioneers of system approach of management. Systems-oriented managers would make decision only after they have identified impact of these decisions on a other department and the entire organization.

The essence of the system approach is that each manager cannot function in isolated and within his organizational boundary of authority and responsibility of the traditional organizational chart. They must interlink their departments with the total organization and communicate with all other departments and employees and also with other organizations. Many of the concepts of general systems theory are finding their way into the language of management. Managers need to be familiar with the systems vocabulary so they can keep pace with current development:

- 1) **Sub-System:** The parts that make up the whole of a system are calledsub-systems. And each system in turn may be a sub-system of a still larger whole. Thus a department is a sub-system of a plant, which may be a sub-system a company, which may be a sub-system of a conglomerate or an industry, which is a sub-system of the national economy, which is a sub-system of the world system.
- 2) **Synergy:** This means that the whole is greater than the sum of its parts.In organizational terms, synergy means that as separate departments within an organization cooperate and interact, they become more department than if each were to act in isolation. For Example, in a small firm, it is more efficient for each department to deal with one finance department than for each department to have a separate finance department of its own.
- 3) **Open and closed system:** A system is considered an open system if itinteracts with its environment; it is considered a closed system if it does not. All organization interacts with their environment, but the extent to which they do so varies. For Example, an automobile plant is far more open system than a monastery or prison.
- 4) **System Boundary:** Each system has a boundary that separates it fromits environment. In a closed system, the system boundary is rigid; in an open system, the boundary is more flexible. The system boundaries of many organizations have become increasingly flexible in recent years. For Example, managers at oil companies wishing to engage in offshore drilling nor must consider public concern for the environment. A trend is that American communities are demanding more and more environment responsibility from companies. For Example, Santa Rosa, California, a city of 1, 25,000 treats environment violations such as —off-gassing a waste product, i.e., allowing it to evaporate into the atmosphere, as a potential criminal offence.
- 5) **Flow:** A system has flows of information, materials and energy (includinghuman energy). These enter the system from the environment as inputs
- e.g., raw materials) undergo transformation processes within the system (operations that alter them) and exit system as outputs (goods and service).
- 6) **Feedback:** This is the key to system controls. As operations of thesystem proceed, information is fed back to the appropriate people and perhaps to a computer, so that the work can be assessed and if necessary, corrected. For Example, when Aluminum Company of America began feeding production data back

to the factory floor, workers in the Add, Washington, Magnesium plant quickly observed ways to improve operations, boosting productivity by 72%. Systems theory calls attention to the dynamic and interrelated nature of organization and the management task. Thus, it provides a framework within which one can plan actions and anticipate both immediate and far-reaching consequences, while allowing understanding unanticipated consequences as they develop. With a systems perspective, general managers can more easily maintain a balance between the needs of the various parts of the enterprise and the needs goals of the whole firm. —It depends is an appropriate response to the important questions in management as well. Management theory attempts to determine the predictable relationship between situations, actions and outcomes. So it is not surprising that a recent approach seeks to integrate the various schools of management thought by focusing on the interdependence of the many factors involved in the managerial situation.

Contingency Theory:

The contingency approach to management holds that management techniques should be dependent upon the circumstances. In this lesson, you will learn what the contingency approach to management is and the key elements of contingency management.

Definition: A contingency approach to management is based on the theorythat management effectiveness is contingent, or dependent, upon the interplay between the application of management behaviours and specific situations. In other words, the way you manage should change depending on the circumstances. One size does not fit all.

Theory: The contingency approach to management finds its foundation inthe contingency theory of leadership effectiveness developed by management psychologist Fred Fielder. The theory states that leadership effectiveness, as it relates to group effectiveness, is a component of two factors: task motivation, or relation motivation, and circumstances. You measure task motivation, or relation motivation, by the least preferred co-worker (LPC) scale. The LPC scale asks the manager to think of the person they least liking working with and then rate that person on a set of questions, each involving an 8-point scale. For example, a score of one would be uncooperative, and a score of eight would be cooperative. Fielder believed that people with a higher LPC score try to maintain harmony in heir work relationships, while people with a lower LPC score are motivated to focus on task accomplishment.

The theory states that task or relations motivations is contingent upon whether the manager is able to both control and effect the group's situational favourability, or outcome. According to the theory, you can assess situational favourability by three factors:

Leader-member relations: This factor addresses the manager'sperception of his cooperative relations with his subordinates. In other words, is the cooperation between you and your employees good or bad?

Task structure: This factor relates to whether the structure of the worktask is highly structured, subject to standard procedures and subject to adequate measures of assessment. Certain tasks are easy to structure, standardize and assess, such as the operation of an assembly line.

Position power: This factor asks if the manager's level of authority isbased on punishing or rewarding behavior. For example, does the manager derive his authority

from providing bonuses for meeting sales goals or terminating employees for failure to meet the goals. The combination of leader-member relations, task structure and position power create different situations that have been coined octants one through eight. You can divide these eight situations into three broad categories: favourable situations, intermediate situations and unfavourable situations. According to the theory, each situation is handled the best by either high or low LPC managers. The theory argues that high LPC managers are most effective at influencing employee group behavior in intermediate situations, while low LPC managers are most effective in favourable or unfavourable situations.

Monetary and Non-Monetary incentives to motivate work teams:

The motivational factors that motivate a person to work and which can be used to enhance their performance can be classified into two categories— monetary factors and non-monetary factors

Monetary Factors:

Monetary factors are extrinsic to work, such as the following:

1. Salary or wages:

This is one of the most important motivational factors in an organization. Salaries and wages should be fixed reasonably and paid on time.

2. Bonus:

Bonus is an extra payment over and above salary, and it acts as an incentive to perform better. It is linked to the profitability and productivity of the organization.

3. Financial incentives:

The organization provides additional incentives to their employees such as medical allowance, travelling allowance, house rent allowance, hard duty allowance and children educational allowance.

4. Promotion (monetary part):

Promotion is attached with increase in pay, and this motivates the employee to perform better.

5. Profit sharing:

This is an arrangement by which organizations distribute compensation based on some established formula designed around the company's profitability.

6. Stock option:

This is a system by which the employee receives shares on a preferential basis which results in financial benefits to the employees.

Non-monetary Factors:

Non-monetary factors are rewards intrinsic to work, such as the following:

1. Status:

An employee is motivated by better status and designation. Organizations should offer job titles that convey the importance of the position.

2. Appreciation and recognition:

Employees must be appreciated and reasonably compensated for all their achievements and contributions.

3. Work-life balance:

Employees should be in a position to balance the two important segments of their life—work and life. This balance makes them ensure the quality of work and life. A balanced employee is a motivated employee.

4. Delegation:

Delegation of authority promotes dedication and commitment among employees. Employees are satisfied that their employer has faith in them and this motivates them to perform better.

5. Working conditions:

Healthy working conditions such as proper ventilation, proper lighting and proper sanitation improve the work performance of employees.

6.Job enrichment:

This provides employees more challenging tasks and responsibilities. The job of the employee becomes more meaningful and satisfying.

7. Job security:

This promotes employee involvement and better performance. An employee should not be kept on a temporary basis for a long period.

SocialResponsibility of Management:

Socialresponsibilityreferstotheprocesswithincludesseveral activities from providing safe products and servicestogiving apportion of the company's profits to welfare organizations.

<u>Responsibilitytowards</u> shareholders: _ The business enterprise has theresponsibilitytoprovidefairreturnoncapitaltotheshareholders. The firmmust providet hemregular, accurate, and full information about the working of enterprise in order to fulfill and dencourage their interest in the affairs of the company.

<u>Responsibilitytowardsconsumers</u>: Themanagementhastoprovidequalityproducts and services to the customers at reasonable prices. It should consider customers uggestions and alsoplanits ervices more effectively through consumers at is faction survey.

LEADERSHIP

CONCEPT: Leadership is the process of influencing the behaviour of other towork willingly an enthusiastically for achieving predetermined goals.

DEFINITION: —Leadership is interpersonal influence exercised in a situation and directed through communication process, towards the attainment of a specified goal or goals||. — **Tennenbaum**.

—Leadership is the process of influencing and supporting others to work enthusiastically toward achieving objectives||. – **Barnard Key.**

Qualities of successful Leader:

- 1. A good leader has an exemplary character. It is of utmost importance that a leader is trustworthy to lead others. A leader needs to be trusted and be known to live their life with honesty and integrity. A good leader —walksthetalk|| and in doing so earns the right to have responsibility for others. True authority is born from respect for the good character and trustworthiness of the person who leads.
- 2. A good leader is enthusiastic about their work or cause and also about their role. People will respond more openly to a person of passion and dedication. Leaders need to be able to be a source of inspiration, and be a motivator towards the required action or cause. Although the responsibilities and roles of a leader may be different, the leader needs to be seen to be part of the team working towards the goal. This kind of leader will not be afraid to roll up their sleeves and get dirty.
- 3. A good leader is confident. In order to lead and set direction a leader needs to appear confident as a person and in the leadership role. Such a person inspires confidence in others and draws out the trust and best efforts of the team to complete the task well. A leader who conveys confidence towards the proposed objective inspires the best effort from team members.
- 4. leader also needs to function in an orderly and purposeful manner in situations of uncertainty. People look to the leader during times of uncertainty and unfamiliarity and find reassurance and security when the leader portrays confidence and a positive demeanor.
- 5. Good leaders are tolerant of ambiguity and remain calm, composed and steadfast to the main purpose. Storms, emotions, and crises come and go and a good leader takes these as part of the journey and keeps a cool head.
- 6. A good leader as well as keeping the main goal in focus is able to think analytically. Not only does a good leader view a situation as a whole, but is able to

break it down into sub parts for closer inspection. Not only is the goalin view but a good leader can break it down into manageable steps and make progress towards it.

7. A good leader is committed to excellence. Second best does not lead to success. The good leader not only maintains high standards, but also is proactive in raising the bar in order to achieve excellence in all areas.

LEADERSHIP STYLES:

Leadership styles are the patterns of behaviour which a leader adopts in influencing the behaviour of his subordinates. Based on the degree of authority used by the supervisors, there are three leadership styles.

1. Autocratic Leadership: It is also known as authoritarian, directive ormonothetic style. In autocratic leadership style, a manager centralizes decision-making power in him. He structures the complete situation for his employees and they do what they are told. Here the leadership may be negative because followers are uninformed, insecure, and afraid if the leader's authority.

Advantages:-

- 1. It provides strong motivation and reward to a manager exercising this style.
- 2. It permits very quick decisions as most of the decisions are taken by a single person.
- 3. Strict discipline will be maintained.
- 4. Less competent subordinates also have scope to work in the organisation under his leadership style.

Disadvantages:-

- 1. Employees lack motivation; Frustration, low morale and conflict develop in the organisation.
- 2. ere is more dependence and less individuality in the Organisation. As such future leaders in the organisation do not develop.
- 3. People in the organisation dislike it specially when it is strict and the motivational style is negative.

1. Participative Leadership:-

This style is also called democratic, consultative or ideographic. A participative is defined as mental and emotional involvement of a person in a group situation which encourages him to contribute to group goals and share responsibility in them. A participative manager decentralizes his decision-making process, instead of taking unilateral decisions, he emphasis on consultation and participation of his subordinates.

2. Free Rein Leadership:-

Free Rein or lassie – faire technique means giving complete freedom to subordinates. In this style, manager once determines policies, programmes and limitations for action and the entire process is left to subordinates. Group member's person everything and the manager usually maintains contacts with outside persons to bring the information and materials which the group needs.

LEADERSHIP STYLES: - Leadership styles refer to a leader's behaviour. Behavioral pattern which the leader reflects in his role as a leader is often described as the style of leadership. It is the result of the philosophy, personality and experience of the leader. The important leadership styles are as follows:-

- 1. Autocratic (or) Authoritarian leaders
- 2. Participative (or) Democratic leaders
- 3. Free rein (or) Laiser faire leaders

Autocratic Leadership Style: - This is also known as authoritarian, directive style. In this style manager centralizes decision-making power in him. He structures the complete work situation for his employees. He does not entertain and suggestions or initiative from subordinates. He gives orders and assigns tasks without taking subordinates opinion. There are three categories of autocratic leaders.

Strict Autocrat: - He follows autocratic styles in a very strict sense. Hismethod of influencing subordinates behaviour is through negative motivation that is by criticizing subordinates, imposing penalty etc...

Benevolent Autocrat: - He also centralizes decision making power in him, but his motivation style is positive. He can be effective in getting efficiency n man situations. Some like to work under strong authority structure and they drive satisfaction by this leadership.

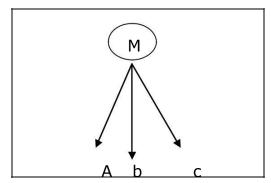

Incompetent autocrat: - Sometimes, superiors adopt autocratic leadershipstyle just to hide their in competency, because in other styles they may exposed before their subordinates. However, this cannot be used for a long time.

Advantages:-

- **1.** It provides strong motivation and reward to manager.
- 2. It permits very quick decisions.
- 3. Less competent subordinates also have scope to work in the organisation.

Disadvantages:-

- **1.** People in the organisation dislike it specially when it is strict and the motivational style is negative.
- 2. Employees lack motivation frustration, low morale and conflict develops in the organisation.
- 3. There is more dependence and less individuality in the organisation.

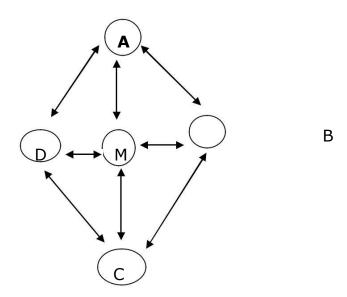

Participative Leadership Style:-It is also called as democratic, consultative or idiographic leadership style. In this style the manager decentralizes his decision-making process. Instead of taking unilateral decision he emphasizes consultation and participation of his subordinates. He can win the cooperation of his group and can motivate them effectively and positively.

Advantages:-

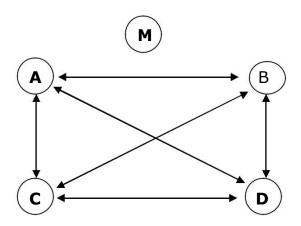

- 1. Employees are highly motivated.
- 2. The productivity of employees is very high.
- 3. Subordinates share the responsibility with the superior and try to safeguard them also.

Disadvantages:-

- 1. Complex nature of organisation requires as through understanding of its Problems which lower-level employees may not be able to do.
- 2. Some people in the organisation want minimum interaction with their superior.
- 3. Some leaders may use this style as a way of avoiding responsibility.

Free-rein Leadership:-A free-rein leader does not lead, but leaves the group entirely to itself as shown in the following figure.

In this style, manager once determines policy, programmes, and limitations for action and the entire process is left to subordinates group members perform everything and the manager usually maintains contacts with outside persons to bring the information and materials which the group needs.

The following figure shows the spectrum of a wide variety of leadership styles moving from a very authoritarian style at one end to a very democratic style at the other end, as suggested by Tannenbaum and warren H.schmidt.

Autocratic Democratic Free Rein

Use of Authority

Area of freedom permitted to subordinates

ORGANISATION DESIGN AND STRUCTURES

INTRODUCTION:

-Management is a process involving planning, organizing, directing and controlling human efforts to state of objectives in an organization.

The second phase of management process is organizing, which basically involves analysis of activities to be performed for achieving organizational objectives, grouping these activities into various division, departments and sections so that these can be assigned to various individuals and delegating them appropriate authority so that they are able to carry on their work effectively.

CONCEPT OF ORGANISATION AND ORGANISING:

In management literature, sometimes the term organisation and organizing are used inter changeably because the term organisation is used in many ways. But it is not correct organisation is different from organising. Organising is one of the functions of management where asorganisation refers to the institution where in the functions of management is performed. Organising is a process of –

□ Determining, grouping and structuring the activities.

		Creating rules for effective performance at work.
		Allocation necessary authority and responsibility.
		Determining detailed procedures and systems for different problems areas such as
		coordination, communication motivation etc.
TL -	14	timata vasult of avacuisius is avacuisation. To ather vasuda, avacuisius fivation and a

The ultimate result of organising is organisation. In other words, organising function ends with creating a structure of relationships.

FORMAL AND INFORMAL ORGANISATION:

Formal organisation refers to the structure of well-defined jobs, each bearing a definite authority, responsibility and accountability.

CHARACTERISTICS:

- 1. Organisation structure is designed by the top management to fulfill certain requirements.
- 2. Coordination among members and their control are well specified through process, procedures rules etc.
- 3. Organisation concentrates more on the performance of jobs and not on the individuals performing the jobs.

Informal organisation refers to the natural grouping of people on the basis of some similarity in an organisation.

—It refers to people in group associations at work, but these associations are not specified in the blue print of the formal organisation, the informal organisation means natural grouping of people in the work situations||.

CHARCTERISTICS:

- o Informal organisation is a natural out come at the work place.
- o Informal organisation is created on the basis of some similarity among its members. The basis of similarity may be age, place of origin, caste, religion, liking/disliking etc.
- o Membership is an informal organisation is voluntary.
- o Behavior of members of the informal organisation is coordinated and controlled by group norms and not by the norms of formal organisation.

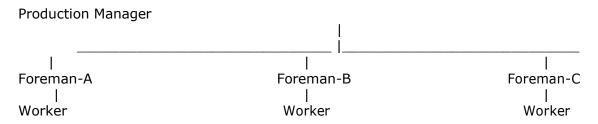

TYPES OF ORGANIZATIONAL STRUCTURES:

LINE ORGANISATION STRUCTURE

It is also known as scalar, military, or vertical organisation and perhaps is the oldest form. In this form of organisation managers have direct responsibility for the results; line organisation can be designed in two ways.

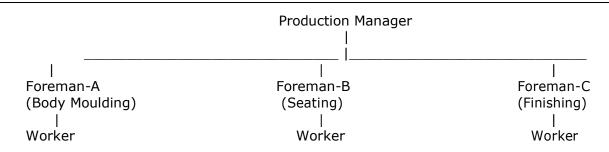

1. PURE LINE ORGANISATION:

Under this form, similar activities are performed at a particular level. Each group of activities is self – contained unit and is able to perform the assigned activities without the assistance of others

2. DEPARTMENTAL LINE ORGANISATION:

Under this form, entire activities are divided into different departments on the basis of similarity of activities. The basic objective of this form is to have uniform control, authority and responsibility.

Merits	Demerits
 It is simple to understand Easy supervision & control Quick decisions It sets clearly the direct lines of authority and responsibility of a line manager 	 Lack of specialization Low – Morale Autocratic approach Overburden to manager

Suitability:- It is suitable to small-scale organizations where the number of subordinatesis quite small

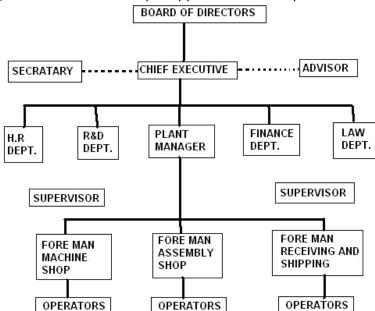

LINE AND STAFF ORGANISATION:

It refers to a pattern in which staff specialists advise line managers to perform their duties. When the work of an executive increases its performance requires the services of specialists which he himself can not provide because of his limited capabilities on these matters. Such advise is provided to line managers by staff personal who are generally specialists in their fields. The staff people have the right to recommend, but have no authority to enforce their preference on other departments. **FEATURES:-**

- ☐ This origin structure clearly distinguishes between two aspects of administration viz., planning and execution.
- \square Staff officers provide advice only to the line officers; they do not have any power of command over them.
- $\hfill\Box$ The staff supplements the line members.

MERITS	DEMERITS
1. It enhances the quality of decision	1. It may create more friction or
2. Greater scope for advancement3. It relieves the line managers.4. Reduction of burden.	Conflict between line and staff 2. It is expensive 3. It creates confusion

SUITABILITY: - It can be followed in large organizations where specialization of activitiesis required, because it offers ample opportunities for specialization.

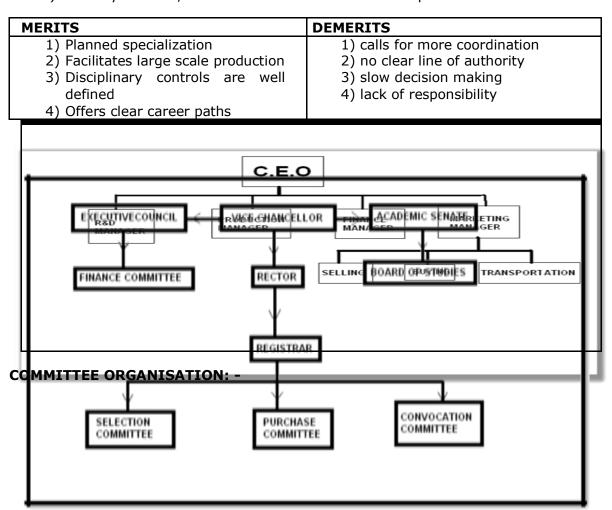

FUNCTIONAL ORGANISATION STRUCTURE:-

It is the most widely used organization structure in the medium and large scale organizations having limited number of products. This structure emerges from the idea that the organization must perform certain functions in order to carry on its operations.

Functional structure is created by grouping the activities on the basis of functions required for the achievement of organizational objectives. For this purpose, all the functions required are classified into basic, secondary and supporting functions according to their nature & importance.

FEATURES:

- 1) The whole activities of an organisation are divided into various functions
- 2) Each functional area is put under the charge of one executive
- 3) For any decision, one has to consult the functional specialist

Committee organization structure:

A committee does not represent a separate type of organization like line and staff, or functional. It is rather a device which is used as supplementary to or in addition to any of the above types of organizations.

A committee may be defined as a group of people performing some aspects of Managerial functions. Thus, a committee is a body of persons appointed or elected for the Consideration of specific matters brought before it.

MATRIX ORGANISATION

It is also called project organization. It is a combination of all relationships in the organization, vertical, horizontal and diagonal. It is a mostly used in complex projects. The main objective of Matrix organisation is to secure a higher degree of co-ordination than what is possible from the conventional, organizational structures such as line and staff.

In matrix organization structure, a project manager is appointed to co-ordinate the activities of the project. Under this system a subordinate will get instructions from two or more bosses, Viz., administrative head and his project manager.

Merits

- 1. It offers operational freedom & flexibility
- 2. It focuses on end results.
- 3. It maintenance professional Identity.
- 4. It holds an employee responsible for management of resources.

Demerits:-

- 1. It calls for greater degree of coordination,
- 2. It violates unity of command.
- 3. Difficult to define authority & responsibility.
- 4. Employee may be de motivated.

Suitability:-

It can be applicable where there is a pressure for dual focus, pressure for high in formation processing, and pressure for shred resources. Ex:- Aerospace, chemicals, Banking, Brokerage, Advertising etc..,

Virtual Organisation

Virtual organisations facilitate competitiveness particularly when these organisations are part of the global economy. Here, there can be alliances and partnerships with other organisations almost all over world. It is a flexible Organisation structure that removes the traditional boundaries. It allows easy reassignment and reallocation of resources to take quick advantage of shifting opportunities in global

markets. To avoid disintegration and to attain the effective needed focus, the lead virtual organisations must have a shared vision, strong brand and high trust culture.

The virtual Organisation is a temporary network of companies that come together quickly to exploit fast changing opportunities. Virtual Organisations appear to be bigger than traditional organisations. As virtual organising requires a strong information technology (IT) platform. The boundaries that traditionally separate a firm from its suppliers, customers and even competitors are largely eliminated, temporarily and in respect to a given transaction or business purpose. Virtual Organisations come into being 'as needed' when alliances are called into action to meet specific operating needs and objectives. When the task is complete, the alliance rests until next called into action. Each partner in the alliance contributes to the virtual Organisation what it is best at-its core competence.

Cellular Organisation

Organisation structured around the units/cells that complete the entire assembly processes are called cellular organisations. In the modem organizations, cellular Organisations have been replacing the continuous line or linear production process systems. In cellular organisations, workers manufacture total product or subassemblies in teams (cells).

Every team (cell) of workers has the responsibility to improve or maintain the quality and quantity of its products. Each team is free to reorganise itself to improve performance and product quality. These cells comprise self- managed teams. They monitor themselves and also correct where necessary on their own. Cellular Organisations are characterised by much smaller staff all over the Organisation with middle management positions reduced and lean management members at the top. It is both a lean and flat structure.

Team Structure

A structure in which the entire organisation is made up of work groups or teams is known as team structure. Team structures are both permanent and also temporary in nature as situation demands. Traditional Organisations are characterized by vertical structures and modem Organisations are identified by the horizontal i.e., team structures. 'We report to each other' is the main feature of team structure.

It leads to boundarylessOrganisation in a borderless world. In team structures, we find cross functional teams meant for improving lateral relations, solving problems, completing special projects and accomplishing routine tasks. A cross functional team comprises members from different functional departments such as marketing, finance, HR, production etc. P

roject teams are convened for a particular task or project and these get dissolved once task is completed. The intention here is to quickly bring together the people with the needed talents and focus their efforts intensely to solve a problem or take advantage of a special opportunity. Here employees are more involved and empowered because of reduced barriers among functional areas. Sometimes, when there is pressure on teams to perform and there is no clear chain of command, team structures fail to deliver results.

