

# **WEB APPLICATION DEVELOPMENT LAB**

## **(R20A1282)**

### **LABORATORY MANUAL**

**B.TECH  
(III YEAR – I SEM)  
(2023-2024)**

**PREPARED BY  
I.UMA MAHESWARA RAO  
K.SHANTHI**

**DEPARTMENT OF INFORMATION TECHNOLOGY  
MALLA REDDY COLLEGE OF ENGINEERING &  
TECHNOLOGY**

**(Autonomous Institution – UGC, Govt. of India)**

Recognized under 2(f) and 12 (B) of UGC ACT 1956

(Affiliated to JNTUH, Hyderabad, Approved by AICTE - Accredited by NBA & NAAC – ‘A’ Grade - ISO 9001:2015 Certified)  
Maisammaguda, Dhulapally (Post Via. Hakimpet), Secunderabad – 500100, Telangana State, India

## **DEPARTMENT OF INFORMATION TECHNOLOGY**

### **Vision**

- To acknowledge quality education and instill high patterns of discipline making the students technologically superior and ethically strong which involves the improvement in the quality of life in human race.

### **Mission**

- To achieve and impart holistic technical education using the best of infrastructure, outstanding technical and teaching expertise to establish the students into competent and confident engineers.
- Evolving the center of excellence through creative and innovative teaching learning practices for promoting academic achievement to produce internationally accepted competitive and world class professionals.

## **PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)**

### **PEO1 – ANALYTICAL SKILLS**

1. To facilitate the graduates with the ability to visualize, gather information, articulate, analyze, solve complex problems, and make decisions. These are essential to address the challenges of complex and computation intensive problems increasing their productivity.

### **PEO2 – TECHNICAL SKILLS**

2. To facilitate the graduates with the technical skills that prepare them for immediate employment and pursue certification providing a deeper understanding of the technology in advanced areas of computer science and related fields, thus encouraging to pursue higher education and research based on their interest.

### **PEO3 – SOFT SKILLS**

3. To facilitate the graduates with the soft skills that include fulfilling the mission, setting goals, showing self-confidence by communicating effectively, having a positive attitude, get involved in team-work, being a leader, managing their career and their life.

### **PEO4 – PROFESSIONAL ETHICS**

To facilitate the graduates with the knowledge of professional and ethical responsibilities by paying attention to grooming, being conservative with style, following dress codes, safety codes, and adapting themselves to technological advancements.

## **PROGRAM SPECIFIC OUTCOMES (PSOs)**

After the completion of the course, B. Tech Computer Science and Engineering, the graduates will have the following Program Specific Outcomes:

1. **Fundamentals and critical knowledge of the Computer System**:- Able to Understand the working principles of the computer System and its components , Apply the knowledge to build, asses, and analyze the software and hardware aspects of it .
2. **The comprehensive and Applicative knowledge of Software Development**: Comprehensive skills of Programming Languages, Software process models, methodologies, and able to plan, develop, test, analyze, and manage the software and hardware intensive systems in heterogeneous platforms individually or working in teams.
3. **Applications of Computing Domain & Research**: Able to use the professional, managerial, interdisciplinary skill set, and domain specific tools in development processes, identify the research gaps, and provide innovative solutions to them.

## PROGRAM OUTCOMES (POs)

### Engineering Graduates will be able to:

- 1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
  
- 2. Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
  
- 3. Design / development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
  
- 4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
  
- 5. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
  
- 6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
  
- 7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
  
- 8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
  
- 9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
  
- 10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
  
- 11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multi disciplinary environments.
  