Boundary Less Organization:-

Problems with traditional organizational structures:-

- 1. Lack of flexibility to changing mission needs/rapidly changing world.
- 1. Slow/poor in responding customer requirement.
- 2. Failure to get things to done.
- 3. Customer/vendor has a hard time dealing with the organization.

What are the boundaries?

- ☐ **Vertical:** Boundaries between layers within an organization. ☐ **Horizontal:** Boundaries which exist b/w organizational departments. ☐ **External:** Barriers between the organization and the out side world. (Customers, suppliers other govt. committees).
- ☐ **Geographic:** Barriers among organization units located in different countries.

Problem:-isolation of innovative practices & ideas.

What is boundary less Organisation?

It may be defined as an organisation structure that can avoid all the barriers (vertical, horizontal, externat, geographic) much more permeable than they are now;

Boundary less organisation allows free flow of ides/information / resources throughout the organisation and into others.

A boundary less organisation is the opposite of a bureaucracy with numerous barriers and division. In contrast, the organisation with out boundaries offers interaction and networking among professionals inside and outside the organisation. The organisation model is fluid and highly adaptive, much like an open system in biology.

Jack Welch, former CEO of General Electric, stated his vision for the company as a —boundaryless company||. By this he meant an —open, anti-parochial environment, friendly toward the seeking and sharing of new ideas, regardless of their origin.|| The purpose of this initiative was to remove barriers between the various departments as well as between domestic and international operations. To reward people for adopting the —integrationmodel,|| bonuses were awarded to those who not only generated new ideas but also shared them with others.

Inverted Pyramid structure:

The traditional business is styled within form of a pyramid along with the chief executive officer at the top, senior executives underneath, and many more. There are several layers in the management structure, that reflects who reports to whom. In the inverted management pyramid display in figure, customers have the most significant role in driving the business. It also provides the front line employees a same ability as they are closest to the customers. Because the customers are considered basic, it also helps to improve the business. A flow of communication from the customers and inside the enterprise improves vastly. At one the inverted pyramid idea is accepted, a role of management requires undergoing a change: From a commanding role, it shall become a supporting one

Lean and flat organization structure: Lean Organizational Structure:

Large, complex organizations often require a taller hierarchy. In its simplest form, a tall structure results in one long chain of command similar to the military. As an organization grows, the number of management levels increases and the structure grows taller. In a tall structure, managers form many ranks and each has a small area of control. Although tall structures have more management levels than flat structures, there is no definitive number that draws a line between the two.

Flat Organizational Structure:

Flat structures have fewer management levels, with each level controlling a broad area or group. Flat organizations focus on empowering employees rather than adhering to the chain of command. By encouraging autonomy and self-direction, flat structures attempt to tap into employees' creative talents and to solve problems by collaboration.

MODERN TRENDS IN ORGANISATIONAL STRUCTURE DESIGNS:

Organizations in the recent times have been gearing themselves to suit to the growing demands from their stakeholders in terms of responsiveness, flexibility, adaptability etc. In this process, they are following organic structure, which

are more agile, flexible and adaptable to the changing circumstances. Virtual organizations, cellular organizations, team structure, boundaryless organization and inverted pyramid and different forms of organic structure that are widely seen among most of the sun-rise sectors such as financial services, Information Technology (IT) and IT enabled services. These structures have been contributing to the organic growth of the organization.

The focus of organic structures is to do away with those activities which do not directly contribute to the growth of the organization and focus only on those activities which directly lead the organization for the achievement of the given goals.

These are discussed below:

1. Virtual Organisation:

Virtual organizations facilitate competitiveness particularly when these organizations are part of the global economy. Here, there can be alliances and partnerships with other organizations almost all over world. It is a flexible organization structure that removes the traditional boundaries. It allows easy reassignment and reallocation of resources to take quick advantage of shifting opportunities in global markets. To avoid disintegration and to attain the effective needed focus, the lead virtual organizations must have a shared vision,, strong brand and high trust culture.

The virtual organization is a temporary network of companies that come together quickly to exploit fast—changing opportunities. Virtual organizations appear to be bigger than traditional organizations. As virtual organizing required a strong informationtechnology(IT) platform, The boundaries that traditionally separate a firm form its suppliers, customers and even competitors are largely eliminated, temporarily and in respect to a given transaction or business purpose. Virtual organizations come into being 'as needed' when alliances are called into action to meet specific operating needs and objectives. When the task is complete, the alliances rest until next called into action. Each partner in the alliance contributes to the virtual organization what it is best as-its core competence.

2. Cellular Organization:

Organizations structured around the units/cells that complete the entire assembly process are called cellular organizations. In the modern organizations, cellular organizations have been replacing the continuous line or linear production process system. In cellular organizations, workers manufacture total product or subassemblies in teams (cells). Every team (cell) of workers has the responsibility to improve or maintain the quality and quantity of its products. Each team is free to recognize itself to improve performance and product quality. These cells comprise self-managed teams. They monitor themselves and also correct where necessary on their own. Cellular organizations are characterized by much smaller staff all over the organization with middle management positions reduced and lean management members at the top. It is both a lean and flat structure.

3.Team Structure:

A structure in which the entire organization is made up of work groups or teams is known as team structure. Team structures are both permanent and temporary in nature as situation demands. Traditional organizations are characterized by vertical structures and modern organizations are identified by the horizontal i.e., team structures. 'We report to each other' is the main feature of team structure. It

leads to boundary less organization in a borderless world. In team structures, we find cross-functional teams meant for improving lateral relations, solving problem, completing special projects and accomplishing routine tasks. A cross-functional team comprises members from different functional departments such as marketing, finance, HR, production etc. Project teams are convened for a particular task or project and these get dissolved once task is completed. The intention here is to bring together the people with the needed focustheireffortsintenselytosolveaproblemortakeadvantageofaspecial opportunity. Here employees are more involved and empowered because of reduced barriers among functional areas. Sometimes, when there is pressure on teams to perform and there is no clear chain of command, team structure fails to deliver results.

4. Boundaryless Organization:

At the name indicates, a boundary less organization eliminates internal boundaries among subsystems and external boundaries with external environment. It is a combination of team and network structures with the addition of temporariness. Such type of organization structure is characterized by spontaneous teamwork and communication. This replaces formal chain of command. It is a dynamic organization structure wherein organizational needs are met through a judicious mix of outsourcing contracts and alliances as and when needed. The key features of boundary less organization include knowledge-sharing, absence of hierarchy and bureaucracy, empowerment voluntary participation of expert members, technology utilization and temporariness. The focus is on mustering necessary talent and competencies required for the achievement of a task without any bureaucratic restrictions. Creativity, quality, timeliness, increase in speed and flexibility are the benefits the boundary less organization yields. It also reduces inefficiencies. The boundary less organization is highly flexible and responsive. These draw on talent wherever it is found. Sometimes, they are ineffective due to problems in communication.

5. Inverted Pyramid:

This is an alternative to the traditional chain of command. This is a structure, which is narrow at the top and wide at the base. It includes a few levels of management. For instance, sales people and sales support staff sit on the top as the key decision makers for all the issues related to sales and dealing with the customers. Since the sales staffs are in touch with the customer and aware of the requirements of the customers, they are given all the freedom to follow their own best judgment at alllevels.

Departmentation: On the basis activity or departmentation Industrialization has created problems, which are complex in nature. It created a necessity of large-scale industries to meet the increased demand. In large scale, industries there are large number of employees. For the sake of efficient supervision and control, the factory/enterprise is divided into different departments. Each department is entrusted with a particular function for carrying out particular activity each departmental head is expected to control and supervise the work in his department.

Definition: The process of dividing the work and then grouping them into units and submits or departments for the purpose of administration.

DEPARTMENTATION AND DECENTRALIZATION:

The first task in designing an organisation structure is the identification of activities and to group them properly. The process of grouping the activities is known as Departmentation.

The process of grouping of activities into units for the purpose of administration is called departmentation. It can be defined "as the process by which activities or functions of enterprise are grouped homogeneously into different groups."

The administrative units are called divisions, units or departments. The followings are the basis of departmentation:

- (a) When departmentation is done on the back of functions the departments created are production, marketing, accounting, and finance and personnel departments.
- (b) When departmentation is done on the basis of geographical area, the departments are known as eastern department, western department, northern and southern department.
- (c) Departmentation can be done on the basis of customers.
- (d) Departmentation can be done on the basis of product handled.

Method of Departmentation:

By function: It is divided into primary function to be performed such as, finance, marketing, production, personnel etc. each function separate departments

By product: All activities related to a particular product line may be grouped together. This basis of departmentation has become increasingly important, especially for complex organizations producing different types of products.

By process: In this method, the manufacturing activity are sub divided on the basis of their process of production, similar machines such as all laths, milling machines, grinding machines, milling machine etc. are grouped into separate section, such as lathe department, milling department, drilling department.

By geographical region: This method may be adopted when the enterprise produces and sells in the wide market, often in international markets.

Decentralization or decentralisation is the process of redistributing or dispersing functions, powers, people or things away from a central location or authority. While centralization, especially in the governmental sphere, is widely studied and practiced, there is no common definition or understanding of decentralization. The meaning of decentralization may vary in part because of the different ways it is applied. Concepts of decentralization have been applied to group dynamicsand management science in private businesses and organizations, political science, lawand public administration, economicsand technology.

AUTHORITY AND RESPONSIBILITY:

Authority may be defined as the power to make decisions which guide the actions of another. It is a relationship between two individuals, one superior, other subordinate. The superior frames and transmits decisions with the expectation that these will be accepted by the subordinate.

Responsibility is defined as that obligation of an individual to carry out assigned activities to the best of his ability. It is not merely duty that is assigned but an obligation that the duty is performed.

PARITY OF AUTHORITY AND RESPONSIBILITY:

Principle of authority and responsibility suggests that authority of a person should match his responsibility. Otherwise, the performance of the managers goes unchecked where the authority exceeds the responsibility. It may lead to miss-utilization of authority and vice-versa.

DELEGATION OF AUTHORITY:

Delegation of authority is one of the important factors in the process of organising. It is essential to the existence of a formal organisation. Delegation means conferring authority from one manager to another in order to accomplish particular assignments.

CENTRALISATION AND DECENTRALISATION:

Another highly important issue in organising is the extent to which authority is centralized, or decentralized, in a formal organisation structure. In management centralization refers to concentration of authority and decentralization refers to dispersion of authority.

Principles For Effective Delegation Of Authority:

There are a few guidelines in form of principles which can be a help to the manager to process of delegation. The **principles of delegation** are as follows: -

- 1. **Principle of result excepted-** suggests that every manager before delegating thepowers to the subordinate should be able to clearly define the goals as well as results expected from them. The goals and targets should be completely and clearly defined and the standards of performance should also be notified clearly. For example, a marketing manager explains the salesmen regarding the units of sale to take place in a particular day, say ten units a day have to be the target sales. While a marketing manger provides these guidelines of sales, mentioning the target sales is very important so that the salesman can perform his duty efficiently with a clear set of mind.
- 2. **Principle of Parity of Authority and Responsibility-** According to this principle, the manager should keep a balance between authority and responsibility. Both of them should go hand in hand.
 - According to this principle, if a subordinate is given a responsibility to perform a task, then at the same time he should be given enough independence and power to carry out that task effectively. This principle also does not provide excessive authority to the subordinate which at times can be misused by him. The authority should be given in such a way which matches the task given to him. Therefore, there should be no degree of disparity between the two.
- 3. **Principle of absolute responsibility-** This says that the authority can be delegated but responsibility cannot be delegated by managers to his subordinates which means responsibility is fixed. The manager at every level, no matter what is his authority, is always responsible to his superior for carrying out his task by delegating the powers. It does not means that he can escape from his responsibility. He will always remain responsible till the completion of task. Every superior is responsible for the acts of their subordinates and are accountable to their superior therefore the superiors cannot pass the blame to the subordinates even if he has delegated certain powers to subordinates example if the production manager has been given a work and the machine breaks down. If repairmen is not able to get repair work done, production manager will be responsible to CEO if their production is not completed.
- 4. **Principle of Authority level-** This principle suggests that a manager shouldexercise his authority within the jurisdiction/framework given. The manager should be forced to consult their superiors with those matters of which the authority is not given that means before a manager takes any important decision, he should make sure that he has the authority to do that on the other hand, subordinate should also not frequently go with regards to their complaints as well as suggestions to their superior if they are not asked to do. This principle emphasizes on the degree of authority and the level upto which it has to be maintained.

UNIT-2

INTRODUCTIONTOOPERATIONSMANAGEMENT

Plantlocation: Plant location is a strategic decision several factors influence this decision. Themainobjectiveofanybusinessistooptimizeitscostand revenuethatis, minimizeitscosts and maximizeits returns.

The degree of significance for the selection of location for any enterprise mainly depends on its size and nature large scale industries requiring huge amount of investment there are many considerations other than the local demand intheselection proper plant location these plants cannot be easily shifted to other place and an error of judgment in the selection of site can be vary expensive to the organization. However, small-scale industry mainly selects the site where in accordance with its capacity; the local market is available for its products.

Itcaneasilyshifttootherplacewhenthereisanychangeinthe market.

Factorsaffectingplantlocation:

- **Nearness to Market**: If the plant is located close to the market the cost of transportation can be minimized. This also helps the producers to have direct knowledge of the requirements of the customers.
- **Nearness to supply of raw materials**: As far as possible the site selected should be near the source of raw materials, so that the cost of transportation can be minimized and storing cost can be reduced due to shorter lead time.
- **Availability of labour**: Availability of right kind of labour force in required number at reasonable rates is also a deciding factor in selection of site
- Transportandcommunicationfacilities: Generally,industrieshaveatendencyto locatetheindustrialunitsneartherailwaystation,highwayorportareas.
- **Availability of power and fuel**: Coal, electricity, oil and natural gas are the important sources of power in the industries. Ex:Tata iron and steel industry is established near the coal mines of Bihar.
- **Climatic conditions:** Climatic conditions largely affect certain production processes and also the efficiency of the employees. Ex:Textile mills require moist climate that why these plant located at Mumbai and Ahmedabad.
- Availabilityofwater: Waterisusedinindustries forprocessing asinpaperin chemicalindustries, forgeneration ofpowerinhydroelectric power, plantsand alsorequiredfordrinkingsanitarypurposealso.
- **Ancillary industries:** Many industries such as processing and assembly industriesarenotproducingalthepartsoftheirproductbutpurchasesomeof the parts from ancillary industries producing it.
- Financial and other aids: For the development of backward region scentralas
 well as state government provide certain incentives and facilities such as cashsubsides, concession financial assistance, land, power and other facilities at
 cheaper rates, tax concession etc

Plant Layout:

Atechniqueoflocatingmachines, processes and plantservices within the factory in order to secure the greatest possible output of high quality at the lowest possible to talcost of production

Typeofplantlayout:

1.Productor line layout: This type of layout is developed for product-focused systems. In this type of layout only one product, or one type of product, is producedinagivenarea. In case of product being assembled, this type of layout is popularly known as an assembly line layout.

The work centers are organized in the sequence of appearance. The raw material centreat one end of the line and goes from one operation to another rapidly with minimum of work-in-process storage and material handling.

- 2.**Process or Functional layout**: This type of layout is developed or process focused systems. The processing units are organized by functions into departments on the assumption that certain skills and facilities are available in each department similar equipments and operations are grouped together ,e.g., milling, foundry, drilling, plating, heat treatment etc. The use of process-focused systems is very wide in both manufacture and other service facilities such as hospitals, large offices, municipal services, etc.
- 3. **Cellularorgrouplayout**: Itisspecialtypeoffunctionallayoutinwhichthe facilities are clubbed to gether into cells. This is suitable for systems designed to use the concepts, principles and approaches of group technology'. Such a layout offers the advantages of mass production with high degree of automation even if the numbers of products are more with flexible requirement. In such a system the facilities are group into cells which are able to perform similar type of functions for a group of products.
- 4.job **ShopLayout**: It is a layoutfor a verygeneral flexible system that is processing job production, The preparation of such alayout is dependent on the analysis of the possible populations of orders and is a relatively, complex affair.
- 5. **ProjectorFixedposition Layout**: This is the layout for project type systems in which the major component is kept at a fixed position and all other materials, components, tools machines, work etc. are brought and assembly or fabrication is carried out. This type of layout is now not used very commonly as the machines required for manufacturing work are big and complicated. Thefixed position layout is used only when it is difficult to move the major component and fabricationis to be carried out. Ex: production of ships.
- 1.PRINCIPLES OF PLANT LAYOUT
- 2. Principle of Integration
- 3. Principle of continuous flow
- **4.Principle of smooth flow**: It states that bottlenecks, congestion points and bulk tracking should be removed by proper line balancing techniques.
- **5.Principle of cubic space:** Space of a room, it the ceiling height is also utilized, more materials can be accommodated in the same space.

- **6.Principle of satisfaction of safety**: Working places-safe, well-ventilated and free from dust, noise fumes, odors and other hazardous conditions, help to increase the efficiency of the workers and improve their morale.
- **7.Principle of flexibility:** It means the best layout in one which can be adopted and re-arranged at a minimum cost with least inconvenience.

PRODUCTIVITY:

Definition: Productivity is defined as the rate at which the goods and services are produced. It refers to the relationship between the inputs and the output. It is calculated as a ratio between the amount produced and the amount of resources (land, labour, capital, technology etc.) used in the course of production.

In other words, Method of Production:

Job production:In this system, goods are produced according to the orders with this method, individual requirements of the consumers can be met. Each job order stands alone and is not likely to be repeated. This type of production has a lot of flexibility of operation and hence general purpose machines are required. Factories adopting this type of production, are generally small in size.

Advantages:

- 1. It is the only method, which can meet the individual requirement.
- 2. There is no managerial problem, because of very less number of workers, and small size of concern. Such type of production requires less money and is easy to start.

Disadvantages:

- 1. There is no scope for continuous production and demand
- 2. As the purchase of raw materials is less, hence cost of raw materials per unit will be slightly more.
- 3. For handling different type of jobs, only skilled and intelligent workers are needed, thus labour cost increases.

Batch production: This type of production is generally adopted in medium size enterprise. Batch production is in between job production and mass production. Batch production is bigger in scale than the job production. While it is smaller than that of mass production, batch production requires more machines than job production and fewer machines that the of mass production.

Advantages:

- 1. While comparing with mass production it requires less capital
- 2. Comparing with job production, it is more advantageous commercially.
- 3. If demand for one product decrease then production, for another product may be increased, thus the risk of loss is very less.

Disadvantages:

- 1. Comparing with mass production cost of scales and advertisement per unit is more
- 2. Raw materials to be purchased are in less quantity than that in mass production; therefore it is slightly costlier than that of mass production because less quantity discount is available.

Mass production: This method of production is used by concerns where manufacturing is carried on continuously in anticipation of demand though demand

of the product may not be uniform through the year. In mass production, simplification and standardization of products are made with the help of specialized (one purpose) machine, articles of standardized nature can easily and economically be produced on a large scale. There is a small difference between mass production and continuous production. This is mainly in the kind of product and its relation to the plant. In mass production plant and equipment are flexible enough to deal with other products, involving same production process. Where as in continuous or process production only standardized product in a sequence produced. In this method layout and requirement of additional tools and equipment.

Advantages:

- A smooth flow of materials from one work station to the next in logical order.
- Since the work from one process is fed directly into the next, small in process inventories result
- Total production time per unit short
- Simple production planning control system are possible
- Little skill is usually required by operations at the production line, hence training is simple, short and inexpensive.

Disadvantages:

1. A breakdown of one machine may lead to a complete stoppage of the line that follows the machine. Hence maintenance and repair is challenging job.

Since the product dictates the layout, changes in product design may require major changes in the layout.

Work Study: Work study is one of the most important management techniques which is employed to improve the activities in the production. The main objective of work study is to assist the management in the optimum use of the human and material resources.

Definition: Work study refers to the method study and work measurement, which are used to examine human work in all its contexts by systematically investigating into all factors affecting its efficiency and economy to bring forth the desired improvement.

Method Study: Definition: The systematic recording and critical examination of existing and proposed ways of doing work, as a means of developing and applying easier and more effective methods and reducing cost it is also called motion study.

Work Measurement: Definition: Work measurement is the application of techniques designed to establish time for a qualified worker to carry out a specified job at a defined level of performance.

Work study has two parts, Method Study and Work Measurement.

Method study deals with the techniques of analyzing the way to do a given job better, Work Measurement seeks to measure the time required to perform the job. Basic procedure for Method Study:

Select: The work to be studied Record: All the relevant facts of the present or proposed method study by observation

Examine: The recorded facts critically every thing that is done, considering in turn, the purpose of the activity, the place where it is performed, the sequence in which it is done, the person who is doing it and the means by which it is done.

Develop: The most practical, economical and effective method considering all the circumstances.

Define: The new method so that it can always be identified.

Install: The method as standard practice

Maintain: That standard practice by regular routine checks.

Recording: The current process of doing the job has to be recorded, while doing so every detail however small it may be, has to be identified.

Where the process is too long, involving many stages of production, inspection or transportation, the present process of doing the job is recorded sufficiently together with all the relevant information, using the process chart symbols.

Recording Techniques: The recording techniques are of three types

- a) Process chart
- b) Diagrams
- c) Motion and film analysis
- d) Models
- A) Process Charts: 1) Out line process chart: This chart outlines the main events sequence wise considering only operations and inspections in the given job

Ex: TASK

Changing refill of a Ball Point pen Chart begins: Unscrew the cap Chart ends: Screw the cap Chart by:------

Chart Ends::-----

1.Unscrew cap 2 Unscrew neck 3 Remove the old refill 4 Place the refill in the barrel 5 Screw the neck 6 Check if the ball pen writes 7 Screw the cap 8 Assemble the spring on new refill

No. of operations 7
No. of inspections 1

Total No. of activities

2.Flow process chart: These are scale drawings of the work place, which indicate where each activity takes place. This chart is capable of reflecting undue delays in transferring work between workstations duplication of work, and unfair work assignment, which may delay the completion process.

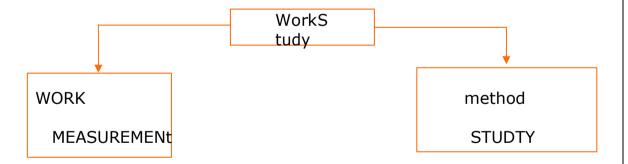

It classified into three types Man Type: It records what the worker does Materials Type: It records what happens to the materials Equipment Type: It records how the equipment used.

- 3.Two handed process chart: The two hand process chart is a chart is which theactivities of a workers hand are recorded, in their relationship to one another. Itis commonly used for repetitive and short operations
- 4. Multiple activity chart: A multiple activity chart is a chart in which the activities of more than one item (worker, machine or equipment) are recorded on a common time scale to show their inter relationship. By using separate vertical columns to represent the activities of different operators or machines on a common time scale, the chart shows very clearly the period of idleness on the part of any items during the process.

WorkStudy:

Workstudyisoneofthemostimportant management techniques whichisemployedtoimprovethe activitiesinthe production. Themain objective ofworkstudyistoassistthemanagement in the optimum use of the human and material resources.

<u>Definition</u>: Work studyrefers tothemethodstudyandworkmeasurement, which are usedto examine human work in all its contexts by systematically investigating into all factors affecting its efficiency and economy to bring for the desired improve ment.

<u>Method study: Definition</u>: The systematic recording and critical examination of existing and proposed ways of doing work, as a means of developing and applying easier and more effective methods and reducing cost it is also called motion study.

Work measurement: - <u>Definition</u>: Workmeasurementis the application of techniques designed to establish time for a qualified worker to carry out a specified jobata defined level of performance.

Work study has two parts, Method Study and Work Measurement. Methodstudydealswiththetechniques ofanalyzingthewaytodoagivenjob better, Work Measurementseekstomeasurethetimerequiredtoperformthe job.

	whilethebeltconveyertransportsthespares.	

Work Measurement: Work measurement is the application of technique to establish the time for a qualified worker to carry out a specified job at a defined level of performance.

Procedure for Work Measurement:

- 1) Sect: The work to be studied and determine the objectives of the study
- 2) Record: All the relevant data relating to circumstances in which the work is being done, the methods to be used breakdown the job into its elements
- 3) Examine: The recorded data and the detailed breakdown critically to ensure the most effective method and motions are being used and that unproductive elements are separated from productive elements.