- 12. Life- long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

## MALLA REDDY COLLEGE OF ENGINEERING & TECHNOLOGY

Maisammaguda, Dhulapally Post, Via Hakimpet, Secunderabad – 500100

---

### DEPARTMENT OF INFORMATION TECHNOLOGY

#### GENERAL LABORATORY INSTRUCTIONS

1. Students are advised to come to the laboratory at least 5 minutes before (to the starting time), those who come after 5 minutes will not be allowed into the lab.
2. Plan your task properly much before to the commencement, come prepared to the lab with the synopsis / program / experiment details.
3. Student should enter into the laboratory with:
  - a. Laboratory observation notes with all the details (Problem statement, Aim, Algorithm, Procedure, Program, Expected Output, etc.,) filled in for the lab session.
  - b. Laboratory Record updated up to the last session experiments and other utensils (if any) needed in the lab.
  - c. Proper Dress code and Identity card.
4. Sign in the laboratory login register, write the TIME-IN, and occupy the computer system allotted to you by the faculty.
5. Execute your task in the laboratory, and record the results / output in the lab observation note book, and get certified by the concerned faculty.
6. All the students should be polite and cooperative with the laboratory staff, must maintain the discipline and decency in the laboratory.
7. Computer labs are established with sophisticated and high end branded systems, which should be utilized properly.
8. Students / Faculty must keep their mobile phones in SWITCHED OFF mode during the lab sessions. Misuse of the equipment, misbehaviors with the staff and systems etc., will attract severe punishment.
9. Students must take the permission of the faculty in case of any urgency to go out ; if anybody found loitering outside the lab / class without permission during working hours will be treated seriously and punished appropriately.
10. Students should LOG OFF/ SHUT DOWN the computer system before he/she leaves the lab after completing the task (experiment) in all aspects. He/she must ensure the system / seat is kept properly.

**Head of the Department**

**Principal**

## **Objectives:**

- To develop an ability to design and implement static and dynamic website
- Choose best technologies for solving web client/server problems
- Create conforming web pages
- Use JavaScript for dynamic effects
- To prepare PHP scripts
- Use JavaScript & PHP to validate form input entry
- Understand, analyze and create XML documents and XML Schema
- Understand, analyze and build web applications using PHP
- Use appropriate client-side or Server-side applications
- Handling Cookies and Sessions using PHP, SERVLETS and JSP
- Manage normal and abnormal interactions with databases using JDBC.

## **Outcomes:**

**Upon successful completion of this course, the students will be able to:**

- Design and implement dynamic websites with good aesthetic sense of designing and latest technical know-how's
- Create web pages using HTML and Cascading Styles sheets
- Analyze a web page and identify its elements and attributes
- Create dynamic web pages using JavaScript
- Build web applications using PHP
- Create XML documents and XML Schema
- Understand, analyze and apply the role of languages like HTML, CSS, XML, JavaScript, PHP, SERVLETS, JSP and protocols in the workings of the web and web applications
- Have a Good grounding of Web Application Terminologies, Internet Tools, E – Commerce and other web services
- Develop interactive web applications using HTML forms and servlets.
- Use request and response objects provided to a servlet to read parameters and to produce an HTML response.
- Develop JSP applications implementing Session management and Data base Connectivity.

## INDEX

S.No	List of programs	Pg.No.
1	<p>Write an <b>XML</b> file to display the Book information which includes the following:</p> <p>1) Title of the book 2) Author Name 3) ISBN number 4) Publisher name 5) Edition 6) Price</p>	
2	Design an <b>XML</b> document to store information about a student in an engineering college affiliated to JNTU	
3	<p><b>JDBC:</b></p> <ul style="list-style-type: none"> <li>a. Write a program to select a query using JDBC.</li> <li>b. Write a program to update customer information using JDBC.</li> </ul>	
4	<p><b>SERVLETS:</b></p> <ul style="list-style-type: none"> <li>a. Write a program to generate a plain text.</li> <li>b. Write a program to display cookie id.</li> </ul>	
5	<p><b>JAVA SERVER PAGES:</b></p> <ul style="list-style-type: none"> <li>a. Write a program to represent basic arithmetic functions.</li> <li>b. Write a program to display a string.</li> <li>c. Write a program to create check boxes.</li> </ul>	
6	<p><b>JAVA BEANS:</b></p> <ul style="list-style-type: none"> <li>a. Write a program to generate plain text.</li> <li>b. Write a simple web-based Hello World application using Spring MVC framework.</li> <li>c. Write a simple web-based Hello World application using Spring Django framework</li> </ul>	

## **WEEK 1:**

**Design the following static web pages required for an online book store web site.**

**1) HOME PAGE:** The static home page must contain three **frames**.

**2) LOGIN PAGE**

**3) CATALOGUE PAGE:** The catalogue page should contain the details of all the books available in the web site in a table.