- 4) Measure: The time required to complete each element using the appropriate work measurement techniques and calculate the time required to compete the work cycle which is known as basic time.
- 5) Compile: The standard time for the operation or work place, in case of stop watch time study the various allowances to cover relation, personal needs etc. are added to the basic time to estimate the standard time. **Techniques of work measurement**:
- 1. Time study
- 2. Synthesis from standard data
- 3. Predetermined Motion Time System (PMTS)
- 4. Analytical estimating
- 5. Work Sampling
- 1) Time study: It is defined as the art of observing and recording the time required to do each detailed element of all industrial operation.
- 2)Synthesis from standard data: This one technique of work measurement to obtained synthetic times that are synthesis from element times previously obtained from direct time studies. The analysis and measurement stage are thus conducted prior to the actual study.
- 3)Predetermine motion time system (PMTS): Every element of work is composed of some combination of basic human motions. Apart from mental activity all works can broken down into elements that usually a fundamental movement of the body or body members. After this analysis stage the basic motions that have been isolated have a time allotted to them on the basis of predetermine motion times.
- 4)Analytical estimation: Analytical estimating serves as best for measuring work. In the analysis stage we find the usually these basic elements or much larger as compared to the elements in PMTS or time study. For measuring stages the time, which will be occupied by the element at a specific speed of working is estimated.
- 5)Work Sampling: It is work measurement technique which large number of instantaneous observation are made random interval over a specified period of time of a group of workers, machine and processes. Each observation records what is happening at that instant and the present observations recorded for a particular activity or delay is a measure of the percentage of time during which that activity or delay occurs. It can also defined as a method of finding the percentage occurrence of a certain activity by statistical sampling and random observations. Procedure for conducting time study: For conducting time study average workers and average machines are selected. This study id conducted by the time study expert, who should be familiar with all the information related to the job and the conditions in which it is being done.

STATISTICALQUALITYCONTROL

Introduction: Qualityisthedetermining factorthesuccessofanyproductorservice largeresourcearecommittedin everyorganizationtoensurequality

Definition: Itisdefinedascustomersatisfactioningeneralandfitnessforusein particular. Boththeexternalconsumerwhobuytheproductandservicesandthe

internal consumers that is, all divisions or departments of the business or ganization are equally interested in the quality.

Statistical quality control: The process of applying statistical principles to solve the problem of controlling quality control of a productor service is called statistical quality control.

Oualityelements:a)Qualitydesign b)Qualityconformance

- <u>a) Quality design</u>: Quality ofdesignreferstoproduct featuresuchasperformance, reliabilitydurability,easeof use,serviceability
- <u>b) Qualityconformance:</u> Qualityconformance meanswhethertheproductmeetsthe givenqualityspecificationornot

Inspection: The process of measuring the output and comparing it to check it meets the given specified requirements or not, is called in spection.

InspectionMethods: Thefollowingarethemethodsofinspectionbasedonmerits 1)Incoming inspection: Inthismethod, the quality of the goods and services arriving into the organization is inspected. This ensures that the material suppliers adhere to the given specifications with this defective material cannot enter into the production process. This focuses on the vendor's quality and ability to supply acceptable raw materials.

<u>2)Critical point in spection</u>: Inspecting at the critical point so fa product manufacture gives valuable in sight into the completely functional process. At the point so fa manufacture that involve high costs or which offernopossibility for repair or rework, in spection is crucial further operation dependent he sere sults critical point in spection helps to drop the defective production, and thereby, facilitate avoiding unnecessary further expenditure on them.

<u>3)Processinspection</u>: Thisisalsocalledpatrolling inspection orfloorinspection or rovinginspection. Heretheinspectorgoesaroundthemanufacturingpointsinthe shopfloortoinspectthe goodsproducedonrandomsamplebasisfromtimetotime.

<u>4)Fixedinspection</u>: Itprovidesforacentralized and independent where work is brought for inspection from time to time. This method is followed where the inspection equipment cannot be moved to the points of productions.

<u>5)Finalinspection</u>: Thisiscentralized inspectionmaking useofspecialequipment. Thiscertifiesthe qualityofthe goodsbeforetheyareshipped.

ElementsofstatisticalQualityControl: ThetechniqueunderSQCcanbedivided in to two partsa)Processcontrolb)Acceptancesampling

a)Processcontrol: Processcontrolisatechniqueofensuringthequalityofthe productsduringthemanufacturingprocessitself.Ifaprocessconsistentlyproduces itemswithacceptableortolerablerangeofspecification. Itissaidtobestatically undercontrol. Processcontrolisachievedthroughcontrolcharts. Processcontrol aimstocontrolandmaintainthe qualityoftheproductsin themanufacturingprocess. Statistical controlcharts: A control chart compares graphically the process performancedatatocomputedstatisticalcontrollimits. Thesecontrollimitsactas limitlinesonthechartcontrolchatsarethetoolstodeterminewhethertheprocessis undercontrolornot.

The quality of the production process may be affected by chance cause or assignable cause.

<u>Chancecause</u>: such causes, which may or may not affect the manufacturing process are called chance cause, chance cause cannot even be identified. It is not possible to always maintain the given specification.

<u>AssignableCause</u>: Assignablecausesaffectthequalityoftheproductionprocess. Thesecausescanbeidentified andspecified. Causes such aschangeinthelabour shift, power fluctuations, or excessive toolwear are said to be assignable causes as they affect the quality of manufacturing processin different ways.

<u>Processcapability</u>: Processcapabilityreferstotheabilitytoachievemeasurable results from acombination of machines, tools, methods, materials and people engagedinproduction.

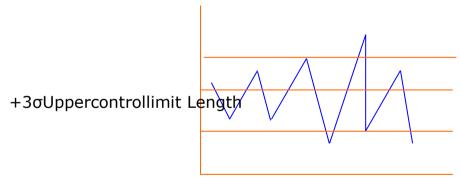

Confidencelimitsandcontrollimit:

<u>Confidencelimit</u>: Itindicatetherangeofconfidencelevel. A confidencelevelrefers to the probability that the value of measurement or parameter, such as length of screw, is correct.

Ex: Ifacomponentisrequiredwithmeasurementof50mm.across,thenthebuy acceptallcomponents measuringbetween48mmand52mmacross,considering a fivepercentconfidencelevel.

Controllimit: Control limitsarefoundinthecontrolcharts. Therearetwocontrol limits1)Uppercontrollimit(UCL) and2)Lowercontrollimit(LCL). These are determinedbasedontheprinciplesof normaldistribution

How doyou construct the control chart for this data.

-3glowercontrollimit

Length

What is a variables control chart?

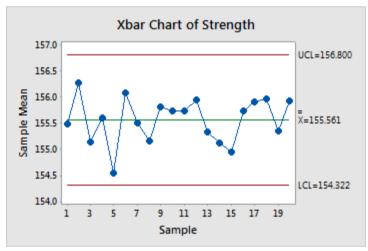

Variables control charts plot continuous measurement process data, such as length or pressure, in a time-ordered sequence. In contrast, attribute control charts plot count data, such as the number of defects or defective units. Variables control charts, like all control charts, help you identify causes of variation to investigate, so that you can adjust your process without over-controlling it.

There are two main types of variables control charts: charts for data collected in subgroups and charts for individual measurements.

Variables control charts for subgroup data

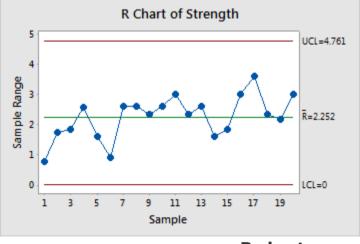

Each point on the graph represents a subgroup; that is, a group of units produced under the same set of conditions. For example, you want to chart a particular measurement from your process. If you collect and measure five parts every hour, your subgroup size would be 5.

Variables control charts for subgroups include Xbar, R, S, and Zone.

Xbar chart

Plots the process mean over time. Use to track the process level and detect the presence of special causes affecting the mean.

R chart

Plots the process range over time. Use to track process variation and detect unexpected variation.

What are Attributes Control Charts?

Attributes data arise when classifying or counting observations The Shewhart control chart plots quality characteristics that can be measured and expressed numerically. We measure weight, height, position, thickness, etc. If we cannot represent a particular quality characteristic numerically, or if it is impractical to do so, we then often resort to using a quality characteristic to sort or classify an item that is inspected into one of two "buckets".

An example of a common quality characteristic classification would be designating units as "conforming units" or "nonconforming units". Another quality characteristic criteria would be sorting units into "non defective" and "defective" categories. Quality characteristics of that type are called *attributes*.

Note that there is a difference between "nonconforming to an engineering specification" and "defective" -- a nonconforming unit may function just fine and be, in fact, not defective at all, while a part can be "in spec" and not fucntion as desired (i.e., be defective).

Examples of quality characteristics that are attributes are the number of failures in a production run, the proportion of malfunctioning wafers in a lot, the number of people eating in the cafeteria on a given day, etc.

Types of attribute control chartsControl charts dealing with the number of defects ornonconformities are called <u>c charts</u> (for count).

Control charts dealing with the *proportion* or *fraction* of defective product are called <u>p charts (for proportion)</u>.

There is another chart which handles *defects per unit*, called the *u* chart (for unit). This applies when we wish to work with the average number of nonconformities per unit of product.

Acceptance sampling

Acceptance sampling uses <u>statistical sampling</u> to determine whether to accept or reject a production lot of material. It has been a common <u>quality control</u> technique used in industry. It is usually done as products leaves the factory, or in some cases even within the factory. Most often a producer supplies a consumer a number of items and a decision to accept or reject the items is made by determining the number of defective items in a sample from the lot. The lot is accepted if the number of defects falls below where the acceptance number or otherwise the lot is rejected.

Rationale: Sampling provides one rational means of <u>verification</u> that a production lot conforms with the requirements of technical specifications. 100% inspection

does not guarantee 100% compliance and is too time consuming and costly. Rather than evaluating all items, a specified sample is taken, inspected or tested, and a decision is made about accepting or rejecting the entire production lot.

Plans have known risks: an <u>acceptable quality limit</u> (AQL) and a rejectable quality level, such as lot tolerance percent defective (LTDP), are part of the <u>operating characteristic curve</u> of the sampling plan. These are primarily statistical risks and do not necessarily imply that defective product is intentionally being made or accepted. Plans can have a known average outgoing quality limit (AOQL).

Acceptance sampling for attributes: A single sampling plan for attributes is a statistical method by which the lot is accepted or rejected on the basis of one sampleSuppose that we have a lot of size; a random sample of size is selected from the lot; and an acceptance number is determined. If it is found the number of nonconforming is less than or equal to, the lot is accepted; and if the number of nonconforming is greater than, the lot is not accepted. The design of a single sampling plan requires the selection of the sample size and the acceptance number.

MIL-STD-105 was a United States defense standard that provided procedures and tables for sampling by attributes (pass or fail characteristic). MIL-STD-105E was cancelled in 1995 but is available in related documents such as ANSI/ASQ Z1.4, "Sampling Procedures and Tables for Inspection by Attributes". Several levels of inspection are provided and can be indexed to several AQLs. The samplingplans: Basedonthenumberofsamples drawnfortakingaccept/

rejectdecisions, the sampling methods are used. There are four methods of acceptances amplings.

- 1)Single samplingplan: Alotisacceptedorrejectedonthebasis ofasingle sampledrawnfromthatcost
- 2)Doublesamplingplan: Ifitisnotpossibletodecidethefateoftheloton thebasisoffirstsample, asecondsampleisdrawnandthedecision istaken onthebasisof thecombinedresultsoffirstand secondsample.
- 3)Multiplesamplingplan: Alotisacceptedorrejectedbased upontheresult obtainedfromseveralsamples(of parts)drawnfromthelot.
- 4)Sequentialsamplingplan:(Itembyitem analysis)

Sequentialsamplinginvolvesincreasingthesamplesize by one partat atimetillthesamplebecomeslargeenoughandcontainssufficientnumber ofdefectivestodecideintelligentlywhethertoacceptorrejectthelot.

TOTAL QUALITY MANAGEMENT

Total - Made up of the whole

Quality- Degree of excellence a product or service provides

Management- Act, Art or manner of handling, controlling, directing, etc...

Why TQM:

1. A question of survival in the intense competitive environment

2. Increasing customer consciousness

DEFINITION:

- 1. TQM is the management approach of an organization, centered on quality, based on me participation of all its members and aiming at long-term success through customer satisfaction. and benefits to all members of me organization and to society.- ISO
- 2. TQM is an integrated organizational approach in delighting customers (both internal and external) by meeting their expectations on a continuous basis through every one involved with the organization working on continuous improvement in all products, services, and processes along with proper problem solving methodology INDIAN STATISTICAL INSTITUTE (ISI)
- 3. TQM is a. people focused management system that aims at continual increase in customer satisfaction at continually lower cost. TQM is a total system approach (not a separate area of program), and an integral part of high level strategy. It works horizontally across functions and departments, involving all employees, top to bottom, and exceeds backwards and forward to include the supply chain and the customer chain TOTAL QUALITY FORUM OF USA

CHARACTERISTICS

- 1. Customer Oriented
- 2. Long term commitment for continuous improvement of all process
- 3. Team work
- 4. Continuous involvement of top management
- 5. Continuous improving at all levels and all areas of responsibility

BASIC CONCEPTS OF TQM:

- 1. Top management commitment
- 2. Focus on the customer Both internal and external
- 3. Effective involvement and utilization of entire work force
- 4. Continuous improvement
- 5. Treating suppliers as partners
- 6. Establishing performance measures for the processes

PRINCIPLES OF TOM:

- 1. Customers requirements (both internal & external) must be met first time & every time
- 2. Everybody must be involved
- 3. Regular two way communication must be promoted I
- 4. Identify the training needs and supply it to the employees
- 5. Top management commitment is must

- 6. Every job must add value
- 7. Eliminate waste & reduce total cost
- 8. Promote creativity
- 9. Focus on team work.

IMPLEMENTATION

- 1. Lack of management commitment
- 2. Lack of faith in and support to TQM activities among management personnel
- 3. Failure to appreciate TQM as a cultural revolution. In other words, inability to change organizational culture
- 4. Misunderstanding about the concept of TQM
- 5. Improper planning
- 6. Lack of employees commitment
- 7. Lack of effective communication
- 8. Lack of continuous training and education
- 9. Lack of interest or incompetence of leaders
- 10. Ineffective measurement techniques and lack of access to data and results
- 11. Non-application of proper tools and techniques
- 12. Inadequate use of empowerment and team work

BENEFITS OF TQM

Tangible Benefits	Intangible Benefits
Improved product quality	Improved employee participation
Improved productivity	Improved team work
Reduced quality costs	Improved working relationships
Increased market and customers	Improved customer satisfaction
Increased profitability	Improved communication
Reduced employee grievances	Enhancement of job interest
	Enhanced problem solving capacity
	Better company image

Six Sigma

Six Sigma is a highly disciplined process that helps us focus on developing and delivering near-perfect products and services.

<u>Definition</u>: Six Sigmaatany organizationssimply meansameasureofquality thatstrivesfor nearperfection. Sixsigmaisadisciplined,data-drivenapproachandmethodology for eliminating defects in any process from manufacturing to transactional and from product to service

Features of Six Sigma

- Six Sigma's aim is to eliminate waste and inefficiency, thereby increasing customer satisfaction by delivering what the customer is expecting.
- Six Sigma follows a structured methodology, and has defined roles for the participants.
- Six Sigma is a data driven methodology, and requires accurate data collection for the processes being analyzed.
- Six Sigma is about putting results on Financial Statements.
- Six Sigma is a business-driven, multi-dimensional structured approach for:
 - Improving Processes o Lowering Defects
 - Reducing process variability
 - > Reducing costs
 - Increasing customer satisfaction
 - > Increased profits

The word Sigma is a statistical term that measures how far a given process deviates from perfection. The central idea behind Six Sigma: If you can measure how many "defects" you have in a process, you can systematically figure out how to eliminate them and get as close to "zero defects" as possible and specifically it means a failure rate of 3.4 parts per million or 99.9997% perfect.

Key Concepts of Six Sigma

At its core, Six Sigma revolves around a few key concepts.

- Critical to Quality: Attributes most important to the customer.
- Defect: Failing to deliver what the customer wants.
- Process Capability: What your process can deliver.
- Variation: What the customer sees and feels.
- Stable Operations: Ensuring consistent, predictable processes to improve what the customer sees and feels.
- Design for Six Sigma: Designing to meet customer needs and process capability. Our Customers Feel the Variance, Not the Mean. So Six Sigma focuses first on reducing process variation and then on improving the process capability.

Myths about Six Sigma

There are several myths and misunderstandings surrounding Six Sigma. Some of them are given below:

- Six Sigma is only concerned with reducing defects.
- Six Sigma is a process for production or engineering.
- Six Sigma cannot be applied to engineering activities.
- Six Sigma uses difficult-to-understand statistics.
- Six Sigma is just training.

Benefits of Six Sigma Six Sigma offers six major benefits that attract companies:

- Generates sustained success
- Sets a performance goal for everyone
- Enhances value to customers
- Accelerates the rate of improvement
- Promotes learning and cross-pollination
- Executes strategic change

Key elements:

There are three key elements of Six Sigma Process Improvement:

- Customers
- Processes
- Employees
- 1. The Customers Customers define quality. They expect performance, reliability, competitive prices, on-time delivery, service, clear and correct transaction processing and more. This means it is important to provide what the customers need to gain customer delight.
- 2. The Processes Defining processes as well as defining their metrics and measures is the central aspect of Six Sigma. In a business, the quality should be looked from the customer's perspective and so we must look at a defined process from the outside-in. By understanding the transaction lifecycle from the customer's needs and processes, we can discover what they are seeing and feeling. This gives a chance to identify weak areas with in a process and then we can improve them.
- **3.** The Employees A company must involve all its employees in the Six Sigma program. Company must provide opportunities and incentives for employees to focus their talents and ability to satisfy customers. It is important to Six Sigma that all the team members should have a well-defined role with measurable objectives.

<u>Just – In – Time (JIT):</u>When components arrive as and when required in a manufacturing operating by workers. It is called just-in-time. Some we would at a stroke eliminate any inventory of parts, they would simply arrive just-in-time.

Similarly we could produce finished goods just-in-time to be handed to a customer who wants them. So at conceptual extremes. JIT has no need for inventory or stock, either of raw materials or work in progress or finished goods.

Supply Chain Management: It is the process of planning, implementing and controlling theoperations of the supply chain as efficiently as possible supply chain management spans all movement and storage of raw materials, work-in-process inventory, and finished goods from point-of-origin to point-of consumption.

Materials management

<u>Definition of Materials</u>: Materials refer to inputs into the production process, most of which are embodied in the finished goods being manufactured. It may be raw materials, work-in-progress, finished goods, spare parts and components, operating supplies such as lubricating oil, cleaning materials, and others, required for maintenance and repairs.

<u>Definition on Material Management</u>: Material management deals withcontrolling and regulating the flow of materials in relation to changes in variables like demand, prices, availability, quality, delivery schedules etc.

Objects of materials management:

- 1. Minimization of materials costs
- 2. To reduce inventory for use in production process and to develop high inventory turnover ratios
- 3. To procure materials of desired quality when required, at lowest possible overall cost of the country
- 4. To reduce paper work procedure in order to minimize delays in procuring materials.
- 5. To note changes in market conditions and other factors affecting the concern.
- 6. The purchase, receive, transport, store materials efficiently
- 7. To reduce cost, through simplification, standardization, value analysis etc
- 8. To conduct studies in new areas e.g., equality consumption and cost of materials so as to minimize cost of production

Function of Materials Management:

- 1. Materials planning and programming
- 2. Purchasing materials inspection of materials
- 3. Inspection of Materials
- 4. Classification, codification and standardization in stores
- 5. Storage of materials
- 6. Issuing of materials
- 7. Maintence of proper inventory records
- 8. Materials receiving

Inventory: It defined as a comprehensive list of movable items which are required for manufacturing the products and to maintain the plant facilities in working conditions.

Inventory Control: The systematic location, storage and recording of goods in such a way the desired degree of service can be made to the operating shops at minimum ultimate cost.

Objectives of Inventory Control:

- I. To support the production departments with materials of the right quality in the right quantity, at the right time and the right price, and from the right supplier
- II. To minimize investments in the materials by ensuring economies of storage and ordering costs
- III. To avoid accumulation of work in process
- IV. To ensure economy of costs by processing economic order quantities
- V. To maintain adequate inventories at the required sales outlets to meet the market needs promptly, thus avoiding both excessive stocks or shortages at any given time
- VI. To contribute directly to the overall profitability of the enterprise

Functions of inventory control:

- To develop policies, plans and standards essential to achieve the objectives
- To build up a logical and workable plan of organization for doing the job satisfactory
- To develop procedure and methods that will produce the desired results economically
- To provide the necessary physical facilities
- To maintain overall control by checking results and taking corrective actions.

Inventory Management System or Level:

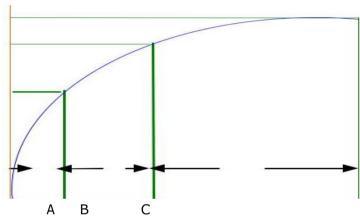

The objects of inventory control is to establish level of inventory which will serve to minimize the company's costs and maximize its revenue.

It is determined by five basic variables

- a) Minimum inventory
- b) Reorder point
- c) Recorder quantity
- d) Procurement lead time
- e) Maximum inventory.
- a) **Minimum inventory:** Minimum inventory or buffer stock is needed to take care of any temporary unpredictable increase in the part usage or in the procurement lead time.
- **b) Reorder point:** It is sufficiently above the minimum inventory to allow for issuing the purchase order and for delivery by a vendor. Reorder point stock level is equal to the minimum stock plus the expected consumption during the procurement lead time.

- **c) Reorder Quantity:** This is the fixed quantity of item for which order is placed every time the stock drops to the reorder point. This quantity is fixed either on the basis of experience or calculated.
- **d) Procurement lead time**: This comprises the time required for preparing the purchase order, the time gap between placing an order and receiving supplies and time required for inspection etc.
- **e) Maximum inventory**: It is approximately the sum of the order quantity and minimum inventory. It will exactly equal the sum of these two quantities if the ordered material is received just when the minimum stock is reached.

ABC Analysis: ABC analysis is a technique of controlling inventories based on their value and quantities. It is more remembered as an analysis for 'Always Better Control' of inventory. Here all items of the inventory are listed in the order of descending values, showing quantity held and their corresponding value. Then, the inventory is divided into three categories A, B and C based on their respective values.

Volume of inventory (Units)

- A Refers to high value item
- B Refers to medium value item
- C Refers to low value item

A category comprises of inventory, which is very costly and valuable. Normally 70% of the funds are tied up in such costly stocks, which would be around 10% of the total volume of stocks. Because the stocks in this category are very costly, these require strict monitoring on a day-to-day basis.

B category comprises of inventory, which is less costly. Twenty percent of the funds are tied up in such stocks and these accounts for over 20% of the volume of stocks. These items require monitoring on a weekly or fortnightly basis

C category consists of such stocks, which are of least cost. Volumewise, they form 70% of the total stocks but value-wise, they do not cost more than 10% of the investment in the stocks. This category of stocks can be monitored on a monthly or bi-monthly basis.

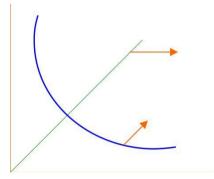

The following table summarizes the concept of ABC analysis;

			Desired Degree
Category	Value (%)	Volume (%)	of Control
A	70	10	STRICT
В	20	20	MODERATE
С	10	70	LOW

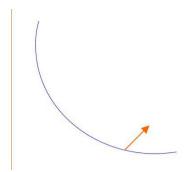

Economic Order Quantity (EOQ): Economic order quantity is defined that quantity of materials, which can be ordered at one time to minimize the cost of ordering and carrying the stocks. In other words, it refers to size of each order that keeps the total cost low.

Inventory costs: The inventory costs can be classified into two categories,

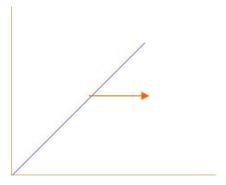

1) Inventory ordering cost 2) Inventory carrying cost.

Inventory Ordering Costs (Co): The cost refer to the cost incurred to procure the materials particularly in large organizations, these cost are significant. This is also called as procurement cost. Definition: It is the cost of placing an order from a vendor. This includes all costs incurred from calling for quotation to the point at which the item is taken into stock. Ex: Receiving quotations, Processing purchase requisition, Receiving materials and then inspecting it, Follow up and expediting purchase order, Processing sellers invoice.

Inventory Carrying cost: Carrying cost which are also known as holding costs are the costs incurred in maintaining the stores in the firm. They are based on average inventory and consist of: Ex: Storage cost includes: Rent for storage facilities, Salary of person and related storage expenses, Cost of insurance, Cost of capital.

Determine EOQ:

Step1: Total Ordering cost per year = No. of orders placed per year x ordering cost per Order = $(A/S) \times O$

A = Annual demand

S = Size of each order (units per order)

O = Ordering cost per order

Step2: Total Carrying cost per year = Average inventory level x Carrying cost per year = $(S/2) \times C$

A = Annual demand S = Size of each order (units per order) C = Carrying cost per unit

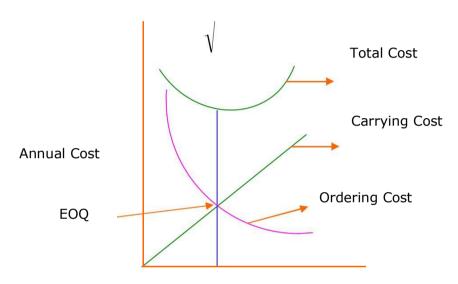

Step3:

EOQ is one where the total ordering is equal to total carrying cost

$$\frac{A}{S} \times O = \frac{S}{2} \times C$$

2AO = S²× C

2AO

Ordering Quantity

Where S is the Economic order quantity, A is the annual demand in units, O is the ordering cost per order and C is the carrying cost per unit

Ex: A biscuit manufacturing company buys a lot bags of 10,000 bags wheat per annum. The cost per bag is Rs.500 and ordering cost is Rs.400. The inventory carrying cost is estimated at 10% of the price of the wheat determine EOQ and number of orders required per year.

Solution: Annual demand (A) = 10,000 bags Ordering cost per order (O) = Rs.400 Carrying cost per unit (C) = 10% of Cost price = 0.10×500 = Rs.50/- C 2AO EOQ = $50.2 \times 10,000 \times 400 = 1,60,000$ EOQ = 400 bags

The number of orders to be placed during the year = EOQ Annualdemand(units) 25 orders $400\ 10,000 =$

In the above case, the company has to place 25 orders to optimize its ordering and carrying costs.

Method of pricing the materials issued: It is necessary to value the stocks at the end of the accounting period. These are different methods followed in different industries at different points of time for this purpose. The Methods are: 1. First in First out (FIFO)

- 2. Last in First out (LIFO)
- 3. Simple average price method
- 4. Weighted average price method

First in First Out (FIFO): In this system, the materials first received are issued first materials from the second lot are issued only, when first lot is exhausted and so on. The prices of the materials are charged at the cost at which that lot was purchased.

Last in First out (LIFO): In this system, the materials first received are issued first materials from the second lot are issued only when first lot is exhausted and so on. The prices of the materials are charged at the cost at which that lot was purchased.

Simple average price method: In this method, the stock are issued at an average price. The average price is determined by dividing the sum of the prices (at which the goods are received) by the number of price available.

Weighted average price method: This method is an improvement over simple average price. While calculating the average price, the quantities of each of the receipts are considered. The weighted average price is calculated as given below: Weighted average price = $1\ 2\ 3\ 1\ 1\ 2\ 2\ 3\ 3\ W\ WW\ (W\ P\)\ (W\ P\)\ (W\ P\)\ + + \times + \times + \times Where\ W1,\ W2,\ and\ W3\ refer to the quantities of each of the three receipts and P1, P2, and P3 are the prices of each of the receipts.$

Under this method, the quantity of each of the receipts is called the weight. Hence, the average price so computed is called the weighted average price. Weighted average is calculated after each time a purchase is made.

Purchasing: It deals with investment, overheads dealing with other and also result in server losses mass production industries that requires large purchasing for a continues flow of materials, demand for an efficient purchase decision. It implies procurement of raw materials machinery, service etc. needed for production and maintenance of the concern. It has several benefits in terms of reduced costs, higher inventory turnover, buying the materials at the best prices, turnover, buying the materials at the best prices, continues supplies, reduced lead time and so on.

Objectives: 1. To procure right material 2. To procure materials in desired quantities 3. To procure material of desired quality 4. Purchasing from reliable source 5. To pay less for materials purchased 6. To receive and deliver materials at right place and time. Purchasing process: The following are the logical steps in the purchasing process: 1. Requisitioning purchases 2. Exploring sources of supply 3. Issuing of tenders and obtaining quotations 4. Opening of tenders and quotations and preparation of comparative statement 5. Negotiating over the purchase price and terms of supply 6. Placing purchase order 7. Receiving of materials along with the invoice 8. Checking inward invoice 9. Inspecting and testing materials 10. Forwarding the materials to stores 11. Checking invoice and passing of bills for payments

Stores Management: It deals with planning, coordination and control of various activities pertaining or effective efficient and economic storage and store keeping.

Store: Generally, un worked material is known as store Storage: The store room is the place where stores are housed Storage: Storage is meant holding in custody all kinds of stores and materials semi-processed and fully processed products.

Store Keeping: It may be defined as that aspect of materials control concerned with physical storage of goods

Functions of stores: 1. To receive raw materials, semi-finished or purchased items from vendors and to check them for identification. 2. To receive parts and components which has been processed in the factory? 3. To make a record of material receipt and current status of material in the store 4. To maintain positioning of materials in the store. 5. To maintain stock safety and in good condition to ensure that they do not suffer from damage 6. Issuing the items/materials to operational personnel 7. Making a record of receipt and issue slips 8. To avoid illegal attics in store areas. 9. To plan for optimum utilization of space. 10.Cooperating to full extent which purchasing, manufacturing and production planning and control departments.

Stores Records: Material requisition note: Whenever the materials are required by a department/section, this form has to be filled in. This note provides information about the job number, description of the items required in terms of number. The head of the department/section should authorize it. Whenever the materials are issued, the receiving person should sign the note. This is to be entered in the materials issued record, which is to be signed by the storekeeper.

Purchase order: The purchasing officer will release the purchase order. The following is the format of a purchase order. Here, we find Vivek enterprises placing a purchase order on Business Solutions Ltd., for the following materials. The terms and conditions of the purchase order such as delivery, payment, and other have to be mentioned clearly.

Invoice: Invoice is a statement sent by the seller to the buyer mentioning the particulars of the goods supplied, net amount payable for the goods, and theterms and conditions governing the sale. It is very important document because it shows the net amount payable by the buyer after all the discounts and the taxes, if any. Goods received note: The goods received note furnishes the particulars of the suppliers, purchase order number, purchase requisition number, and the job for which the goods are received. These details are to be certified by a competent authority. On this basis, the accounts department initiates the process of payment for the goods received.

Goods returned note: Sometimes, a part or whole of the goods received may not be of acceptable quality, and hence, these have to be returned to the supplier. In this context, the goods received note is prepared. This is also called the 'debit note' because the suppliers or creditors' account has to be debited by the amount mentioned in this debit note for the goods returned.

Stores ledger account: This is maintained to provide the details of the quantity, price and amount of the receipts, issues, and balance of stocks on a day-to-day basis. At any given time, the physical quantity of stocks should match with the

balance as per the stores ledger account. A separate account is maintained for each type of the material in the stores.

It should necessarily mention the method such as FIFO or LIFO, followed to value the issues of stocks. It is a valuable tool for the costing department in exercising stores control. It facilitates the valuation of stock from time to time.

Bin card: Bin card is the slip or tag attached to the bin where the goods are stocked. Whenever the materials are received or issued, an entry is made on the bin card. The purpose of bin card is to reveal the particulars of the quantities received, issued, and available as on a given date at a glance. Where separate bins are maintained for each item of the store, each bin will have a tag hung to it.

Marketing management

Concept of Marketing

- (1) Production Concept
- (2) Product Concept
- (3) Selling Concept
- (4) Marketing Concept
- (5) Societal Marketing

Concept 1. Production Concept Those companies who believe in this philosophy think that if the goods/services are cheap and they can be made available at many places, there cannot be any problem regarding sale. Keeping in mind the same philosophy these companies put in all their marketing efforts in reducing the cost of production and strengthening their distribution system. In order to reduce the cost of production and to bring it down to theminimum level, these companies indulge in large scale production. This helps them in effecting the economics of the large scale production. Consequently, the cost of production per unit is reduced. The utility of this philosophy is apparent only when demand exceeds supply. Its greatest drawback is that it is not always necessary that the customer every time purchases the cheap and easily available goods or services.

- **2. Product Concept** Those companies who believe in this philosophy are of the opinion that if the quality of goods or services is of good standard, the customers can be easily attracted. The basis of this thinking is that the customers get attracted towards the products of good quality. On the basis of this philosophy or idea these companies direct their marketing efforts to increasing the quality of their product It is a firm belief of the followers of the product concept that the customers get attracted to the products of good quality. This is not the absolute truth because it is not the only basis of buying goods. The customers do take care of the price of the products, its availability, etc. A good quality product and high price can upset the budget of a customer. Therefore, it can be said that only the quality of the product is not the only way to the success of marketing.
- **3. Selling Concept** Those companies who believe in this concept think that leaving alone the customers will not help. Instead there is a need to attract the customers towards them. They think that goods are not bought but they have to be sold. The

basis of this thinking is that the customers can be attracted. Keeping in view this concept these companies concentrate their marketing efforts towards educating and attracting the customers. In such a case their main thinking is selling what you have'. This concept offers the idea that by repeated efforts one can sell-anything to the customers. This may be right for some time, but you cannot do it for a longtime. If you succeed in enticing the customer once, he cannot be won over every time.On the contrary, he will work for damaging your reputation. Therefore, it can be asserted that this philosophy offers only a short-term advantage and is not for long-term gains. 4. Marketing Concept Those companies who believe in this concept are of the opinion that success can be achieved only through consumer satisfaction. The basis of this thinking is that only those goods/service should be made available which the consumers want or desire and not the things which you can do.In other words, they do not sell what they can make but they make what they can sell. Keeping in mind this idea, these companies direct their marketing efforts to achieve consumer satisfaction. In short, it can be said that it is a modern concept and by adopting it profit canbe earned on a long-term basis. The drawback of this concept is that no attention is paid to social welfare.

5. Societal Marketing Concept This concept stresses not only the customer satisfaction but also gives importance to Consumer Welfare/Societal Welfare. This concept is almost a step further than the marketing concept. Under this concept, it is believed that mere satisfaction of the consumers would not help and the welfare of the whole society has to be kept in mind. For example, if a company produces a vehicle which consumes less petrol but spreads pollution, it will result in only consumer satisfaction and not the social welfare.

Primarily two elements are included under social welfare-high-level of human life and pollution free atmosphere. Therefore, the companies believing in this concept direct all their marketing efforts towards the achievement of consumer satisfaction and social welfare.

Channels of Distribution:

- A) Direct Channel or Zero Level Channels: When the manufacturer instead of selling the goods to the intermediary sells it directly to the consumer then this is known as Zero Level Channel. Retail outlets, mail order selling, internet selling and selling
- (B) Indirect Channels: When a manufacturer gets the help of one or more middlemen to move goods from the production place to the place of consumption, the distribution channel is called indirect channel.

Following are the main types of it:

- 1. One Level Channel: In this method an intermediary is used. Here a manufacturer sells the goods directly to the retailer instead of selling it to agents or wholesalers. This method is used for expensive watches and other like products. This method is also useful for selling FMCG (Fast Moving Consumer Goods
- 2. Two Level Channel: In this method a manufacturer sells the material to a wholesaler, the wholesaler to the retailer and then the retailer to the consumer. Here, the wholesaler after purchasing the material in large quantity from the manufacturer sells it in small quantity to the retailer. Then the retailers make the

products available to the consumers. This medium is mainly used to sell soap, tea, salt, cigarette, sugar, ghee etc.

3. Three Level Channel: Under this one more level is added to Two Level Channel in the form of agent. An agent facilitates to reduce the distance between the manufacturer and the wholesaler. Some big companies whocannot directly contact the wholesaler, they take the help of agents. Such companies appoint their agents in every region and sell the material to them. Then the agents sell the material to the wholesalers, the wholesaler to the retailer and in the end the retailer sells the material to the consumers.

Marketing mix Marketing Mix - A mixture of several ideas and plans followed by a marketing representative to promote a particular product or brand is called marketing mix. Several concepts and ideas combined together to formulate final strategies helpful in making a brand popular amongst the masses form marketing mix.

Elements of Marketing Mix

The elements of marketing mix are often called the four P's of marketing. Product Goods manufactured by organizations for the end-users are called products.

Products can be of two types - Tangible Product and Intangible Product (Services

An individual can see, touch and feel tangible products as compared to intangible products.

A product in a market place is something which a seller sells to the buyers in exchange of money.

Price The money which a buyer pays for a product is called as price of the product. The price of a product is indirectly proportional to its availability in the market. Lesser its availability, more would be its price and vice a versa. Retail stores which stock unique products (not available at any other store) quote a higher price from the buyers.

Place

Place refers to the location where the products are available and can be sold or purchased. Buyers can purchase products either from physical markets or from virtual markets. In a physical market, buyers and sellers can physically meet and interact with each other whereas in a virtual market buyers and sellers meet through internet.

Promotion

Promotion refers to the various strategies and ideas implemented by the marketers to make the end - users aware of their brand. Promotion includes various techniques employed to promote and make a brand popular amongst the masses.

Promotion can be through any of the following ways: Advertising Print media, Television, radio are effective ways to entice customers and make them aware of the brand's existence. Billboards, hoardings, banners installed intelligently at strategic locations like heavy traffic areas, crossings, railway stations, bus stands attract the passing individuals towards a particular brand. Taglines also increase the

recall value of the brand amongst the customers. Word of mouth One satisfied customer brings ten more customers along with him whereas one dis-satisfied customer takes away ten more customers. That's the importance of word of mouth. Positive word of mouth goes a long way in promoting brands amongst the customers.

Product mix: The term _product mix' implies all the products offered by a firm for sale. It may consist of one line products or several allied product lines. Product line refers to an assortment or class of similar or related products and services. They may be similar in technology, customersneeds, channel used, market served or in some other respect. An individual product in a line is known as a product item. There are several product items in a product line.

Product mix has three important aspects—width, depth and consistency. Width of the product mix is measured by the number and variety of product lines offered by a firm. It shows the degree of diversification of a firm's activities. The depth of product mix is determined by the number of items in a product line. By offering several brands of a product, a firm can cater to widely varying needs and tastes of customers and thereby beat its competitors. For instance, the range of bathing soaps (Lifebouy, Lux, Rexona, Liril, etc.) offered by Hindustan Lever Ltd. shows the depth of its product line while the width of its product mix consists of Dalda Vanaspati, Close-up Toothpaste, Talcum powder, etc. in addition to the soaps. The consistency of product mix refers to the degree of similarity between product lines in terms of their end-use, production requirements, price ranges, distribution channels, advertising media, etc. These dimensions of the product mix serve as guides to decisions regarding the additions and deletions of product items and line. By increasing the consistency of product mix, a firm can reduce its costs of operations and acquire unparalleled reputation in the market

Product life cycle:

Product life cycle theory divides the marketing of a product into four stages: introduction, growth, maturity and decline. When product life cycle is based on sales volume, introduction and growth often become one stage. For internationally available products, these three remaining stages include the effects of outsourcing and foreign production. When a product grows rapidly in a home market, it experiences saturation when low-wage countries imitate it and flood the international markets.

Afterward, a product declines as new, better products or products with new features repeat the cycle. General Theory

When a product is first introduced in a particular country, it sees rapid growth in sales volume because market demand is unsatisfied. As more people who want the product buy it, demand and sales level off. When demand has been satisfied, product sales decline to the level required for product replacement. In international markets, the product life cycle accelerates due to the presence of "follower" economies that rarely introduce new innovations but quickly imitate the successes of others. They introduce low-cost versions of the new product and precipitate a faster market saturation and decline.

Introduction:

When an organization has developed a product successfully, it will be introduced into the national (and international) outlet. In order to create demand, investments are made with respect to consumer awareness and promotion of the new product in order to get sales going. At this stage, profits are low and there are only few competitors. When more items of the product are sold, it will enter the next stage automatically.

Growth

An effectively marketed product meets a need in its target market. The supplier of the product has conducted market surveys and has established estimates for market size and composition. He introduces the product, and the identified need creates immediate demand that the supplier is ready to satisfy. Competition is low. Sales volume grows rapidly. This initial stage of the product life cycle is characterized by high prices, high profits and wide promotion of the product. International followers have not had time to develop imitations. The supplier of the product may export it, even into follower economies.

Maturity

In the maturity phase of the product life cycle, demand levels off and sales volume increases at a slower rate. Imitations appear in foreign markets and export sales decline. The original supplier may reduce prices to maintain market share and support sales. Profit margins decrease, but the business remains attractive because volume is high and costs, such as those related to development and promotion, are also lower.

Decline

In the final phase of the product life cycle, sales volume decreases and many such products are eventually phased out and discontinued. The follower economies have developed imitations as good as

the original product and are able to export them to the original supplier's home market, further depressing sales and prices. The original supplier can no longer produce the product competitively but can generate some return by cleaning out inventory and selling the remaining products at discontinueditems prices.

Product Life Cycle Stages example

It is a myth that every product has to go through each of the stages of the product life cycle. There are products that never get beyond the introduction stage, whereas other products remain in the maturity stage for a considerable length of time.

For example, the Philips light bulb was a product that found itself in the maturity stage for decades. The duration of each stage depends on demand, production costs and revenues. Low production costs and a high demand will ensure a longer product life. When production costs are high and there is a low demand for the product, it will not be offered on the market for a long time and, eventually, it will be withdrawn from the market via the **decline stage**.

<u>UNIT – III</u> <u>HUMAN RESOURCE MANGEMENT</u>

Behind the production of every product or service there is an human mind, effort and man hours (working hours). No product or service can be produced without help of human being. Human being is the fundamental resource for making or constructing anything. Today many experts claim that machines and technology are replacing human resource and minimising their role or effort. However, indeed, machines and technology are built by the humans; they need to be operated or at least monitored by humans. Maybe because of this reason, companies have continuously been searching for talented, skilled and qualified professionals to further develop latest machines and technology, which again have to be controlled or Monitored by humans to bring out products.

It is undisputed fact that humans are being replaced by artificial intelligence which means robots. But all jobs cannot be handed over to Robots, to say in other words robots have its own limitations and all roles cannot be handled by robots. Though British theoretical physicist Stephen Hawking, Cambridge professor expressed about destruction of middle-class jobs due to raise of artificial intelligence, he still felt that natural intelligence or need for application of human mind is inevitable in certain roles.

Meaning:

<u>Human Resource Management</u>: Human resource management is the process of managing the human resources of an organization in tune with the vision of the top management.

Human Resource Management is the process of recruitment and selecting employee, providing orientation and induction, training and development, assessment of employee (performance of appraisal), providing compensation and benefits, motivating, maintaining proper relations with employees and with trade unions, maintaining employees safety, welfare and healthy measures in compliance with labor laws of the land.

Why name 'Human Resource Management'?

Human: refers to the skilled workforce in the organisation.

Resource: refers to limited availability or scarceness.

Management: refers how to optimize and make best use of such limited and a scarce resource so as to meet the ordination goals and objectives.

Altogether, human resource management is the process of proper and maximise utilisation of available limited skilled workforce. The core purpose of the human resource management is to make efficient use of existing human resource in the organisation. The Best example at present situation is, construction industry has been facing serious shortage of skilled workforce. It is expected to triple in the next decade from the present 30 per cent, will negatively impact the overall productivity of the sector, warm industry experts.

Every organisations' desire is to have skilled and competent people to make their organisation more effective than their competitors. humans are very important assets for the organisation rather than land and buildings, without employees (humans) no activity in the organisation can be done. Machines are meant to to produce more goods with good quality but they should get operated by the human only.

Definitions:

Many great scholars had defined human resource management in different ways and with different words, but the core meaning of the human resource management deals with how to manage people or employees in the organisation.

Edwin Flippo defines- HRM as "planning, organizing, directing, controlling of procurement, development, compensation, integration, maintenance and separation of human resources to the end that individual, organizational and social objectives are achieved."

The National Institute of Personal Management (NIPM) of India has defined human resources – personal management as "that part of management which is concerned with people at work and with their relationship within an enterprise. Its aim is to bring together and develop into an effective organization of the men and women who make up enterprise and having regard for the well – being of the individuals and of working groups, to enable them to make their best contribution to its success".

Human Resource Management

For any organisation to function effectively, it must have resource of men (Human Resource), money, materials and machinery. The resources by themselves cannot fulfill the objectives of an organisation, they need to be collected, co-ordinated and utilised through human resources. And, the effective management of human resources is also vital. Hence, Human Resource Management (HRM) has emerged as a major function in organisations. Human Resource Management is the organizational function that deals with issues related to people such as compensation, hiring, performance management, organization development, safety, wellness, benefits, employee motivation, communication, administration, and training.

The administrative discipline of hiring and developing employees so that they become more valuable to the organization.

Human Resource management includes:

- 1. conducting job analyses,
- 2. planning personnel needs, and recruitment,
- 3. selecting the right people for the job,
- 4. orienting and training,
- 5. determining and managing wages and salaries,
- 6. providing benefits and incentives,
- 7. appraising performance,
- 8. resolving disputes,
- 9. communicating with all employees at all levels. Formerly called personnel management.
- 10. Maintaining awareness of and compliance with local, state and federal labor laws.
- 11. These are also called as functions of human resource management for the purpose of effect you utilization of human resource.

Objectives of HRM

Societal objective. To be socially responsible to the needs and challenges of society while minimizing the negative impact of such demands upon the organization. The failure of organizations to use their resources for society's benefit may result in restrictions. For example, societies may pass laws that limit human resource decisions.

Organizational objective. To recognize that HRM exists to contribute to organizational effectiveness. HRM is not an end in itself; it is only a means to assist the organization with its primary objectives. Simply stated, the department exists to serve the rest of the organization. Functional objective.To maintain the department's contribution at a level appropriate to the organisation's needs. Resources are wasted when HRM is more or less sophisticated than the organisation demands. A department's level of service must be appropriate for the organisation it serves.

Personal objective. To assist employees in achieving their personal goals, at least insofar as these goals enhance the individual's contribution to the organisation. Personal objectives of employees must be met if workers are to be maintained, retained and motivated. Otherwise, employee performance and satisfaction may decline, and employees may leave the organisation.

Nature of Human Resource Management

Human Resource Management involves management functions like planning, organizing, directing and controlling

- It involves procurement, development, maintenance of human resource
- It helps to achieve individual, organizational and social objectives
- Human Resource Management is a multidisciplinary subject. It includes the study of management, psychology, communication, economics and sociology.
- It involves team spirit and team work.
- It is a continuous process.

Why Is Human Resource Management Important to All Managers? Why are these concepts and techniques important to all managers? 'Perhaps it's easier to answer this by listing some of the personnel mistakes you don't want to make while managing. For example, you don't want to: Hire the wrong person for the job

- Experience high turnover
- Have your people not doing their best
- Waste time with useless interviews
- Have your company taken to court because of discriminatory actions
- Have your company cited under federal occupational safety laws for unsafe practices

- Have some employees think their salaries are unfair and inequitable relative to others in the organization
- Allow a lack of training to undermine your department's effectiveness
- Commit any unfair labor practices

Who is HR manager?

The Human Resource Manager is a mid-level position responsible for overseeing human resources activities and policies according to executive level direction. They supervise human resources staff as well as

control <u>compensation</u> and <u>benefits</u>, employee relations, staffing, <u>training</u>, safety, <u>labor relations</u>, and employment records.

Key responsibilities of Human Resource Manager.

Human Resource Manager is one of the most important key to open a lock hanging on the door of success in an organisation. If an Human Resource Manager is efficient enough to handle and to take out best from his team members any oragnisation and can achieve more from his target goals. Human Resource manager plays an very important role in hierarchy, and also in between the higher management and low level employees. Stated below are major responsibilities of Human Resource Manager:-

www.whatishumanresource.com

Scope of Human Resource Management

The scope of Human Resource Management refers to all the activities that come under the banner of Human Resource Management. These activities are as follows.

- **Human resources planning :-** <u>Human resource planning</u> or Human Resource Planning refers to a process by which the company to identify the number of jobs vacant, whether the company has excess staff or shortage of staff and to deal with this excess or shortage.
- **Job analysis design :-** Another important area of Human Resource Management is <u>job analysis</u>. Job analysis gives a detailed explanation about each and every job in the company.
- Recruitment and selection: Based on information collected from job analysis the company prepares advertisements and publishes them in the newspapers. This is <u>recruitment</u>. A number of applications are received after the advertisement is published, interviews are conducted and the right employee is selected thus recruitment and <u>selection</u> are yet another important area of Human Resource Management.
- **Orientation and induction :-** Once the employees have been selected an <u>induction</u> or <u>orientation program</u> is conducted. This is another important area of Human Resource Management. The employees are informed about the background of the company, explain about the organizational culture and values and work ethics and introduce to the other employees.
- Training and development: Every employee goes under training program which helps him to put up a better performance on the job.
 Training program is also conducted for existing staff that have a lot of

experience. This is called refresher training. Training and development is one area where the company spends a huge amount.

- **Performance appraisal :-** Once the employee has put in around 1 year of service, <u>performance appraisal</u> is conducted that is the Human Resource department checks the performance of the employee. Based on these appraisal future promotions, incentives, increments in salary are decided.
- Compensation planning and remuneration: There are various rules regarding compensation and other benefits. It is the job of the Human Resource department to look into remuneration and compensation planning.
- Motivation, welfare, health and safety: Motivation becomes important to sustain the number of employees in the company. It is the job of the Human Resource department to look into the different methods of motivation. Apart from this certain health and safety regulations have to be followed for the benefits of the employees. This is also handled by the HR department.
- **Industrial relations :-** Another important area of Human Resource Management is maintaining co-ordinal relations with the union members. This will help the organization to prevent <u>strikes lockouts</u> and ensure smooth working in the company.

The Human Resource Officer is responsible for providing support in the various human resource functions, which include recruitment, staffing, training and development, performance monitoring and employee counseling.