**4) REGISTRATION PAGE**

**Aim:** Design the following static web pages required for online book store.

**1. Home page:-** the static home page must contains three pages

**2. Top frame:-** logo and college name and links to homepage, login page, registration page and catalogue page

**3. Left frame:-** at least four links for navigation which will display the catalogue of Respective links

**4. Right frame:-** the pages to links in the left frame must be loaded here initially it Contains the description of the website.

**DESCRIPTION:** In this program the entire web paged are created by using basic HTML tags. Home page is divided into 3 frames by using `<frameset>` and `<frame>` tags. A frame is used to display a web page within a web page.

### **<frameset>:**

- The `<frameset>` tag defines a frameset.
- The `<frameset>` element holds one or more `<frame>` elements.
- Each `<frame>` element can hold a separate document.
- The `<frameset>` element specifies HOW MANY columns or rows there will be in the frameset, and HOW MUCH percentage/pixels of space will occupy each of them.

### **<frame>:**

- The `<frame>` tag defines one particular window (frame) within a `<frameset>`.
- Each `<frame>` in a `<frameset>` can have different attributes, such as border, scrolling, the ability to resize, etc.

## **PROGRAM:**

### **home.html:**

```
<frameset rows="40%,*">
    <frame src="top.html" noresize scrolling="NO" name="topframe">
<frameset cols="15%,*">
    <frame src="left.html" noresize scrolling="NO" name="leftframe">
    <frame src="right.html" noresize name="rightframe" scrolling="auto">
</frameset>
</frameset>
```

### **top.html:**

```
<html>
    <head>
        <title>Top Frame</title>
    </head>
    <body bgcolor="YellowGreen ">
        
```

```

## **WEEK 3: JDBC:**

- A. Write a program to select a query using JDBC.**
- B. Write a program to update customer information using JDBC.**

## **WEEK 3:**

### **a. Write a program to select a query using JDBC.**

#### **DBExample.java**

```
import java.io.*;  
import javax.servlet.*;  
import javax.servlet.http.*;  
import java.util.*;  
import java.sql.*;  
  
public class DBExample extends HttpServlet{  
    public void doGet(HttpServletRequest request,  
                      HttpServletResponse response)  
        throws ServletException, IOException  
    {  
        String JDBC_DRIVER="com.mysql.jdbc.Driver";  
        String DB_URL="jdbc:mysql://localhost/csec";  
        String USER = "root";  
        String PASS = "TIGER";  
        response.setContentType("text/html");  
        PrintWriter out = response.getWriter();  
        out.println("<html><body><h1>Welcome to MRCET</h1>\n") ;  
        try{  
            Class.forName("com.mysql.jdbc.Driver");  
            Connection conn = DriverManager.getConnection(DB_URL,  
                USER, PASS);  
            Statement stmt = conn.createStatement();  
            String sql;  
            sql = "SELECT * FROM Emp";  
            ResultSet rs = stmt.executeQuery(sql);  
            while(rs.next())  
            {  
                out.println("ID: " + rs.getString(1));  
            }  
        }  
    }  
}
```

```
out.println("Age: " + rs.getString(2));
out.println("First Name: " + rs.getString(3)+"<br>");
}
rs.close();
stmt.close();
conn.close();
}catch(SQLException se){
out.println(se.getMessage());
}catch(Exception e){
out.println(e.getMessage());
}
out.println("</body></html>");
}
}
```

**web.xml:**

```
<?xml version="1.0" encoding="UTF-8"?>
<web-app>
<servlet>
<servlet-name>DBExample</servlet-name>
<servlet-class>DBExample</servlet-class>
</servlet>
<servlet-mapping>
<servlet-name>DBExample</servlet-name>
<url-pattern>/db</url-pattern>
</servlet-mapping>
</web-app>
```

**Output:**

## **WEEK 3:**

**b. Write a program to update customer information using JDBC.**

### **Jdexample2.html:**