Personnel Management:

Personnel Management - Personnel Management is basically an administrative record-keeping function, at the operational level. Personnel Management attempts to maintain fair terms and conditions of employment, while at the same time, efficiently managing personnel activities for individual departments etc. It is assumed that the outcomes from providing justice and achieving efficiency in the management of personnel activities will result ultimately in achieving organizational success.

Defines personnel management as the planning, organizing, and controlling of the procurement, development, compensation, integration and maintenance of people for the purpose of contributing to the organizational goals.

Personal management versus Human resource management:

HRM has a long history of growing from a simple welfare and maintenance function to that of a board level activity of the companies. In recent years, the focus on people management from human capital/intellectual capital perspective is

also shaping firmly. However, the hard fact is that this growth can be generally witnessed in management literature and rarely in practice. Peripheral observation of people management in organization can mislead the observers since, hardly there could be any organization that is yet to rename its old fashioned title of industrial relations/ personnel /welfare/ administration department into HRM department. But, in practice, these organizations continue to handle the people management activities the way they had been handling earlier. The reasons for this could be many and varied. Among them, the potential reason is lack of clear understanding about the differences between personnel/IR and HRM.

BASIS FOR COMPARISO N	PERSONNEL MANAGEMENT	HUMAN RESOURCE MANAGEMENT
Meaning	The aspect of management that is concerned with the work force and their relationship with the entity is known as Personnel Management.	The branch of management that focuses on the most effective use of the manpower of an entity, to achieve the organizational goals is known as Human Resource Management.
Approach	Traditional	Modern
Treatment of manpower	Machines or Tools	Asset
Type of function	Routine function	Strategic function
Basis of Pay	Job Evaluation	Performance Evaluation
Management Role	Transactional	Transformational

Communicatio n	Indirect	Direct
Labor Management	Collective Bargaining Contracts	Individual Contracts
Initiatives	Piecemeal	Integrated
Management Actions	Procedure	Business needs
Decision Making	Slow	Fast
Job Design	Division of Labor	Groups/Teams
Focus	Primarily on mundane activities like employee hiring, remunerating, training, and harmony.	Treat manpower of the organization as valued assets, to be valued, used and preserved.

1. Personnel management function is often viewed as a function of the specialized staff.

Human resource management function is the responsibility of all the line managers in the organization.

- 2. Personnel management goal is employee orientation

 Human resource management goal is organization orientation
- 3. Personnel management managerial function
 Human resource management operative function
 - 4.Personnel management cooperative level manager concern Human resource management top level manager concern.

Personnel Management and Industrial Relations:

The word personnel management is popular with different names, such as staff management, labour management, manpower management, industrial relations and modern times as human resources management. Industrial relations refer to the relation between the employees and management.

Features in Personnel Management:

- 1. Personnel management is concerned with managing people at all level in the organization
- 2. It is concerned with employees both as individuals and as a group
- 3. It is a method of helping the employees to identify and develop their potential.
- 4. It is a method of channelising this potential for the attainment of organizational goals.

It is required in very organization, in the form of the services of the personnel manager.

Characteristics of personnel management:

<u>Maximum individual development</u>: This principle stresses on the development of every person working in an organization. Workers are able to fulfill the objectives of an organization with the minimum cost. Hence, the employees in the organization should be properly developed. By this, employees will be able to develop themselves to the maximum extent of their capabilities. Their ability, productivity and efficiency can be used for achieving the objectives of the organization.

<u>Scientific selection</u>: For the proper co-ordination between work and workers, it is necessary to select the right person for the right job. Workers should be selected after a careful weighing of the requirements of the jobs on the other hand, and assessment and evaluation of the abilities and attitudes of man on the other.

<u>High morale</u>: It is necessary to have high morale among the workers in an organization. For this purpose, ideal wage policy should be offered in the organization. Workers should be motivated by monetary and non-monetary incentives.

<u>Dignity of labour</u>: Human resource management specially act, so that the workers feel proud of their work or labour. Sometimes, like 'work is worship' notion should be developed in workers. This principle requires treating every job and every jobholder with dignity and respect.

Team spirit: Team spirit must be developed in the workers. They should work

collectively and they should feel collective responsibility for the attainment of the objectives of the organization. For this purpose, workers must have the sense of cooperation, unity and mutual trust.

<u>Effective communication</u>: There must be effective channel of communication between the management and the workers. The orders of higher authorities should reach the workers, while worker's request and grievances should reach the higher authorities in a proper way. If communication system is not effective, then there will arise complex problem like mistrust, hatred and ill-will, and this in turn affects the production of the organization.

<u>Fair remuneration</u>: Labour should be given fair and proper compensation for the work they rendered. They should also be given fair incentives or rewards to recognize good performance. This develops industrial peace.

<u>Effective utilization of human resources</u>: The skills and abilities of human resources should be effectively utilized. Proper training facilities should be provided to workers. Human resource management is an art to get the work done by the people, to get the desired result. For this employees should be given humanly treatment in the organization.

<u>Participation</u>: This principle emphasizes the idea of labour participation in the management of the enterprise. Workers participation in management aims at increasing productivity of labour by improving co-operation between employer and employees.

<u>Contribution to national prosperity</u>: This principle stresses to provide a higher purpose of work to all employees and to contribute to national prosperity. For this purpose, human resource management should develop the sense of participation in labour to make them realize that their efforts alone can contribute to the prosperity of the organization and of the country

Human Resource Development

Human Resource Development is the part of <u>human resource management</u> that specifically deals with <u>training and development</u> of the employees in the organization.

Human resource development includes training a person after he or she is first

hired, providing opportunities to learn new skills, distributing resources that are beneficial for the employee's tasks, and any other developmental activities.

INTRODUCTION

Development of human resources is essential for any organisation that would like to be dynamic and growth-oriented. Unlike other resources, human resources have rather unlimited potential capabilities. The potential can be used only by creating a climate that can continuously identify, bring to surface, nurture and use the capabilities of people. Human Resrouce Development (HRD) system aims at creating such a climate. A number of HRD techniques have been developed in recent years to perform the above task based on certain principles. This unit provides an understanding of the concept of HRD system, related mechanisms and the changing boundaries of HRD.

HRD concept was first introduced by **Leonard Nadler** in 1969 in a conference in US. "He defined HRD as those learning experience which are organized, for a specific time, and designed to bring about the possibility of behavioral change".

Human Resource Development (HRD) is the framework for helping employees develop their personal and organizational skills, knowledge, and abilities. Human Resource Development includes such opportunities as employee training, employee career development, performance management and development, coaching, mentoring, succession planning, key employee identification, tuition assistance, and organization development.

The focus of all aspects of Human Resource Development is on developing the most superior workforce so that the organization and individual employees can accomplish their work goals in service to customers.

Human Resource Development can be formal such as in classroom training, a college course, or an organizational planned change effort. Or, Human Resource Development can be informal as in employee coaching by a manager. Healthy organizations believe in Human Resource Development and cover all of these bases.

Definitions of HRD

HRD (Human Resources Development) has been defined by various scholars in various ways. Some of the important definitions of HRD (Human Resources Development) are as follows:

 According to Leonard Nadler, "Human resource development is a series of organised activities, conducted within a specialised time and designed to produce behavioural changes."

- In the words of **Prof. T.V. Rao**, "HRD is a process by which the employees of an organisation are helped in a continuous and planned way to (i) acquire or sharpen capabilities required to perform various functions associated with their present or expected future roles; (ii) develop their journal capabilities as individual and discover and exploit their own inner potential for their own and /or organisational development purposes; (iii) develop an organisational culture in which superior-subordinate relationship, team work and collaboration among sub-units are strong and contribute to the professional well being, motivation and pride of employees."
- According to M.M. Khan, "Human resource development is the across of increasing knowledge, capabilities and positive work attitudes of all people working at all levels in a business undertaking."

THE CONCEPT OF HUMAN RESOURCE DEVELOPMENT

Human resource development in the organisation context is a process by which the employees of an organisation are helped, in a continuous and planned way to:

- 1. Acquire or sharpen capabilities required to perform various functions associated with their present or expected future roles;
- 2. Develop their general capabilities as individuals and discover and exploit their own inner potentials for their own and/or organisational development purposes; and
- 3. Develop an organisational culture in which supervisor-subordinate relationships, teamwork and collaboration among sub-units are strong and contribute to the professional well being, motivation and pride of employees.

This definition of HRD is limited to the organisational context. In the context of a state or nation it would differ.

HRD is a process, not merely a set of mechanisms and techniques. The mechanisms and techniques such as performance appraisal, counselling, training, and organization development interventions are used to initiate, facilitate, and promote this process in a continuous way. Because the process has no limit, the mechanisms may need to be examined periodically to see whether they are promoting or hindering the process. Organisations can facilitate this process of development by planning for it, by allocating organisational resources for the purpose, and by exemplifying an HRD philosophy that values human beings and promotes

Difference between HRD and HRM

Both are very important concepts of management specifically related with human resources of organisation. Human resource management and human resource

development can be differentiated on the following grounds:

- The human resource management is mainly maintenance oriented whereas human resource development is development oriented.
- rganisation structure in case of human resources management is independent whereas human resource development creates a structure, which is inter-dependent and inter-related.
- Human resource management mainly aims to improve the efficiency of the employees whereas aims at the development of the employees as well as organisation as a whole.
- Responsibility of human resource development is given to the personnel/human resource management department and specifically to personnel manager whereas responsibility of HRD is given to all managers at various levels of the organisation.
- HRM motivates the employees by giving them monetary incentives or rewards whereas human resource development stresses on motivating people by satisfying higher-order needs.

THE NEED FOR HRD

HRD is needed by any organisation that wants to be dynamic and growth-oriented or to succeed in a fast-changing environment. Organisations can become dynamic and grow only through the efforts and competencies of their human resources. Personnel policies can keep the morale and motivation of employees high, but these efforts are not enough to make the organisation dynamic and take it in new directions. Employee capabilities must continuously be acquired, sharpened, and used. For this purpose, an "enabling" organisational culture is essential. When employees use their initiative, take risks, experiment, innovate, and make things happen, the organisation may be said to have an "enabling" culture.

Even an organisation that has reached its limit of growth, needs to adapt to the changing environment. No organisation is immune to the need for processes that help to acquire and increase its capabilities for stability and renewal.

HRD FUNCTIONS

The core of the concept of HRS is that of development of human beings, or HRD. The concept of development should cover not only the individual but also other units in the organisation. In addition to developing the individual, attention needs

to be given to the development of stronger dyads, i.e., two-person groups of the employee and his boss. Such dyads are the basic units of working in the organisation. Besides several groups like committees, task groups, etc. also require attention. Development of such groups should be from the point of view of increasing collaboration amongst people working in the organisation, thus making for an effective decision-making. Finally, the entire department and the entire organisation also should be covered by development. Their development would involve developing a climate conducive for their effectiveness, developing self-renewing mechanisms in the organisations so that they are able to adjust and proact, and developing relevant processes which contribute to their effectiveness.

Hence, the goals of the HRD systems are to develop:

- 1. The capabilities of each employee as an individual.
- 2. The capabilities of each individual in relation to his or her present role.
- 3. The capabilities of each employee in relation to his or her expected future role(s).
- 4. The dyadic relationship between each employee and his or her supervisor.
- 5. The team spirit and functioning in every organisational unit (department, group, etc.).
- 6. Collaboration among different units of the organisation.
- 7. The organisation's overall health and self-renewing capabilities which, in turn, increase the enabling capabilities of individuals, dyads, teams, and the entire organisation.

Features of Human Resource development

The essential features of human resource development can be listed as follows:

- Human resource development is a process in which employees of the organisations are recognized as its human resource. It believes that human resource is most valuable asset of the organisation.
- It stresses on development of human resources of the organisation. It helps the employees of the organisation to develop their general capabilities in relation to their present jobs and expected future role.
- It emphasise on the development and best utilization of the capabilities of individuals in the interest of the employees and organisation.
- It helps is establishing/developing better inter-personal relations. It stresses on developing relationship based on help, trust and confidence.
- It promotes team spirit among employees.

- It tries to develop competencies at the organisation level. It stresses on providing healthy climate for development in the organisation.
- HRD is a system. It has several sub-systems. All these sub-systems are inter-related and interwoven. It stresses on collaboration among all the subsystems.
- It aims to develop an organisational culture in which there is good seniorsubordinate relations, motivation, quality and sense of belonging.
- It tries to develop competence at individual, inter-personal, group and organisational level to meet organisational goal.
- It is an inter-disciplinary concept. It is based on the concepts, ideas and principles of sociology, psychology, economics etc.
- It form on employee welfare and quality of work life. It tries to examine/identify employee needs and meeting them to the best possible extent.
- It is a continuous and systematic learning process. Development is a life long process, which never ends.

Benefits of Human Resource Development

Human resource development now a days is considered as the key to higher productivity, better relations and greater profitability for any organisation. Appropriate HRD provides unlimited benefits to the concerned organisation. Some of the important benefits are being given here:

- HRD (Human Resource Development) makes people more competent. HRD develops new skill, knowledge and attitude of the people in the concern organisations.
- With appropriate HRD programme, people become more committed to their jobs. People are assessed on the basis of their performance by having a acceptable performance appraisal system.
- An environment of trust and respect can be created with the help of human resource development.
- Acceptability toward change can be created with the help of HRD. Employees found themselves better equipped with problem-solving capabilities.

- It improves the all round growth of the employees. HRD also improves team spirit in the organisation. They become more open in their behaviour. Thus, new values can be generated.
- It also helps to create the efficiency culture In the organisation. It leads to greater organisational effectiveness. Resources are properly utilised and goals are achieved in a better way.
- It improves the participation of worker in the organisation. This improve the role of worker and workers feel a sense of pride and achievement while performing their jobs.
- It also helps to collect useful and objective data on employees programmes and policies which further facilitate better human resource planning.
- Hence, it can be concluded that HRD provides a lot of benefits in every organisation. So, the importance of concept of HRD should be recognised and given a place of eminence, to face the present and future challenges in the organisation.

Functions of human resource Management:

Managerial Function Operative Functions

Planning Procurement of personnel

Organizing Development of personnel

Staffing Compensation of personnel

Motivating Employees benefits schemes

Controlling Maintaining good industrial relations

Record keeping

Personnel planning and evaluation

Personnel research and audit

Managerial Function:

Planning: It is concerned with manpower planning

- 1. To forecast future vacancies
- 2. To anticipate retirements promotions and transfer
- 3. Preparing job analysis, job description and job specifications
- 4. Analyzing resources of potential employees

Organizing: It is concerned with organizing manpower

- 1. To analysis organization structure
- 2. Recommending organizational changes
- 3. To analyze applications and determine suitability of candidates
- 4. Interviewing conducting test
- 5. Investigating references
- 6. Arranging medical examination

<u>Staffing</u>: Staffing comprises these are functions induction, transfer/promotion, Manpower development and training.

Induction: To ensure new recruits are provided with appropriate training,

- 1. Orienting new employees into their jobs
- 2. Reviewing their performances
- 3. Ascertaining training requirements

<u>Transfer/Promotion</u>: To utilize employees enhanced capabilities

- 1. Continuously analyzing job description
- 2. Evaluating employee qualification/performance
- 3. Determining further training requirement

Manpower development: To provide individual employees development

- 1. Developing performance standards
- 2. Appraising performance
- 3. Planning individual development program <u>Training</u>:

<u>Training</u>: It includes the followings

- 1. Conducting training program
- 2. Evaluating training results.

<u>Motivating</u>: Motivating comprises these are the functions payment recreation, communication, health and safety.

<u>Payment</u>: To set pay scales for different job positions and considering pay scales in other organization

- 1. Analyzing jobs as per job description
- 2. Evaluating such jobs
- 3. Develop scales

Recreation: To provide facilities for enjoyment

- 1. Conducting social activities
- 2. Sports and games
- 3. Recreational activities

<u>Communication</u>: To provide needed exchange of information throughout the organization.

- 1. Developing channels and media of information system
- 2. Introducing suggestion scheme
- 3. Conducting opinion surveys

Health and safety: Prevent diseases and provide security measures

- 1. Providing medical facilities
- 2. Providing safety measures

<u>Controlling</u>: Controlling comprises these are the functions performances appraisal, security, employees' attitude and coordination.

<u>Performance appraisal</u>: To appraise performance as per their duties and responsibilities

- 1. Developing performance evaluating system
- 2. Conducting performance evaluating interviews
- 3. Analyzing evaluation results

Security: To provide precautionary measure to prevent theft, fire etc.

- 1. To develop and implement security measures
- 2. To provide watchman
- 3. To organize fire fighting training

<u>Employee attitude and coordination</u>: To improve employees attitude and coordination of work.

- 1. Analyzing personal problems arrange consulting
- 2. Implement improved practices

Operative Functions:

<u>Procurement of personnel</u>: It deal with determination of man power requirement, their recruitment, selection, placement and orientation <u>Development of personnel</u>: After personnel have been obtained, they must to some degree be developed before going to work. Development has to do with the increase of skill, through training that is necessary for proper job performance.

<u>Compensation of personnel</u>: Compensation means, determination of adequate and equitable remuneration of personnel for their contribution to organization objectives.

<u>Record keeping</u>: In this system personnel manager collets and maintain information which is concerned with the staff of the organization

<u>Personnel planning and evaluation</u>: Under this system different types of activities are evaluated such as evaluation of performances personnel policy of an organization and its practices, personnel audit, moral survey and performance appraisal etc.

<u>Personnel research and audit</u>: This function is concerned with the research in motivational techniques and auditing.

Job Analysis: Job analysis can be defined as the process of identifying the tasks comprising a particular job to assess whether they could be organized in a productive manner. This will identify the main features of the job, the major tasks undertaken, the results to be achieved, and how one job is related to the other jobs in the organizational hierarchy. The product of job analysis is job description.

Job Description: Job description is an accurate and concise description of

(a) the overall purposes of the job (b) the principal duties of the person doing this job. The job description emphasizes the job requirements. Clear job description constitutes the basis for advertising the vacancy positions and for drawing up job specifications. Once individuals are selected to the posts, job description allows them to know exactly what their roles are and what is expected of them.

Job Specification

Job specification identifies the requirements on the part of the person to perform the given job. It provides the interviewer an understanding of the job and helps him to assess the qualities necessary for its performance to an acceptable standard, at the time of interview. This helps him to compare the performance of candidates objectively and to eliminate unsuitable candidates.

<u>Manpower Planning</u>: It is the scientific process of evolving the right quantity of right men to be required in future at right time on the right job.

<u>Definition</u>: Manpower planning may be defined as a rational method of assessing the requirements of human resources at different levels in the organization. It ends with proposals for recruitment, retention, or even dismissal, where necessary.

Objectives of Manpower Planning:

- 1. Making correct estimate of manpower requirement
- 2. Managing the manpower according to the need of enterprises
- 3. Helps in recruitment and selection
- 4. Maintaining production level

- 5. Making employees development programme effecting
- 6. Establishing industrial peace
- 7. Reduction in labour costs
- 8. Minimization of labour costs.

Recruitment: Applications are invited at this stage for further scrutiny and short listing. Before advertising for the position, it common to check up of the position could be filled in internally.

Selection: The process of identifying the most suitable persons for the organization is called selection. Selection is also called a negative function because at a stage the applications are screened and short-listed based on the selection criteria. The main purpose of selection is to choose the right person for the right job. The job analysis, job description, and job specifications are carried out before the position is advertised. These provide adequate insight about nature of the job, its description, and its specifications and further focus on what type of person is to be selected for a given position. These simplify the process of selection.

Selection process involves the following stages:

- I. Initial screening/Short listing
- II. Comprehensive application/bio data screening
- III. Aptitude or written rests
- IV. Group discussion
- V. Personal interviews
- VI. Group discussion
- VII. Personal interviews
- VIII. Medical examination
 - IX. Employment offer letter

Training and development

<u>Training</u>: Training is short-term process of utilizing systematic and organized procedure by which the staff acquires specific technical knowledge and functional skills for a definite purpose. The focus of training is the job or task.

Training Needs:

- -High turnover among the new recruits
- -Increase in wastage of materials
- -Increase in the number of rejected units of production
- -Increase in the number of customer complaints
- -Increase in the accident rate
- -Reduced productivity levels
- -Increase in machine breakdowns

Methods of Training: There are two methods of training

- A. On-the job training
- B. Off-the job training
- A) On-the job training: It is designed to make the employees immediately productive. It is learning by physically doing the work. The focus here is to provide specific skills in a real situation. These methods include:
- 1)Job instruction training: This is a method used for such jobs which can be performed with relatively low skill. Here, the trainees systematically acquire skills by following routine instructions in key processes from a qualified instructor.
- <u>2) Experiential learning</u>: This is a modern approach to the learning process. This method is more . used for training the senior executives. It is a technique, which empowers the manager-trainee with the freedom of choice to act upon and the capacity to initiate, rather than simply respond, to circumstances.
- <u>3) Demonstration</u>: Here, the work procedures are demonstrated to the trainees. Each of the trainees is asked to carry out the work, on a sample basis, based on his/her observation and understanding of the demonstration.
- 4) Apprentice training: Those who are selected to work in the shop floor are trained as apprentices in the factory for a brief period ranging from three months to one year, depending upon the complexity of the training. Those who show good progress in this training are likely to be absorbed in the same organization. Those who complete apprentice training are likely to get good jobs outside also.
- B) Off-the-job training methods: provide a relatively broad idea relating to a given job or task. These are meant for developing an understanding of general

principles, providing background knowledge, or generating an awareness of comparative ideas and practice. These methods include:

- 1) <u>Lectures/talks and class room instructions</u>: These techniques are designed to communicate specific interpersonal, technical, or problem-solving skills. Here, the trainer can maintain a tight control over learning. However, this method restricts the trainee's freedom to develop his/her own approaches to learning.
- 2) <u>Conferences</u>: Conferences refer to get-together of the experts from different areas of a given topic. These experts present their views based on their work experience and research results. When employees participate in such events they get a feel of the real world. They may also get motivated to perform better.
- 3) <u>Seminars</u>: Seminars are held periodically by the professional organisations for the benefit of all the practicing managers by taking into consideration the recent advances in a specialized area. Participation in such seminars enables the executives to get exposed to the recent developments in the area of their interest.
- 4) <u>Team discussions</u>: This technique develops team spirit among the executives from different departments. It also enables them to understand and appreciate each other's problems. It reinforces a feeling of unity among those who work towards common goals.
- <u>5) Case study</u>: This is a predominant technique followed even in premier management institutes. This technique helps to provide an understanding of what has gone wrong in a particular case, such as Delhi Cloth Mills (DCM). Similarly, what are the factors responsible for the success of organizations such as Reliance or Hindustan Lever. Case study technique is a very good method of learning the principles and concepts. However, this method has one weakness. The circumstances you are likely to face in your life may be very different from the cases you have analyzed earlier! Case studies help to enhance the analytical & decision making skills.

<u>Role-playing</u>: The participants are assigned roles and are asked to react to one another, as they would do in their managerial jobs. These roles are eventually exchanged. In other words, each participant will get a turn to play all the roles. For instance, the role-playing in a grievance-handling situation involves two players: In the first step, the worker presents his grievance to the personnel manager. In the

second step, the worker plays the role of the personnel manager while the personnel manager plays the role of the worker. Role-playing allows participants to understand problems of each other. It enhances the interpersonal-handling skills.

<u>Programmed instruction</u>: It is a system of instruction within which pre-established subject matter is broken into small, discrete steps and carefully organized into logical sequence in which, it can be learned by the trainee. Each step is built upon the previous one. The programmed instruction techniques can be in the form of programmed tests and manuals, or video displays. For instance, withdrawal of money through automatic teller machines (ATMs) involves responding to programmed instructions; working on a personal computer or internet involves responding to a series of programmed instructions.

<u>Simulation exercises</u>: These include interactive exercises in which trainees practice their skills on working models or in mock situations based on real-life situations.

<u>Group decision-making</u>: Group decision-making refers to the process of making decisions based on the opinions expressed by all the concerned — may be subordinates, peers, or outside consultants. The manager thus ensures that more people are involved in taking decisions. Each member of the group will accept the responsibility for the decisions made as he is a party to it. This method facilitates to generate more alternative solutions to a given problem because more people are involved in the thinking exercise. This facilitates coordination among the groups also.

<u>Development</u>: Development is an activity aimed at career growth rather than immediate performance. Employee development is the process, which helps him or her to understand and interpret knowledge rather than teaching a specific set of functional skills. Development, therefore, focuses more on employee's personal growth in the near future.

<u>Placement:</u> After training, the employee is placed in his/her position under the charge of a manager. The new recruit is allowed to exercise full authority and is held responsible for the results.

a) <u>Promotion</u>: Promotion refers to the advancement of an employee to a job with a higher authority and responsibility. It may also carry a better compensation package. Promotion can also be viewed as a means of filling up vacancies in the organization occurring from time to time.