```
<!DOCTYPE html>
<html>
<head>
<title>Insert Data</title>
</head>
<body>
<!-- Give Servlet reference to the form as an instances
     GET and POST services can be according to the problem statement-->
<form action=".//InsertData" method="post">
<p>ID:</p>
<!-- Create an element with mandatory name attribute,
     so that data can be transfer to the servlet using getParameter() -->
<input type="text" name="id"/>
<br/>
<p>String:</p>
<input type="text" name="string"/>
<br/><br/><br/>
<input type="submit"/>
</form>
</body>
</html>
```

### **Java1.java:**

```
import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.SQLException;
// This class can be used to initialize the database connection
public class DatabaseConnection {
```

```

protected static Connection initializeDatabase()
    throws SQLException, ClassNotFoundException
{
    String dbDriver = "com.mysql.jdbc.Driver";
    String dbURL = "jdbc:mysql:// localhost:3306/";
    String dbName = "demoprj";
    String dbUsername = "root";
    String dbPassword = "root";

    Class.forName(dbDriver);
    Connection con = DriverManager.getConnection(dbURL+dbName,dbUsername,dbPassword);
    return con;
}
}

```

**Java2.java:**

```

import java.io.IOException;
import java.io.PrintWriter;
import java.sql.Connection;
import java.sql.PreparedStatement;
import javax.servlet.ServletException;
import javax.servlet.annotation.WebServlet;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
// Import Database Connection Class file
import code.DatabaseConnection;
@WebServlet("/InsertData")
public class InsertData extends HttpServlet {
    private static final long serialVersionUID = 1L;
    protected void doPost(HttpServletRequest request, HttpServletResponse response) throws
    ServletException, IOException
    {
        try {

```

```

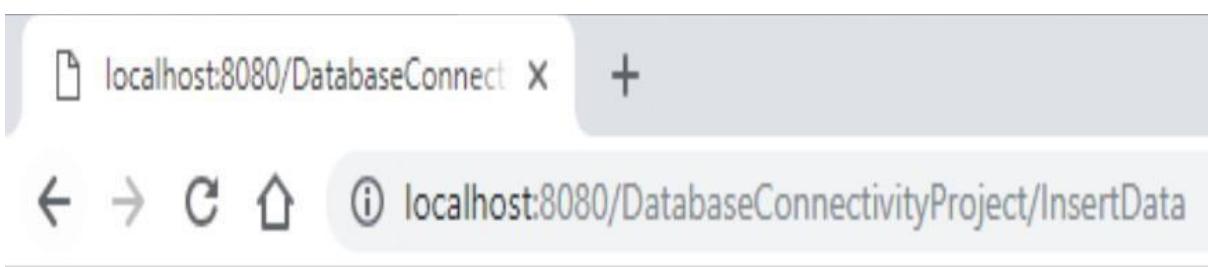

String jdbcUrl = "jdbc:mysql://localhost:3306/BORAJI";
String username = "root";
String password = "admin";
String sql = "update customer set name='Michael Sam' where cus_id=1";

try (Connection conn = DriverManager.getConnection(jdbcUrl, username, password)) {
    Statement stmt = conn.createStatement();
    stmt.executeUpdate(sql);
    System.out.println("Database updated successfully ");
    PrintWriter out = response.getWriter();
    out.println("<html><body><b>Successfully Inserted<br>" +
               "</b></body></html>");
}
catch (Exception e) {
    e.printStackTrace();
}
}
}

```

## OUTPUT:

The screenshot shows a web browser window with the title 'Insert Data'. The address bar displays the URL 'file:///C:/Users/OneDrive/Desktop/nl/insert.html'. The page content includes two text input fields. The first field is labeled 'ID:' and contains an empty input box. The second field is labeled 'String:' and contains the text 'hello'. Below these fields is a 'Submit' button.

**Successfully Inserted**

**WEEK: 4 SERVLETS:**

- c. Write a program to generate a plain text.
- d. Write a program to display cookie id.

**WEEK 4:**

**A. Implement the following web applications using servlets USING SERVLET**

**Filename:greet.html**

```
<html>
<body bgcolor="yellow">
<center>
<h1>USER NAME ENTRY SCREEN</h1>
<form action="greet">
USERNAME <input type="text" name
="t1">
<br><br>
<input type="submit" value="Submit">
</form></center>
</body>
</html>
```

**File Name:GreetingServlet.java**