- b) <u>Demotion</u>: Where an employee is not in a position to perform a given job, he may be demoted or transferred to a position with a lower authority and salary. In other words, demotion is a punishment.
- c) <u>Transfer</u>: It is a lateral shift that moves an individual employee from one position to another. It may be in the same department, or to a different department or location. This does not involve any changes in the duties, responsibilities, or skills needed. The salary benefits also may remain the same.
- d) <u>Separation</u>: Separation refers to termination of employment. In other words, the employee is separated from his job. In case of misconduct or misbehavior, where the employee is not in a position to improve his performance despite notice, his/her employment is terminated. This is also called dismissal.
- e) <u>Absenteeism</u>: Absenteeism refers to the practice of an employee who does not report to work for any particular reason. Absenteeism affects the productivity adversely. It becomes difficult for the departments to cope up with the work pressures, if any particular employee is absent. As a measure of control, the employees are not allowed to be absent without prior permission from the management.

<u>Wages and Salary Administration</u>: Wages and salary administration is the process of fixing wages/salary for different jobs in the organization through job evaluation, negotiations with the unions, and so on.

<u>Grievance Handling</u>: A complaint from employees, when ignored, takes the form of a grievance. Grievance is a complaint genuine or otherwise, about any issue relating to the job such as about supervisor, wages, working conditions and so on. It is necessary to create an in-build mechanism to redress the grievances, at the earliest, at the departmental level. If the individual grievances are ignored, they may take the form of industrial disputes.

A grievance is any dissatisfaction or feeling of injustice having connection with one's employment situation which is brought to the attention of management. Speaking broadly, a grievance is any dissatisfaction that adversely affects organizational

relations and productivity. To understand what a grievance is, it is necessary to distinguish between dissatisfaction, complaint, and grievance.

- Dissatisfaction is anything that disturbs an employee, whether or not the unrest is expressed in words.
- Complaint is a spoken or written dissatisfaction brought to the attention of the supervisor or the shop steward.
- Grievance is a complaint that has been formally presented to a management representative or to a union official.
- According to Michael Jucious, 'grievance is any discontent or dissatisfaction
 whether expressed or not, whether valid or not, arising out of anything
 connected with the company which an employee thinks, believes or even feels
 to be unfair, unjust or inequitable'.
- In short, grievance is a state of dissatisfaction, expressed or unexpressed, written or unwritten, justified or unjustified, having connection with employment situation.

Features of Grievance:

- 1. A grievance refers to any form of discontent or dissatisfaction with any aspect of the organization.
- 2. The dissatisfaction must arise out of employment and not due to personal or family problems.
- 3. The discontent can arise out of real or imaginary reasons. When employees feel that injustice has been done to them, they have a grievance. The reason for such a feeling may be valid or invalid, legitimate or irrational, justifiable or ridiculous.

- 4. The discontent may be voiced or unvoiced, but it must find expression in some form. However, discontent per se is not a grievance. Initially, the employee may complain orally or in writing. If this is not looked into promptly, the employee feels a sense of lack of justice. Now, the discontent grows and takes the shape of a grievance.
- 5. Broadly speaking, thus, a grievance is traceable to be perceived as non-fulfillment of one's expectations from the organization.

Causes of Grievances:

Grievances may occur due to a number of reasons:

1. Economic:

Employees may demand for individual wage adjustments. They may feel that they are paid less when compared to others. For example, late bonus, payments, adjustments to overtime pay, perceived inequalities in treatment, claims for equal pay, and appeals against performance- related pay awards.

2. Work environment:

It may be undesirable or unsatisfactory conditions of work. For example, light, space, heat, or poor physical conditions of workplace, defective tools and equipment, poor quality of material, unfair rules, and lack of recognition.

3. Supervision:

It may be objections to the general methods of supervision related to the attitudes of the supervisor towards the employee such as perceived notions of bias, favouritism, nepotism, caste affiliations and regional feelings.

4. Organizational change:

Any change in the organizational policies can result in grievances. For example, the implementation of revised company policies or new working practices.

5. Employee relations:

Employees are unable to adjust with their colleagues, suffer from feelings of neglect and victimization and become an object of ridicule and humiliation, or other interemployee disputes.

6. Miscellaneous:

These may be issues relating to certain violations in respect of promotions, safety methods, transfer, disciplinary rules, fines, granting leaves, medical facilities, etc.

Effects of Grievance:

Grievances, if not identified and redressed, may adversely affect workers, managers, and the organization.

The effects are the following:

1. On the production:

- a. Low quality of production
- b. Low productivity
- c. Increase in the wastage of material, spoilage/leakage of machinery
- d. Increase in the cost of production per unit

2. On the employees:

- a. Increase in the rate of absenteeism and turnover
- b. Reduction in the level of commitment, sincerity and punctuality
- c. Increase in the incidence of accidents
- d. Reduction in the level of employee morale.

3. On the managers:

a. Strained superior-subordinate relations.

- b. Increase in the degree of supervision and control.
- c. Increase in indiscipline cases
- d. Increase in unrest and thereby machinery to maintain industrial peace

Need for a Formal Procedure to Handle Grievances:

A grievance handling system serves as an outlet for employee frustrations, discontents, and gripes like a pressure release value on a steam boiler. Employees do not have to keep their frustrations bottled up until eventually discontent causes explosion.

The existence of an effective grievance procedure reduces the need of arbitrary action by supervisors because supervisors know that the employees are able to protect such behavior and make protests to be heard by higher management. The very fact that employees have a right to be heard and are actually heard helps to improve morale. In view of all these, every organization should have a clear-cut procedure for grievance handling.

<u>Performance Appraisal</u>: Performance appraisal is the process of measuring and evaluating the performance or accomplishments, including behaviour, of an employee on the job front for a given period. The purpose is to assess the worth and value of a person to the organization. It is also meant for assessing his/her potential for future development in an objective manner.

Why appraise the performance:

- 1. To assess the employee's present level of performance
- 2. To identify the strengths or weaknesses of individual employee
- 3. To provide feedback to the employee so that he can improve his/her performance
- 4. To provide an objective basis for rewarding the employees for their performance
- 5. To motivate those employees who perform

- 6. To check and punish those employees who fail to perform
- 7. To identify the gaps in performance, and thus, assess training and development needs
- 8. To identify the employee's potential to perform
- 9. To provide a database for evolving succession strategies
- 10. To provide a basis for many other decisions such as fixation of incentives or increment, regularization or confirmation of the services of the employee, promotion, transfer or demotion.

Steps in performance Appraisal:

- 1. Create set up performance standards
- 2. Mutually set identifiable and measurable
- 3. Measure present level of performance
- 4. Compare and appraise present level of performance with standard
- 5. Discuss the appraisal with employee
- 6. Identify and initiate the corrective action

<u>Job Evaluation</u>: An attempt to determine and compare the demands which the normal performance of particular job makes on normal workers without taking account of the individual abilities or performance of workers concerned. It rates the job not the rank.

Objectives:

- 1. To establish correct wage correct wage differentials for all jobs with in the factory
- 2. To bring new jobs into their proper relatively with jobs previously established
- 3. To help clarify lines of authority, responsibility and promotion
- 4. To accomplish the foregoing by means of the facts and principles, which can be readily explained to and accepted by all concerned
- 5. To establish a general wage level for a given factory which will have parity with those of neighboring factories

Advantages:

- 1. It is simple, inexpensive and expeditions
- 2. It is easily understood and easily administered
- 3. It helps setting better rates than the arbitrary rates based purely an judgment and experience
- 4. Same unions prefer it, because it leases more room for bargaining.

Disadvantages:

- 1. Job may be ranked on the basis of incomplete inform action and without the benefits of well defined standards
- 2. The rank position of different jobs is likely to be influenced by the prevailing wage ranks
- 3. No one committee number is likely to be familiar with all the jobs

Method of Job Evaluation: It is broadly be classified as

- 1) Qualitative Method
- 2) Quantitative Method
- 1) Qualitative Method: It can broadly be classified as ranking or classifying the job from lowest to highest.
- A)Ranking technique: In this method, the jobs in the organization are arranged in either in the ascending or descending order and numbered serially. The basis of such arrangement could be the job description in terms of duties, responsibilities, qualifications needed, relative difficulty involved in don the job, or value to the company.

Points considered:

Amount of work involved

- 2. Supervision needed
- 3. Extent of responsibility required
- 4. Difficulties involved in the work
- 5. Work conditions required
- b) <u>Classification Method</u>: This is also called job-grading method. Here, the number of grades and the salary particulars for each grade are worked out first. The grades are

clearly described in terms of knowledge, skill and so on. <u>Major steps for job</u> evaluation:

- 1. Deciding the number of grades
- 2. Writing grade descriptions
- 3. Identifying/listing of the jobs to be evaluated
- 4. Preparing job descriptions
- 2) Quantitative Method: Where point values are assigned to the various demands of a job and relative value is obtained by summing all such point values.
- <u>a) Factor comparison method</u>: Every job requires certain capabilities on the part of the person who does the job. These capabilities are considered as critical factors, which can be grouped as follows:

Mean effort Skill

Physical

Responsibility

Working conditions

Step involved in the factor comparison method:

Identify the key jobs

Rank the key job, factor by factor

Apportion the salary among each factor and rank the key jobs Compare factor ranking of each job with its monetary ranking Develop a monetary comparison scale

Evaluate non-key jobs based on the monetary comparison scale

b) <u>Point-rating method</u>: There are four widely accepted factors used in the point-rating method, skill, effort, responsibility and job conditions each of these factors is divided into sub-factors

1. Education and

Skills - training

2. Experience Judgment and

3. initiative

Efforts - 1. Physical

Responsibility towards

- 2. Mental
- 1. Materials or
- product

Equipment or

- 2. process
- 3. Safety of others
- 4. Work of others

Merit Rating: Merit rating is the process of evaluating the relative merit of the person on a given job. It is an essential task of the personnel manager to distinguish the meritorious employees from the other. The data collected from this task is used for strategic decisions such as releasing an increment in pay, promotion, transfer, and transfer on promotion to a critical assignment or even discharge.

Objectives of Merit Rating:

- To determine salary increments
- To decide who has to be transferred, promoted, or demoted
- To discover the workers needs for retaining and advanced training
- To unfold the exceptional skills among the employees based on their innate potentials
- To guide and monitor the performance of those who are lagging behind.

Method of Merit Rating:

Ranking method: In this method, all the staff of a particular cadre or a department are arranged either in the ascending or the descending order in order of merit or value to the firm. Though this is a simple method, it cannot be followed where the employees in the department are many in number.

<u>Paired comparison method</u>: Here, every employee is compared with all others in a particular cadre in the department. By comparing each pair of employees, the rater can decide which of the employees is more valuable to the organization.

Rating scale: Here, the factors dealing with the quantity and quality of work are listed and rated. A numeric value may be assigned to each factor and the factors could be weighed in the order of their relative importance. All the variables are measured against a three or five point scale.

<u>Forced distribution method</u>: Here, employees are given a set of alternatives and they have to choose one, which reflects their understanding of the true nature of the job.

Their thinking is conditioned by the given set of answers.

<u>Narrative or essay method</u>: Here, the candidate is required to narrate in an essay format his/her strengths, weaknesses, and potential to perform. Here, the candidate is not restricted by any given set of alternatives. The candidate is free to decide what to furnish or what not to furnish.

<u>Management by objectives (MPO)</u>: The short-term objectives standards. This method considers the actual performance as the basis mutually agreed upon by the management and the employees are used as performance for evaluation. It is a systematic method of goal setting. In addition, it provides for reviewing performance based on results rather than personality traits or characteristics. However, this is not practical at all levels and for all kinds of work in the organizations.

Capability Maturity Model levels

Capability Maturity Model is a bench-mark for measuring the maturity of an organization's software process. It is a methodology used to develop and refine an organization's **software development** process. CMM can be used to assess an organization against a scale of five process maturity levels based on certain Key Process Areas (KPA). It describes the maturity of the company based upon the project the company is dealing with and the clients. Each level ranks the organization according to its standardization of processes in the subject area being assessed.

A maturity model provides:

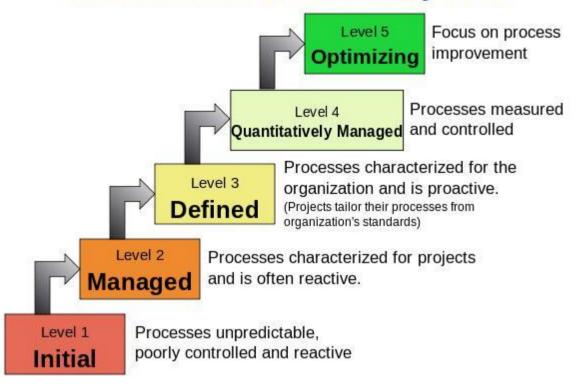

- A place to start
- The benefit of a community's prior experiences
- A common language and a shared vision
- A framework for prioritizing actions
- A way to define what improvement means for your organization

In CMMI models with a staged representation, there are five maturity levels designated by the numbers 1 through 5 as shown below:

- 1. Initial
- 2. Managed

- 3. Defined
- 4. Quantitatively Managed
- 5. Optimizing

Characteristics of the Maturity levels

Maturity levels consist of a predefined set of process areas. The maturity levels are measured by the achievement of the **specific** and **generic goals**that apply to each predefined set of process areas. The following sections describe the characteristics of each maturity level in detail.

What happens at different levels of CMM?

Levels	Activities	Benefits
Level 1 Initial	 At level 1, process is usually chaotic and ad hoc 	None. Project is Total Chaos

- Capability is characterized on the basis of the individuals and not of the organization
- · Progress not measured
- Products developed are often schedule and over budget
- Wide variations in schedule, cost, functionality and quality targets

Level 2 Managed

- Requirement Management
- Estimate project parameters like cost, schedule, and functionality
- Measure actual progress
- Develop plans and process
- Software project standards are defined
- Identify and control products, problem reports changes, etc.
- Processes may differ between projects

- Processes become easier to comprehend
- Managers and team members spend less time in explaining how things are done and more time in executing it
- Projects are better estimated, better planned and more flexible
- Quality is integrated into projects
- Costing might be high initially but goes down overtime
- Ask more paperwork and documentation

Level-3 Defined

- Clarify customer requirements
- Solve design requirements, develop implementation process
- Makes sure that product meets the requirements and intended use
- Analyze decisions systematically
- Rectify and control potential problems

- Process Improvement becomes the standard
- Solution progresses from being "coded" to being "engineered"
- Quality gates appear throughout the project effort with the entire team involved in the process
- Risks are mitigated and don't take the team by surprise

Level-4 Quantitatively Managed

- Manages the project's processes and subprocesses statistically
- Understand process performance, quantitatively manage the organization's project
- Optimizes Process
 Performance across the organization
- Fosters Quantitative Project Management in organization.

Level-5 Optimizing

- Detect and remove the cause of defects early
- Identify and deploy new tools and process improvements to meet needs and business objectives
- Fosters Organizational Innovation and Deployment
- Gives impetus to Causal Analysis and Resolution

How long does it Take to Implement CMM?

CMM is the most desirable process to maintain the quality of the product for any software development company, but its implementation takes little longer than what is expected.

- CMM implementation does not occur overnight
- It's just not merely a "paperwork."
- Typical times for implementation is
 - 3-6 months ->for preparation
 - 6-12 months -> for implementation
 - 3 months -> for assessment preparation
 - 12 months ->for each new level

Internal Structure of CMM

Each level in CMM is defined into **key process area or KPA**, except for level-1. Each KPA defines a cluster of related activities, which when performed collectively achieves a set of goals considered vital for improving software capability

For different CMM levels there are set of KPA's, for instance for CMM model-2, KPA are

- REQM- Requirement Management
- PP- Project Planning
- PMC- Project Monitoring and Control

- SAM- Supplier Agreement Management
- PPQA-Process and Quality Assurance
- CM-Configuration Management

Likewise for other CMM models, you have specific KPA's. To know whether implementation of a KPA is effective, lasting and repeatable, it is mapped on following basis

- 1. Commitment to perform
- 2. Ability to perform
- 3. Activities perform
- 4. Measurement and Analysis
- 5. Verifying implementation

Limitations of CMM Models

- CMM determines what a process should address instead of how it should be implemented
- It does not explain every possibility of software process improvement
- It concentrates on software issues but does not consider strategic business planning, adopting technologies, establishing product line and managing human resources
- It does not tell on what kind of business an organization should be in
- CMM will not be useful in the project having crisis right now

Why Use CMM?

Today CMM act as a "seal of approval" in the software industry. It helps in various ways to improve the software quality.

- It guides towards repeatable standard process and hence reduce the learning time on how to get things done
- Practicing CMM means practicing standard protocol for development, which
 means it not only helps team to save time but also gives clear view to what to
 do and what to expect
- The quality activities gel well with the project rather than thought of as a separate event
- It acts as a commuter between the project and the team
- CMM efforts are always towards the improvement of the process

Summary: CMM was first introduced in late 80's in U.S Air Force to evaluate the work of subcontractors. Later on with improved version it was implemented to track the quality of the software development system.

The entire CMM level is divided into five levels.

- **Level 1** (Initial): Where requirements for the system are usually uncertain, misunderstood and uncontrolled. The process is usually chaotic and ad-hoc.
- **Level 2** (Managed): Estimate project cost, schedule, and functionality. Software standards are defined
- Level 3 (Defined): Makes sure that product meets the requirements and intended use
- Level 4 (Quantitatively Managed): Manages the project's processes and subprocesses statistically
- **Level 5** (Maturity): Identify and deploy new tools and process improvements to meet needs and business objectives

Performance Management system

Definition of Performance Management

The role of HR in the present scenario has undergone a sea change and its focus is on evolving such functional strategies which enable successful implementation of the major corporate strategies. In a way, HR and corporate strategies function in alignment. Today, HR works towards facilitating and improving the performance of the employees by building a conducive work environment and providing maximum opportunities to the employees for participating in organizational planning and decision making process.

Today, all the major activities of HR are driven towards development of high performance leaders and fostering employee motivation. So, it can be interpreted that the role of HR has evolved from merely an appraiser to a facilitator and an enabler.

Performance management is the current buzzword and is the need in the current cut throat competition and the organizational battle leadership. Performance management is a much broader and a complicated function of HR, as it encompasses activities such as joint goal setting, continuous progress review and frequent communication, feedback and implementation of coaching for improved performance, development programmes and rewarding achievements.

The process of performance management starts with the joining of a new incumbent in a system and ends when an employee quits the organization.

Performance management can be regarded as a systematic process by which the overall performance of an organization can be improved by improving the performance of individuals within a team framework. It is a means for promoting superior performance by communicating expectations, defining roles within a required competence framework and establishing achievable benchmarks.

According to Armstrong and Baron (1998), Performance Management is both a strategic and an integrated approach to delivering successful results in organizations by improving the performance and developing the capabilities of teams and individuals. The term performance management gained its popularity in early 1980's when total quality management programs received utmost importance for achievement of superior standards and quality performance. Tools such as job design, leadership development, training and reward system received an equal impetus along with the traditional performance appraisal process in the new comprehensive and a much wider framework. Performance management is an ongoing communication process which is carried between the supervisors and the employees through out the year. The process is very much cyclical and continuous in nature. A performance management system includes the following action.

- Developing clear job descriptions and employee performance plans which includes the key result areas (KRA') and performance indicators.
- Selection of right set of people by implementing an appropriate selection process.
- Negotiating requirements and performance standards for measuring the outcome and overall productivity against the predefined benchmarks.
- Providing continuous coaching and feedback during the period of delivery of performance.
- Identifying the training and development needs by measuring the outcomes achieved against the set standards and implementing effective development programs for improvement.
- Holding quarterly performance development discussions and evaluating employee performance on the basis of performance plans.
- Designing effective compensation and reward systems for recognizing those employees who excel in their jobs by achieving the set standards in accordance with the performance plans or rather exceed the performance benchmarks.
- Providing promotional/career development support and guidance to the employees.
- Performing exit interviews for understanding the cause of employee discontentment and thereafter exit from an organization.

A **performance management process** sets the platform for rewarding excellence by aligning individual employee accomplishments with the organization's mission and objectives and making the employee and the organization understand the importance of a specific job in realizing outcomes. By establishing clear performance expectations which includes results, actions and behaviors, it helps the employees in understanding what exactly is expected out of their jobs and setting of standards help in eliminating those jobs which are of no use any longer. Through regular feedback and coaching, it provides an advantage of diagnosing the problems at an early stage and taking corrective actions.

To conclude, performance management can be regarded as a proactive system of managing employee performance for driving the individuals and the organizations towards desired performance and results. It's about striking a harmonious alignment between individual and organizational objectives for accomplishment of excellence in performance

Components of Performance Management System

Any effective performance management system includes the following components:

1. **Performance Planning:** Performance planning is the first crucial component of any performance management process which forms the basis of performance appraisals. Performance planning is jointly done by the appraisee and also the reviewee in the beginning of a performance session. During this period, the employees decide upon the targets and the key performance areas which can be performed over a year within the performance budget., which is finalized after a mutual agreement between the reporting officer and the employee.

- 2. Performance Appraisal and Reviewing: The appraisals are normally performed twice in a year in an organization in the form of mid reviews and annual reviews which is held in the end of the financial year. In this process, the appraisee first offers the self filled up ratings in the self appraisal form and also describes his/her achievements over a period of time in quantifiable terms. After the self appraisal, the final ratings are provided by the appraiser for the quantifiable and measurable achievements of the employee being appraised. The entire process of review seeks an active participation of both the employee and the appraiser for analyzing the causes of loopholes in the performance and how it can be overcome. This has been discussed in the performance feedback section.
- 3. Feedback on the Performance followed by personal counseling and performance facilitation: Feedback and counseling is given a lot of importance in the performance management process. This is the stage in which the employee acquires awareness from the appraiser about the areas of improvements and also information on whether the employee is contributing the expected levels of performance or not. The employee receives an open and a very transparent feedback and along with this the training and development needs of the employee is also identified. The appraiser adopts all the possible steps to ensure that the employee meets the expected outcomes for an organization through effective personal counseling and guidance, mentoring and representing the employee in training programmes which develop the competencies and improve the overall productivity.
- 4. **Rewarding good performance:** This is a very vital component as it will determine the work motivation of an employee. During this stage, an employee is publicly recognized for good performance and is rewarded. This stage is very sensitive for an employee as this may have a direct influence on the self esteem and achievement orientation. Any contributions duly recognized by an organization helps an employee in coping up with the failures successfully and satisfies the need for affection.
- 5. **Performance Improvement Plans:** In this stage, fresh set of goals are established for an employee and new deadline is provided for accomplishing those objectives. The employee is clearly communicated about the areas in which the employee is expected to improve and a stipulated deadline is also assigned within which the employee must show this improvement. This plan is jointly developed by the appraisee and the appraiser and is mutually approved.
- 6. **Potential Appraisal:** Potential appraisal forms a basis for both lateral and vertical movement of employees. By implementing competency mapping and various assessment techniques, potential appraisal is performed. Potential appraisal provides crucial inputs for succession planning and job rotation.

Objectives of Performance Management

According to Lockett (1992), performance management aims at developing individuals with the required commitment and competencies for working towards the shared meaningful objectives within an organizational framework.

Performance management frameworks are designed with the objective of improving both individual and organizational performance by identifying performance requirements, providing regular feedback and assisting the employees in their career development.

Performance management aims at building a high performance culture for both the individuals and the teams so that they jointly take the responsibility of improving the business processes on a continuous basis and at the same time raise the competence bar by upgrading their own skills within a leadership framework. Its focus is on enabling goal clarity for making people do the right things in the right time. It may be said that the main objective of a performance management system is to achieve the capacity of the employees to the full potential in favor of both the employee and the organization, by defining the expectations in terms of roles, responsibilities and accountabilities, required competencies and the expected behaviors.

The main goal of performance management is to ensure that the organization as a system and its subsystems work together in an integrated fashion for accomplishing optimum results or outcomes.

The major **objectives of performance management** are discussed below:

- To enable the employees towards achievement of superior standards of work performance.
- To help the employees in identifying the knowledge and skills required for performing the job efficiently as this would drive their focus towards performing the right task in the right way.
- Boosting the performance of the employees by encouraging employee empowerment, motivation and implementation of an effective reward mechanism.
- Promoting a two way system of communication between the supervisors and the employees for clarifying expectations about the roles and accountabilities, communicating the functional and organizational goals, providing a regular and a transparent feedback for improving employee performance and continuous coaching.
- Identifying the barriers to effective performance and resolving those barriers through constant monitoring, coaching and development interventions.
- Creating a basis for several administrative decisions strategic planning, succession planning, promotions and performance based payment.
- Promoting personal growth and advancement in the career of the employees by helping them in acquiring the desired knowledge and skills.

Some of the key concerns of a performance management system in an organization are:

- Concerned with the output (the results achieved), outcomes, processes required for reaching the results and also the inputs (knowledge, skills and attitudes).
- Concerned with measurement of results and review of progress in the achievement of set targets.

- Concerned with defining business plans in advance for shaping a successful future.
- Striving for continuous improvement and continuous development by creating a learning culture and an open system.
- Concerned with establishing a culture of trust and mutual understanding that fosters free flow of communication at all levels in matters such as clarification of expectations and sharing of information on the core values of an organization which binds the team together.
- Concerned with the provision of procedural fairness and transparency in the process of decision making.

The performance management approach has become an indispensable tool in the hands of the corporates as it ensures that the people uphold the corporate values and tread in the path of accomplishment of the ultimate corporate vision and mission. It is a forward looking process as it involves both the supervisor and also the employee in a process of joint planning and goal setting in the beginning of the year.

UNIT: 4 PROJECT MANAGEMENT

Introduction to CPM / PERT Techniques

CPM/PERT or Network Analysis as the technique is sometimes called, developed along two parallel streams, one industrial and the other military.

CPM (Critical Path Method) was the discovery of M.R.Walker of E.I.Du Pont de Nemours & Co. and J.E.Kelly of Remington Rand, circa 1957. The computation was designed for the UNIVAC-I computer. The first test was made in 1958, when CPM was applied to the construction of a new chemical plant. In March 1959, the method was applied to maintenance shut-down at the Du Pont works in Louisville, Kentucky. Unproductive time was reduced from 125 to 93 hours.

PERT (Project Evaluation and Review Technique) was devised in 1958 for the POLARIS missile program by the Program Evaluation Branch of the Special Projects office of the U.S.Navy, helped by the Lockheed Missile Systems division and the Consultant firm of Booz-Allen & Hamilton. The calculations were so arranged so that they could be carried out on the IBM Naval Ordinance Research Computer (NORC) at Dahlgren, Virginia.

The methods are essentially **network-oriented techniques** using the same principle. PERT and CPM are basically time-oriented methods in the sense that they both lead to determination of a time schedule for the project. The significant difference between two approaches is that the time estimates for the different activities in CPM were assumed to be **deterministic** while in PERT these are described **probabilistically**. These techniques are referred as **project scheduling** techniques.

In **CPM** activities are shown as a network of precedence relationships using activity-on-node network construction

- Single estimate of activity time
- Deterministic activity times

USED IN: Production management - for the jobs of repetitive in nature where the activity time estimates can be predicted with considerable certainty due to the existence of past experience.

In **PERT** activities are shown as a network of precedence relationships using activity-on-arrow network construction

- Multiple time estimates
- Probabilistic activity times

USED IN: Project management - for non-repetitive jobs (research and development work), where the time and cost estimates tend to be quite uncertain. This technique uses probabilistic time estimates.

Benefits of PERT/CPM

- Useful at many stages of project management
- Mathematically simple
- Give critical path and slack time
- Provide project documentation
- Useful in monitoring costs

Limitations of PERT/CPM

Clearly defined, independent and stable activities
Specified precedence relationships
Over emphasis on critical paths

2.2 Applications of CPM / PERT

These method	ds have been applied to a wide variety of problems in industries
and have four	nd acceptance even in government organizations. These include
	Construction of a dam or a canal system in a region
	Construction of a building or highway
	Maintenance or overhaul of airplanes or oil refinery
	Space flight
	Cost control of a project using PERT / COST
	Designing a prototype of a machine
	Development of supersonic planes
2.3 <u>Basic 9</u>	Steps in PERT / CPM
Project sched	uling by PERT / CPM consists of four main steps
1.	Planning
	The planning phase is started by splitting the total project in to
	s. These smaller projects in turn are divided into activities and are he department or section.
	The relationship of each activity with respect to other activities
_	and established and the corresponding responsibilities and the
□ completion of	Thus the possibility of overlooking any task necessary for the the project is reduced substantially.
2.	Scheduling
	The ultimate objective of the scheduling phase is to prepare a
time chart sh	nowing the start and finish times for each activity as well as its
relationship to	o other activities of the project.
	Moreover the schedule must pinpoint the critical path activities
which require	special attention if the project is to be completed in time.
	For non-critical activities, the schedule must show the amount of
slack or float	times which can be used advantageously when such activities are
delayed or wh	nen limited resources are to be utilized effectively.

3. Allocation of resources П Allocation of resources is performed to achieve the desired objective. A resource is a physical variable such as labour, finance, equipment and space which will impose a limitation on time for the project. П When resources are limited and conflicting, demands are made for the same type of resources a systematic method for allocation of resources become essential. П Resource allocation usually incurs a compromise and the choice of this compromise depends on the judgment of managers. 4. **Controlling** ☐ The final phase in project management is controlling. Critical path methods facilitate the application of the principle of management by expectation to identify areas that are critical to the completion of the project. ☐ By having progress reports from time to time and updating the network continuously, a better financial as well as technical control over the project is exercised. ☐ Arrow diagrams and time charts are used for making periodic progress reports. If required, a new course of action is determined for the remaining portion of the project.

2.4 The Framework for PERT and CPM

Essentially, there are six steps which are common to both the techniques. The procedure is listed below:

- I. Define the Project and all of its significant activities or tasks. The Project (made
 - up of several tasks) should have only a single start activity and a single finish activity.
- II. Develop the relationships among the activities. Decide which activities must precede and which must follow others.

- III. Draw the "Network" connecting all the activities. Each Activity should have unique event numbers. Dummy arrows are used where required to avoid giving the same numbering to two activities.
- IV. Assign time and/or cost estimates to each activity
- V. Compute the longest time path through the network. This is called the critical path.
- VI. Use the Network to help plan, schedule, and monitor and control the project.

The Key Concept used by CPM/PERT is that a small set of activities, which make up the longest path through the activity network control the entire project. If these "critical" activities could be identified and assigned to responsible persons, management resources could be optimally used by concentrating on the few activities which determine the fate of the entire project.

Non-critical activities can be replanned, rescheduled and resources for them can be reallocated flexibly, without affecting the whole project.

Five useful questions to ask when preparing an activity network are:

Is this a Start Activity?
Is this a Finish Activity?
What Activity Precedes this?
What Activity Follows this?
What Activity is Concurrent with this?

2.5 Network Diagram Representation

In a network representation of a project certain definitions are used

1. Activity

Any individual operation which utilizes resources and has an end and a beginning is called activity. An arrow is commonly used to represent an activity with its head indicating the direction of progress in the project. These are classified into four categories

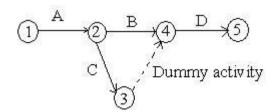

- Predecessor activity Activities that must be completed immediately prior to the start of another activity are called predecessor activities.
- Successor activity Activities that cannot be started until one or more of other activities are completed but immediately succeed them are called successor activities.
- 3. **Concurrent activity** Activities which can be accomplished concurrently are known as concurrent activities. It may be noted that an activity can be a predecessor or a successor to an event or it may be concurrent with one or more of other activities.
- 4. **Dummy activity** An activity which does not consume any kind of resource but merely depicts the technological dependence is called a dummy activity.

The dummy activity is inserted in the network to clarify the activity pattern in the following two situations

- $\hfill\Box$ To make activities with common starting and finishing points distinguishable
- ☐ To identify and maintain the proper precedence relationship between activities

that is not connected by events.

For example, consider a situation where A and B are concurrent activities. C is dependent on A and D is dependent on A and B both. Such a situation can be handled by using a dummy activity as shown in the figure.

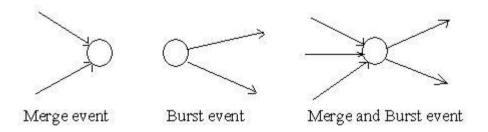

2. Event

An event represents a point in time signifying the completion of some activities and the beginning of new ones. This is usually represented by a circle in a network which is also called a node or connector.

The events are classified in to three categories

- 1. **Merge event** When more than one activity comes and joins an event such an event is known as merge event.
- 2. **Burst event** When more than one activity leaves an event such an event is known as burst event.
- 3. **Merge and Burst event** An activity may be merge and burst event at the same time as with respect to some activities it can be a merge event and with respect to some other activities it may be a burst event.

3. Sequencing

The first prerequisite in the development of network is to maintain the precedence relationships. In order to make a network, the following points should be taken into considerations

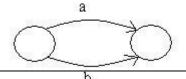

□ What job or jobs precede it?
 □ What job or jobs could run concurrently?
 □ What job or jobs follow it?
 □ What controls the start and finish of a job?

Since all further calculations are based on the network, it is necessary that a network be drawn with full care.

2.6 Rules for Drawing Network Diagram

Rule 1

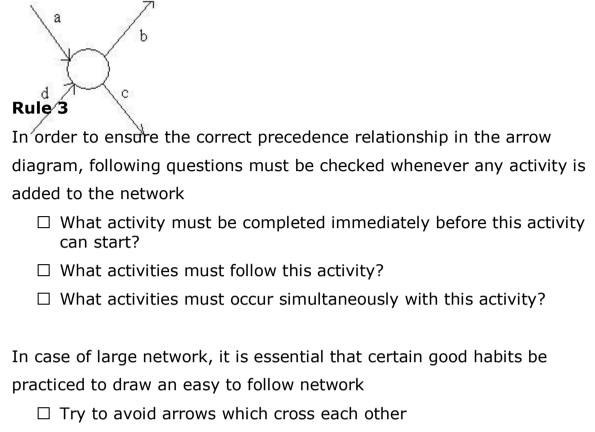

Each activity is represented by one and only one arrow in the network

114

Rule 2

No two activities can be identified by the same end events

☐ Use straight arrows

 $\hfill\square$ Do not attempt to represent duration of activity by its arrow length

☐ Use arrows from left to right. Avoid mixing two directions, vertical and standing arrows may be used if necessary.

☐ Use dummies freely in rough draft but final network should not have any redundant dummies.

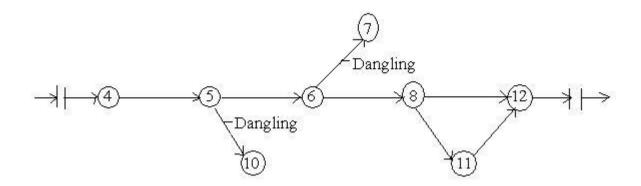

☐ The network has only one entry point called start event and one point of emergence called the end event.

1.7 <u>Common Errors in Drawing Networks</u>

The three types of errors are most commonly observed in drawing network diagrams

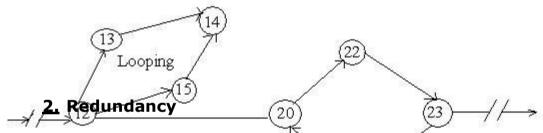

1. Dangling

To disconnect an activity before the completion of all activities in a network diagram is known as dangling. As shown in the figure activities (5-10) and (6-7) are not the last activities in the network. So the diagram is wrong and indicates the error of dangling

2. Looping or Cycling

Looping error is also known as cycling error in a network diagram. Drawing an endless loop in a network is known as error of looping as shown in the following figure.

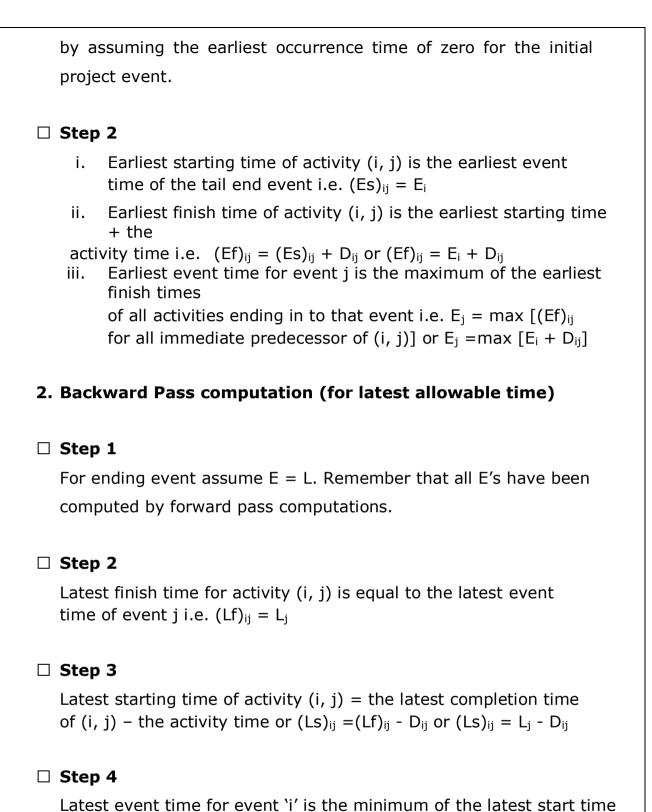

Unnecessarily inserting the dummy activity in network logic is known as the error of redundancy as shown in the following diagram

2.8 Advantages and Disadvantages

PERT/CPM has the following advantages

- ☐ A PERT/CPM chart explicitly defines and makes visible dependencies (precedence relationships) between the elements,
- ☐ PERT/CPM facilitates identification of the critical path and makes this visible,

	☐ PERT/CPM facilitates identification of early start, late start, and slack for each activity,
	□ PERT/CPM provides for potentially reduced project duration due to better understanding of dependencies leading to improved overlapping of activities and tasks where feasible.
P	ERT/CPM has the following disadvantages:
	□ There can be potentially hundreds or thousands of activities and individual dependency relationships,
	☐ The network charts tend to be large and unwieldy requiring several pages to print and requiring special size paper,
	 The lack of a timeframe on most PERT/CPM charts makes it harder to show status although colours can help (e.g., specific colour for completed nodes),
2	 When the PERT/CPM charts become unwieldy, they are no longer used to manage the project. Critical Path in Network Analysis
В	asic Scheduling Computations
Т	he notations used are
	, j) = Activity with tail event i and head event j
	= Earliest occurrence time of event i
•	i = Latest allowable occurrence time of event j ij = Estimated completion time of activity (i, j)
	Es) _{ij} = Earliest starting time of activity (i, j)
	$\Xi f)_{ij} = Earliest finishing time of activity (i, j)$
	_s) _{ij} = Latest starting time of activity (i, j)
(1	$_{\rm L}f)_{ij}$ = Latest finishing time of activity (i, j)
Т	he procedure is as follows
	1. Determination of Earliest time (E_j): Forward Pass computation
	□ Step 1
	•
	The computation begins from the start node and move towards

activities originating from that event i.e. $L_i = min [(Ls)_{ij} for all immediate successor of (i, j)] = min [(Lf)_{ij} - D_{ij}] = min [L_j - D_{ij}]$

of all

3. Determination of floats and

slack times There are three

kinds of floats

☐ **Total float** – The amount of time by which the completion of an activity could be delayed beyond the earliest expected completion time without affecting the overall project duration time.

Mathematically

$$(Tf)_{ij} = (Latest start - Earliest start)$$
 for activity $(i - j)$
 $(Tf)_{ij} = (Ls)_{ij} - (Es)_{ij}$ or $(Tf)_{ij} = (L_i - D_{ij}) - E_i$

□ **Free float** – The time by which the completion of an activity can be delayed beyond the earliest finish time without affecting the earliest start of a subsequent activity.

Mathematically

 $(Ff)_{ij} = (Earliest\ time\ for\ event\ j\ -\ Earliest\ time\ for\ event\ i)\ -\ Activity\ time\ for\ (\ i,$

j)
$$(Ff)_{ij} = (E_j - E_i) - D_{ij}$$

☐ **Independent float** – The amount of time by which the start of an activity can be delayed without effecting the earliest start time of any immediately following activities, assuming that the preceding activity has finished at its latest finish time.

Mathematically

$$(If)_{ij} = (E_j - L_i) - D_{ij}$$

The negative independent float is always taken as zero.

□ **Event slack** - It is defined as the difference between the latest event and earliest event times.

Mathematically

Head event slack = L_j - E_j , Tail event slack = L_i - E_i

4. Determination of critical path

Critical event – The events with zero slack times are called critical events. In other words the event i is said to be critical if $E_i = L_i$
Critical activity – The activities with zero total float are known as critical activities. In other words an activity is said to be critical if a delay in its start will cause a further delay in the completion date of the entire project.
Critical path – The sequence of critical activities in a network is called critical path. The critical path is the longest path in the network from the starting event to ending event and defines the minimum time required to complete the project.

Exercise

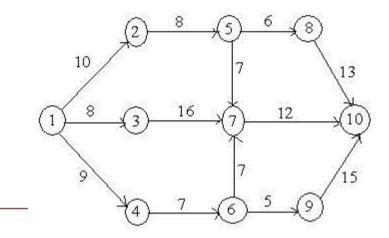

- 1. What is PERT and CPM?
- 2. What are the advantages of using PERT/CPM?
- 3. Mention the applications of PERT/CPM
- 4. Explain the following terms
 - a. Earliest time
 - b. Latest time
 - c. Total activity slack
 - d. Event slack
 - e. Critical path
- 5. Explain the CPM in network analysis.
- 6. What are the rules for drawing network diagram? Also mention the common errors that occur in drawing networks.
- 7. What is the difference between PERT and CPM/
- 8. What are the uses of PERT and CPM?
- 9. Explain the basic steps in PERT/CPM techniques.

10. Write the framework of PERT/CPM.

Worked Examples on CPM

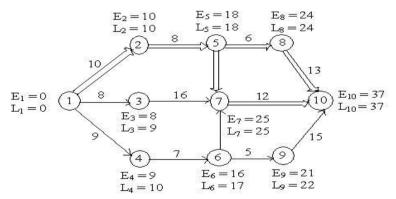

Example 1

Determine the early start and late start in respect of all node points and identify critical path for the following network.

Solution

Calculation of E and L for each node is shown in the network

S

	Normal	Earliest Time		Latest Time		
Activity(i,						Float Time
	Time	Start	Finish	Start	Finish	
j)	(D _{ij})	(E _i)	(E _i + D _{ij})	(L _i - D _{ij})	(L _i)	(L _i - D _{ij}) - E _i
(1, 2)	10	0	10	0	10	0
(1, 3)	8	0	8	1	9	1
(1, 4)	9	0	9	1	10	1
(2, 5)	8	10	18	10	18	0
(4, 6)	7	9	16	10	17	1

			•		
16	8	24	9	25	1
7	18	25	18	25	0
7	16	23	18	25	2
6	18	24	18	24	0
5	16	21	17	22	1
12	25	37	25	37	0
13	24	37	24	37	0
15	21	36	22	37	1
	7 7 6 5 12 13	7 18 7 16 6 18 5 16 12 25 13 24	7 18 25 7 16 23 6 18 24 5 16 21 12 25 37 13 24 37	7 18 25 18 7 16 23 18 6 18 24 18 5 16 21 17 12 25 37 25 13 24 37 24	7 18 25 18 25 7 16 23 18 25 6 18 24 18 24 5 16 21 17 22 12 25 37 25 37 13 24 37 24 37

Network Analysis Table

From the table, the critical nodes are (1, 2), (2, 5), (5, 7), (5, 8), (7, 10) and (8, 10)

From the table, there are two possible critical paths

i.
$$1 \rightarrow 2 \rightarrow 5 \rightarrow 8 \rightarrow 10$$

ii.
$$1 \rightarrow 2 \rightarrow 5 \rightarrow 7 \rightarrow 10$$

UNIT: 5 INTRODUCTION TO STRATEGIC MANAGEMENT

<u>Corporate Planning</u>: Corporate planning refers to the process of planning undertaken by top management to achieve their organization goals.

Two significant phases incorporate planning:

Environmental Scanning

Strategy formulation and implementation

Mission is the guiding force for all the activities here. The first step in the process of achievement of the mission is to break the mission in to objectives, strategies and programme have to be formulated and implemented to achieve the given objectives which would eventually lead to the fulfillment of mission.

WHAT IS VMOGSA?

VMOGSA (Vision, Mission, Objectives, goals, Strategies, and Action Plans) is a practical planning process used to help community groups define a vision and develop practical ways to enact change. VMOGSA helps your organization set and achieve short term goals while keeping sight of your long term vision. Implementing this planning process into your group's efforts supports developing a clear mission, building consensus, and grounding your group's dreams. This section explores how and when to implement VMOGSA into your organization's planning process.

One way to make that journey is through strategic planning, the process by which a group defines its own "VMOGSA;" that is, its **V**ision, **M**ission, **O**bjectives, goals, **S**trategies, and **A**ction Plans. VMOGSA is a practical planning process that can be used by any community organization or initiative. This comprehensive planning tool can help your organization by providing a blueprint for moving from dreams to actions to positive outcomes for your community.

In this section, we will give a general overview of the process, and touch briefly on each of the individual parts. In Examples, we'll show you how an initiative to prevent adolescent pregnancy used the VMOGSA process effectively. Then, in Tools, we offer you a possible agenda for a planning retreat, should your organization decide to use this process. Finally, the remaining sections in this chapter will walk you through the steps needed to fully develop each portion of the process.

WHY SHOULD YOUR ORGANIZATION USE VMOGSA?

Why should your organization use this planning process? There are many good reasons, including all of the following:

- The VMOGSA process grounds your dreams. It makes good ideas possible by laying out what needs to happen in order to achieve your vision.
- By creating this process in a group effort (taking care to involve both people affected by the problem and those with the abilities to change it), it allows your organization to build consensus around your focus and the necessary steps your organization should take.

- The process gives you an opportunity to develop your vision and mission together with those in the community who will be affected by what you do. That means that your work is much more likely to address the community's real needs and desires, rather than what you think they might be. It also means community ownership of the vision and mission, putting everyone on the same page and greatly increasing the chances that any effort will be successful.
- VMOGSA allows your organization to focus on your short-term goals while keeping sight of your long-term vision and mission.

WHEN SHOULD YOU USE VMOGSA?

So, when should you use this strategic planning process? Of course, it always makes sense for your organization to have the direction and order it gives you, but there are some times it makes particularly good sense to use this process. These times include:

- When you are starting a new organization.
- When your organization is starting a new initiative or large project, or is going to begin work in a new direction.
- When your group is moving into a new phase of an ongoing effort.
- When you are trying to invigorate an older initiative that has lost its focus or momentum.
- When you're applying for new funding or to a new funder. It's important under these circumstances to clarify your vision and mission so that any funding you seek supports what your organization actually stands for. Otherwise, you can wind up with strings attached to the money that require you to take a direction not in keeping with your organization's real purpose or philosophy.

Let's look briefly at each of the individual ingredients important in this process. Then, in the next few sections we'll look at each of these in a more in-depth manner, and explain how to go about developing each step of the planning process.

VISION (THE DREAM)

Your vision communicates what your organization believes are the ideal conditions for your community – how things would look if the issue important to you were perfectly addressed. This utopian dream is generally described by one or more phrases or vision statements, which are brief proclamations that convey the community's dreams for the future. By developing a vision statement, your organization makes the beliefs and governing principles of your organization clear to the greater community (as well as to your own staff, participants, and volunteers).

There are certain characteristics that most vision statements have in common. In general, vision statements should be:

- Understood and shared by members of the community
- Broad enough to encompass a variety of local perspectives
- Inspiring and uplifting to everyone involved in your effort

 Easy to communicate - for example, they should be short enough to fit on a T-shirt

Here are a few vision statements which meet the above criteria:

- Healthy children
- Safe streets, safe neighborhoods
- Every house a home
- Education for all
- Peace on earth

MISSION (THE WHAT AND WHY)

Mission:

<u>Mission or purpose</u>: This is also called overall objective or overall goal. The mission or purpose identifies the basic function or task of an enterprises or agency or of any part of its. Every kind of organized operation has, or at least should have if it is to be meaningful, purpose or mission.

Some writes distinguish between purpose and mission. While a business for example may have a social purpose of producing and distributing goods and services. It can accomplish this by fulfilling a mission of producing certain line of products.

Developing *mission statements* are the next step in the action planning process. An organization's mission statement describes *what* the group is going to do, and *why* it's going to do that. Mission statements are similar to vision statements, but they're more concrete, and they are definitely more "action-oriented" than vision statements. The mission might refer to a problem, such as an inadequate housing, or a goal, such as providing access to health care for everyone. And, while they don't go into a lot of detail, they start to hint - very broadly - at *how* your organization might go about fixing the problems it has noted. Some general guiding principles about mission statements are that they are:

- Concise. Although not as short a phrase as a vision statement, a mission statement should still get its point across in one sentence.
- *Outcome-oriented*. Mission statements explain the overarching outcomes your organization is working to achieve.
- *Inclusive*. While mission statements do make statements about your group's overarching goals, it's very important that they do so very broadly. Good mission statements are not limiting in the strategies or sectors of the community that may become involved in the project.

The following mission statements are examples that meet the above criteria.

- "To promote child health and development through a comprehensive family and community initiative."
- "To create a thriving African American community through development of jobs, education, housing, and cultural pride.

• "To develop a safe and healthy neighborhood through collaborative planning, community action, and policy advocacy."

While vision and mission statements themselves should be short, it often makes sense for an organization to include its deeply held beliefs or philosophy, which may in fact define both its work and the organization itself. One way to do this without sacrificing the directness of the vision and mission statements is to include guiding principles as an addition to the statements. These can lay out the beliefs of the organization while keeping its vision and mission statements short and to the point.

OBJECTIVES (HOW MUCH OF WHAT WILL BE ACCOMPLISHED BY WHEN)

<u>Objectives</u>: Objective are the ends towards which activities is aimed-they are results to be achieved. They represent not only the end point of planning but the end toward which point of planning but the end toward which organizing, staffing, leading and controlling are aimed. While enterprises objectives are basic plan of firm a department may also have its own objectives

Once an organization has developed its mission statement, its next step is to develop the specific objectives that are focused on achieving that mission. Objectives refer to specific measurable results for the initiative's broad goals. An organization's objectives generally lay out how much of what will be accomplished by when. For example, one of several objectives for a community initiative to promote care and caring for older adults might be: "By 2015 (by when), to increase by 20% (how much) those elders reporting that they are in daily contact with someone who cares about them (of what)."

There are three basic types of objectives. They are:

- Behavioral objectives. These objectives look at changing the behaviors of people (what they are doing and saying) and the products (or results) of their behaviors. For example, a neighborhood improvement group might develop an objective around having an increased amount of home repair taking place (the behavior) or of improved housing (the result).
- outcome objectives. These are related to behavioral outcome objectives, but are more focused more on a community level instead of an individual level. For example, the same group might suggest increasing the percentage of decent affordable housing in the community as a community-level outcome objective.
- *Process objectives*. These are the objectives that refer to the implementation of activities necessary to achieve other objectives. For example, the group might adopt a comprehensive plan for improving neighborhood housing.

It's important to understand that these different types of objectives aren't mutually exclusive. Most groups will develop objectives in all three categories. Examples of objectives include:

- By December 2010, to increase by 30% parent engagement (i.e., talking, playing, reading) with children under 2 years of age. (*Behavioral objective*)
- By 2012, to have made a 40% increase in youth graduating from high school. (Community -level outcome objective)
- By the year 2006, increase by 30% the percentage of families that own their home. (*Community-level outcome objective*)

• By December of this year, implement the volunteer training program for all volunteers. (*Process objective*)

<u>Goal</u>: It goals naturally contribute to the attainment of enterprises objectives but the two sets of goals may entirely different.

For example: The objective of a business might be to make a certain profit by producing a given line of home entertainment equipment, while the goal of the manufacture department might be to produce the required number of television sets of given design and quality at a given cost.

STRATEGIES (THE HOW)

Strategies: "Plan of Action"

- 1.General programs of action and development of resources to attain comprehensive objectives.
- 2. The program of objectives of an organization and their changes, resources used to attain these objectives.
- 3. The determination of basic long-term objectives of an enterprise and adoption of courses of action and allocation of resources necessary to achieve the goals. Strategies explain how the initiative will reach its objectives. Generally, organizations will have a wide variety of strategies that include people from all of the different parts, or sectors, of the community. These strategies range from the very broad, which encompass people and resources from many different parts of the community, to the very specific, which aim at carefully defined areas.

Examples of broad strategies include:

- A child health program might use social marketing to promote adult involvement with children
- An adolescent pregnancy initiative might decide to increase access to contraceptives in the community
- An urban revitalization project might enhance the artistic life of the community by encouraging artists to perform in the area

Five types of specific strategies can help guide most interventions. They are:

- Providing information and enhancing skills (e.g., offer skills training in conflict management)
- Enhancing services and support (e.g., start a mentoring programs for highrisk youth)
- Modify access, barriers, and opportunities (such as offering scholarships to students who would be otherwise unable to attend college)
- Change the consequences of efforts (e.g., provide incentives for community members to volunteer)
- Modify policies (e.g., change business policies to allow parents and guardians and volunteers to spend more time with young children)

ACTION PLAN (WHAT CHANGE WILL HAPPEN; WHO WILL DO WHAT BY WHEN TO MAKE IT HAPPEN)

Finally, an organization's action plan describes in great detail exactly how strategies will be implemented to accomplish the objectives developed earlier in this process. The plan refers to: a) specific (community and systems) changes to be sought, and b) the specific action steps necessary to bring about changes in all of the relevant sectors, or parts, of the community.

The key aspects of the intervention or (community and systems) changes to be sought are outlined in the action plan. For example, in a program whose mission is to increase youth interest in politics, one of the strategies might be to teach students about the electoral system. Some of the action steps, then, might be to develop age-appropriate materials for students, to hold mock elections for candidates in local schools, and to include some teaching time in the curriculum.

Action steps are developed for each component of the intervention or (community and systems) changes to be sought. These include:

- Action step(s): What will happen
- Person(s) responsible: Who will do what
- Date to be completed: Timing of each action step
- Resources required: Resources and support (both what is needed and what's available)
- Barriers or resistance, and a plan to overcome them!
- Collaborators: Who else should know about this action

Your action plan will need to be tried and tested and revised, then tried and tested and revised again. You'll need to obtain feedback from community members, and add and subtract elements of your plan based on that feedback.

<u>Policy</u>: Policy a broad guideline set by the top management for the purpose of making decisions at different levels in the organization, once the corporate objectives are established policies can be formulated organization policy reflects the owner's attitude to different segments such a creditors the employees, customers and society at large.

<u>Programmes</u>: Programmes refer to the logical sequence of operations to be performed in a given project based on a set of goals, policies, procedures, rules and task assignments. They are used carry out a given course of action.

<u>Purpose</u>: A strategy is an operational tool to achieve the goals, and thus, the corporate mission. Strategies do no attempt to outline exactly how the enterprise is to accomplish its objective. A company may view downsizing in a competitive market to render cost effective services. Thus, strategy provides a frame work to guide thinking and action.

IN SUMMARY

Everyone has a dream. But the most successful individuals - and community organizations - take that dream and find a way to make it happen. VMOSA helps groups do just that. This strategic planning process helps community groups define their dream, set their goals, define ways to meet those goals, and finally, develop practical ways bring about needed changes.

In this section, you've gained a general understanding of the strategic planning process. If you believe your organization might benefit from using this process, we invite you to move on to the next sections of this chapter, which explain in some depth how to design and develop your own strategic plan.

<u>Strategic Management Process</u>: Strategic management is a process or series of steps. The basic steps of the strategic management process are

<u>Identifying Corporate Mission</u>: Identify what the organization wants to achieve to start with for the purpose of it is necessary that all concerned parties understand the overall purpose of the organization and the methods of attaining them. It is also desirable that they agree on the corporate policies of the organization.

<u>Formulate strategic objectives</u>: By preparing statements of mission, policy, strategy, and goals, the top management established the frame work within which its divisions or departments prepare their plans. It is essential that the members of the organization agree on these given strategic objectives. The strategic objectives thus formulated reinforce the commitment of the members of the organization to achieve the corporate goals.

Appraise internal and external environment: To evolve alternative strategies to achieve these evolve alternative strategies to achieve these goals, a detailed appraisal of both the internal and external environment is carried out. The appraisal of internal environment reveals the strengths and weakness of the firm. The appraisal of external environment reveals the opportunities and threats for the firm. It is popularly called as SWOT analysis capitalizes on internal strengths, make use of best opportunities and beware of the threats in the external environment.

<u>Develop and evaluate alternative strategies</u>: There could be some alternative strategies to pursue a given goals. If the goal is to expand the business, the following could be the three alternatives.

- Sold new products to the existing product line
- Finding new markets, a part from the present market territories.
- Manufacturing within the organization, the components, which were earlier procured from outside.

Similarly, if the goal is to attain stability, the alternative strategies could be to maintain the following.

- The existing range of products
- The existing markets
- The functions presently being carried out.

<u>Select the best strategy</u>: For the firm to be more successful, it is necessary to focus its strategies around its strengths and opportunities. It is a prerequisite that the numbers of the organization agree on the strategic plan. Such a plan, which has been generally agreed upon, is normally considered as the best strategy.

<u>Establish strategic business units (SBUs)</u>: It is more strategic to define a business unit in terms of customer groups, needs and/or technology and set up the business unit accordingly. Most of companies define their businesses in term of products.

<u>Fix target allot resources to each SBU</u>: The development of SBUs based on appropriate finding the top level management knows that its portfolio has certain old, established relatively new, and brand new products.

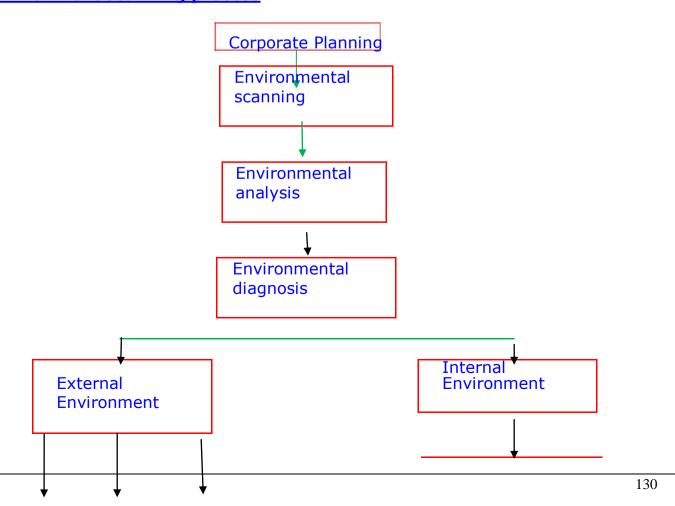

Resources should be allocated based on market growth rate and relative market share of SBUs. Here resources mean executive talent money and time.

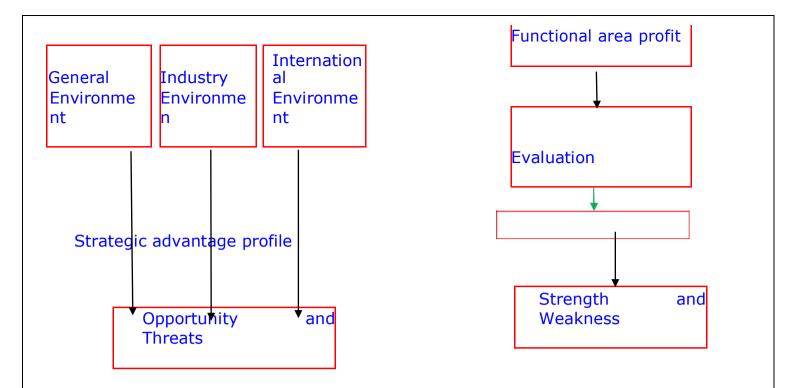

<u>Developing operating plans</u>: The operating plan explain how the long-term goals of the organization can be met, the corporate plans reveal how much the projected sales and revenue are where the top management finds a significance gap between the targeted sales and actual sales, it can either develop the existing business or acquire a new one to fill the gap.

<u>Monitor performance</u>: The results of the operating plans should be will monitored from time to time. In the case of poor performance, check up with the members of the team to find out their practical problems and sort these out. Also, it is essential to verify whether there are any gaps in formulating the operating/tactical plans.

<u>Revise the operating plans, where necessary</u>: It is necessary to rise the operational plans particularly when the firm does not perform as well as expected. The planes can be revised in terms of focus, resource or time frame.

Environment scanning process

<u>Environmental Scanning</u>: Environmental scanning is a vital part of the corporate planning process. Effective planners try to anticipate what is likely to happen or attempt to influence the environment in favourable directions. This requires long-term strategic vision and commitments to corporate planning.

Why environmental scanning:

The banks and business enterprises in the public sector are being disinvested by the government. The government policies keeping changing the current focus of the government of India has been an globalization, privatization, deregulation. As a results foreign goods are being dumped into the markets.

Computers have wiped out the market for typewriters and electronic type writers. Info-tech industry, which was very strong for over decades, suddenly revealed downtrend.

The advent of television channels has almost zeroed down the market for VCR and significantly affected the flow of film viewer traffic.

<u>Environmental analysis</u>: Refers to the process of analyzing the environment, component-wise or sector-wise to provide a basis for further diagnosis. It interrelates the formation of objectives, generation of alternative strategies, and other related issues.

<u>Environmental diagnosis</u>: Comprises the managerial decisions based on the perceived opportunities and threats of the firm. In effect, it helps to determine the nature of the impending tasks to take advantage of opportunity or to effectively manage threat.

1. <u>General environment</u>: A firm is said to be more effective when its strategy caters to the needs effective when its strategy caters to the needs of the environment. The additional features added to the main product at times

could provide a new life to the main product. The corporate units, which realize this, will survive in the long-run.

Thus, the major causes of growth, decline, and other large scale changes in firms are the factor in the external environment, not internal development.

- Socio-economic sector
- The technological sector
- The government sector

<u>2.Industry environment</u>: It is an important component of the overall environmental analysis as input for corporate planning. Industry refers to the group of firms carrying on similar activity. It has three sectors, customers, suppliers and competitors.

<u>Customers</u>: The strategist must identify and analyze the customers for the organization locates the potential customers and the emerging changes in their buying pattern. It is necessary to identify the profile of buyers in terms of their needs and preferences based on the basic demographic factors such as age, income size of household and consumption pattern. These factors create the primary demand for products or service and help to scan the geographical environment for potential market and customers.

<u>Suppliers</u>: Strategist also must determine the availability and costs of supply condition including raw materials, energy, prevailing technology, money and labour. The supplier can influence a firm and its strategy, particularly when the firm is outsourcing its logistic requirements.

<u>Competition</u>: The strategist moulds his strategy in the light of the competitor's strategy, the exit or entry of competitors to be analyzed and diagnosed.

3. International Environment: The strategy of globalization implies a great source of opportunities and also threats to business firms. Such firms, which an make use of the opportunities, would flourish and those, which cannot gear up, would demise.

<u>Internal Environment analysis and diagnosis</u>: Internal environmental analysis and diagnosis is a process of analyzing and diagnosing the firm's internal strengths and weaknesses. By identifying its strength and weaknesses, the firm can strategically exploit the available opportunities, overcome threats, and correct weaknesses placing itself at a competitive advantage.

<u>Conducting internal analysis and diagnosis</u>: Identify first the internal strength and weaknesses. The strength and weaknesses may include the following.

- Marketing factors
- research and development
- Engineering design and management
- Production management
- Managerial personnel
- Accounting and financial policies and procedures.

Profile of research and development:

- > Financial resources (budget to conduct research, to develop new products and processes, improve existing processes and so on)
- Infrastructure (in terms of state-of-the-art technologies)
- Human resources (how many scientist and engineers are required, presently available, turnover of key personnel)
- Organizational system (system to monitor technological developments from time to time)

<u>Strategy advantage profile</u>: The ultimate result of such a detailed internal analysis to build a strategic advantage profile strategic advantage profile is a tool used to evaluate systematically the enterprises internal factors the competitive strengths or weaknesses for each internal area such as marketing, R &D and others

<u>SWOT Analysis</u>: SWOT analysis is defined as the rational and overall evaluation of a company's strength, weakness, opportunities, and threats which are likely to affect the strategic choice significantly.

External environment analysis (Opportunities and Threats): The external environment has a profound impact on the business operations irrespective of the nature and size of the business. The business has to monitor its key macroenvironment forces and micro economic parties.

<u>Opportunities</u>: It necessary should identify what opportunities are available to it to focus upon. The latest technology, deregulated or free markets, liberalized rules and regulations and other may make a lot of difference for a business organization provided it can envision how to avail these visionary identify opportunities from treats.

<u>Threats</u>: Some development in the external environment represents threats. A threat is a challenge posed by an unfavorable trend or a development that results

in the loss of sales or profit till a defensive marketing action is initiated. A few example of threat could be outlined as change in government policy such as liberalization privatization and globalization, changing technology changing value systems environmental constraints law and order.

Internal environment analysis (Strength and Weakness): It is necessary to analyze one's own strength and weakness periodically to sustain the degree of its competitive strength. Generally top management or an outside consultant reviews competencies pertaining to marketing, financial, manufacturing and organizational system and rates each factor as a major strength, minor strength, mental, factor, minor weakness, or major weakness.

<u>Strength</u>: It is not necessary that a business organization has to correct all its weakness nor that its propagate its strength. The big question is whether the business should limit itself to those opportunities, where its possesses the required strength or should it consider better opportunities where it might have to develop certain strength.

<u>Weakness</u>: Some times the company may not do well not because its departments lack the required motivation but because they do not work together as a team for example consider the case of an electronics company which employs engineers, sales and service staff for its operations. It is not adequate if they keep on doing their work. The organization becomes more effective only when they work as a team. It is therefore, critically important to build effective teams and assess the effectiveness of these teams. This is a part of the internal environmental audit. Progressive companies adopt this strategy.

STRENGTHS

- Value for money programme
- 2. Pool of trained faculty
- 3. Wide choice of offering
- 4. National network of well equipped training centre

WEAKNESS:

- Not aggressive in selling
- 2. Course differentials not sharp
- Counselor enthusiasm in adequate

4. Customers service not focused enough

OPPORTUNITIES:

- Growing demand for computer education
- Computer library becoming a necessity
- 3. Growth of rich training needs
- 4. Need vfor customized training modules.

THREATS:

- 1. Rise in number of competitions
- 2. High rate of technological obsolescence
- Commoditization of training under cutting of fees.

Strategy Formulation: This is often referred as strategic planning or long-range planning. This process is primarily analytical, not action-oriented. The strategy formulation process is concerned with developing a corporate mission, objectives, strategy and policy.

This process involves scanning external and internal environmental factors, analysis of the strategic factors and generation, evaluation, selection of the best alternative strategy appropriate to the analysis.

Henry Mint berg has pointed out that corporations objectives and strategies are strongly affected by top management's view of the world. This view determines the mode to be used in strategy formulation. These modes includes

Entrepreneurial mode: one powerful individual formulates Strategy.

The focus is on opportunities rather than on problems.

Strategy is guided by the founder's own vision of direction.

Adaptive Mode: This strategy formulation mode is characterized by reactive solutions to existing problems rather than a proactive search for new opportunities.

<u>Planning Mode:</u> Analysts assume main responsibility for strategy formulation.

Strategic planning includes both the practice search for new opportunities and the reactive solution of existing problems.

Thus, strategy formulation process involves environmental analysis organizational analysis, development of strategic alternatives and analysis and selecting the most appropriate strategy from the alternatives developed. The corporate level strategies include:

- Stability strategies Growth strategies
- Retrenchment strategies
- Combination strategy or port-folio restructuring

Implementation of strategies:

- Institutionalization of strategy
- Setting proper organizational climate
- Developing appropriate operating plans
- Developing appropriate organizational structures Periodic review of strategy

CONTEMPORARY MANAGEMENT PRACTICES

<u>Management Information Systems</u>: MIS refer to the process of covering the application of people technology and procedures to solve business problems.MIS distinct from regular information systems in that they are used to analyze other information systems applied in operational activities in the organization.

It is also commonly used to refer to the group information management methods tied to the automation or support of human decision making.

Ex: Decision support systems, expert systems earlier, when computers were newly launched, business computers were use for the practical business of computing the **Payroll** and keeping track of account payable and receivable. As applications were developed that provided managers with information about sales, inventories and other data that would help in managing the enterprise, the term "MIS" arose to describe there kind of applications.

<u>Definition:</u> It can be defined as "Research in the information systems field examines more than that the technological system, or just the social system, or even the two side by side, in addition, it investigates the phenomena that emerge when the two interact".

<u>End – use Computing</u>: This term broadly meaning that there are no intermediary services for making use of computer, the end-user acquires the hardware and software and run their applications without the services of the specialist IS department

Factors for its growth:

Growth of Micro Computers

Dissatisfaction (delays, poor quality of centralized application systems built by the IT specialist.

Increase in computer literacy among end-users

<u>Materials Requirement Planning (MRP):</u> MRP is a software base production planning and inventory control system used to manage manufacturing processes.

Objectives:

- To ensure the availability of materials and products for production, delivery to customers.
- To maintain the lowest possible level of inventory
- To plan manufacturing activities, delivery schedules and purchasing activities.

<u>Just – In – Time (JIT):</u> When components arrive as and when required in a manufacturing operating by workers. It is called just-in-time.

Some we would at a stroke eliminate any inventory of parts, they would simply arrive just-in-time. Similarly we could produce finished goods just-in-time to be handed to a customer who wants them. So at conceptual extremes. JIT has no need for inventory or stock, either of raw materials or work in progress or finished goods.

<u>Total Quality Management:</u> It is term first coined by the U.S Naval air systems command to describer, its Japanese-style management approach to quality improvement. It is a management approach to long-term success through customer satisfaction.

In a TQM effort, all members of an organization participate in improving processes, products, services and the culture in which they work.

<u>Six Sigma</u>: Six sigma is a set of practices developed by Motorola to systematically improve processes by eliminating defects. A defect is defined as non-conformity of a product or service to its specifications.

Six Sigma refers to the ability of highly capable processes to produce output within specification. In particular processes that operate with Six Sigma quality produce at defect level below 3.4 defects per million opportunities.

The statistical representation of six sigma quantitatively how a process is performing. To achieve six sigma, a process must not produce more than 3.4 defects per million opportunities. A six sigma defect is defined as anything outside of customer specification. A six sigma opportunity is then the total quantity of chances for a defect.

<u>Definition:</u> Six Sigma at any organizations simply means a measure of quality that strives for near perfection. Six sigma is a disciplined, data-driven approach and

methodology for eliminating defects in any process from manufacturing to transactional and from product to service.

<u>Capability Maturing Model:</u> Capability maturity Model (CMM) is a collection of instructions an organization can follow with the purpose to gain better control over its software development process.

The CMM ranks software development organizations in a hierarchy of five levels each with a progressively greater capability of producing quality software. Each level is described as a level of maturity. Those 5 levels are equipped with different number of instruction to follow.

<u>Level - 1</u> - **Initial :** At maturity level-1 processes are usually ad hoc and the organization usually does not provide a stable environment

<u>Level - 2</u> - **Repeatable:** At this maturity level-2, software development successes are repeatable. The organization may use some basic project management to track cost and schedule.

<u>Level - 3</u> - **Defined:** A maturity level-3, processes are well characterized and understood, and are described in standards procedure, tools, and methods.

<u>Level - 4</u> - **Managed:** Using precise measurement, management can effectively control the software development effort. In particular, management can identify ways to adjust and adopt process to particular projects without measurable losses of quality or deviations from specifications.

<u>Level - 5-</u> **Optimizing:** This maturity level focuses on continually improving process performance through both incremental and innovative technological improvement.

<u>Supply Chain Management</u>: It is the process of planning, implementing and controlling the operations of the supply chain as efficiently as possible supply chain management spans all movement and storage of raw materials, work-in-process inventory, and finished goods from point-of-origin to point-of consumption.

<u>Enterprise Resource Planning (ERP)</u>: It integrate all data can processes of an organization into a unified system. A typical ERP system will use multiple components of computer software and hardware to achieve the integration 4 key ingredient of most ERP systems is the use of a unified database to store date.

ERP systems cover all basic functions of an organization, regardless of the organizations business, non-profit organization, non-governmental organization or government.

Performance Management:

Performance Management is covered with communication. This is done by creating a climate in which a continuing dialogue between managers and the members of their teams takes place to define expectations and share information on the organizations mission, values and objectives. This establishes mutual understanding of what is to be achieved and a framework for managing and developing people to ensure that it will be achieved

--- By Armstrong & Murlis (1994).

Performance Management is about managing the organization. It is a natural process of management, not a system or technique. --- By Fowler (1990).

Business Process Outsourcing (BPO): BPO refers to a decision to sub-contract some or all non-core processes. The main motive for business process outsourcing is allow the company to invest more time, money and human resources into core activities and building strategies, which fuel company growth.

The global market to day is highly competitive and ever-changing. A company must focus on improving productivity and yet, cut down costs. There, a lot of tasks that use up precious time, resources and energy, are being outsourced. BPOs or the units to which work is being outsourced, are flexible, quicker, cheaper and very efficient.

BPO is the contracting of specific business task, such as payroll to a tird-party service provider.

BPO is often divided into two categories

- 1. <u>Back Office Outsourcing</u>: This includes internal business functions such as billing or purchasing.
- 2. <u>Front Office Outsourcing</u>: This includes customer-related services such as marketing or technical support.

Business Process Re-engineering (BPR):

<u>Definition</u>: The fundamental rethinking and radical redesign of business processes to achieve dramatic improvements in critical contemporary measures of performance, such as cost, quality service and speed.

--- By Hammer and Champy

BPR is a management approach aiming at improvements by means of elevating efficiency and effectiveness of the processes that exist within and across

	ons. They key form a "clea these prod	n slate" pe	rspective a	nd determin	e how they	
construct	these proc	.63363 10	ппргоче	now ency	conduct	business.

Bench Marking: A process of searching for, identifying, and using ides, techniques and improvement of other companies/situations in its own activities.

<u>Definition</u>: A systematic and ongoing process of improving performance by measuring a product, service or process against a partner that has mastered it.

- 1. In short comparing methods against the best to identify changes.
- 2. A quality management tool that includes a set of practices aimed at improving product and service quality

Bench marking involves measuring the performance of the organization, team or individuals against the best practice for the industry, function or particular activity.

Balance scorecard: It is a management system that enables organizations to clarify their vision and strategy and translate them into action. It provides feedback around both the internal business processes and external outcomes in order to continuously improve strategic performance and result. When full deployed, the balance scorecard transforms strategic planning from an academic exercise into the nerve center of an enterprise.

The balance scorecard suggests that we view the organization from four perspectives' and to develop metrics.

The learning and growth perspective The business process perspective The customer perspective The financial perspective.