```
import javax.servlet.*;
import java.io.*;
public class GreetingServlet extends GenericServlet
{
    public void service(ServletRequest req, ServletResponse res) throws
ServletException,IOException
    {
        String name=req.getParameter("t1");
        res.setContentType("text/html");
        PrintWriter pw=res.getWriter();
        pw.println("<html>");
        pw.println("<body bgcolor=white>");
        pw.println("<h1>HELLO"+name+"WELCOME TO OUR WEBSITE</h1>");
        pw.println("</body>");
        pw.println("</html>");
        pw.close();
    }
}
```

**web.xml**

```
<?xml version="1.0"?>

<web-app>

<servlet>

<servlet-name>one</servlet-name>

<servlet-class>GreetingServlet</servlet-class>

</servlet>

<servlet-mapping>

<servlet-name>one</servlet-name>

<url-pattern>/greet</url-pattern>

</servlet-mapping>

</web-app>
```

**OUTPUT:**

## **WEEK 4:**

**b. Write a program to display cookie id.**

### **index.html**

```
<html>
<body bgcolor="pink">
<form action="servlet1">
<center>
NAME <input type="text" name="username"/><br><br>
<input type="submit" value="submit"/>
</center>
</form>
</body>
</html>
```

### **FirstServlet.java**

```
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;
public class FirstServlet extends HttpServlet {
    public void doPost(HttpServletRequest request,
HttpServletResponse response){
        try{
            response.setContentType("text/html");
            PrintWriter out = response.getWriter();
            String n=request.getParameter("username");
            out.println("Your Name is "+n);
        }
    }
}
```

```
er("userName");

out.print("Welcome"+
n);
Cookie ck=new
Cookie("uname",n);//
creating cookie object

response.addCookie(c
k);//adding cookie in
the response
//creating submit
button
out.print("<form
action='servlet2'>");
out.print ("<input
type='submit'
value='go'>");
out.print("</form>");
out.close();
}
catch(Exception e)
{
System.out.println(e);
}
}
```

## **SecondServlet.java**

```
import java.io.*;
import javax.servlet.*;
import javax.servlet.http
.*;
```

```
public class  
SecondServlet extends  
HttpServlet {  
  
public void  
doPost(HttpServletRequest  
request,  
HttpServletResponse  
response) {  
  
try{  
  
response.setContentType  
("text/html");  
  
PrintWriter  
out=response.getWriter  
();  
  
Cookie  
ck[]=request.getCookie  
s();  
  
out.print("Hello"+ck[0]  
.getValue());  
  
out.close();  
  
}  
catch(Exception e)  
{System.out.println(e);  
}  
}  
}
```

## **web.xml**

```

## OUTPUT:

### WEEK 6:

#### JAVA BEANS:

- a. Write a program to generate plain text.
- b. Write a simple web-based Hello World application using Spring MVC framework.
- c. Write a simple web-based Hello World application using Spring Django framework

#### a. Write a program to generate plain text.

```

//Student.java

// Java Program of JavaBean class

package mrcetjavabean;

public class Student implements java.io.Serializable
{
    private int id;
    private String name;
    public Student()
    {

```

```
    }
    public void setId(int id)
    {
        this.id = id;
    }
    public int getId()
    {
        return id;
    }
    public void setName(String name)
    {
        this.name = name;
    }
    public String getName()
    {
        return name;
    }
}
```

### **//Test.java**

```
// Java program to access JavaBean class
package mrcetjavabean;
public class Test {
    public static void main(String args[])
    {
        Student s = new Student(); // object is created
        s.setName("MRCET-IT"); // setting value to the object
        System.out.println(s.getName());
    }
}
```

**B. Write a simple web-based Hello World application using Spring MVC framework.**

**//HelloController.java**

```
package mrcetsprings;
import org.springframework.stereotype.Controller;
import org.springframework.web.bind.annotation.RequestMapping;
import org.springframework.web.bind.annotation.RequestMethod;
import org.springframework.ui.ModelMap;
@Controller
@RequestMapping("/hello")
public class HelloController {
    @RequestMapping(method = RequestMethod.GET)
    public String printHello(ModelMap model) {
        model.addAttribute("message", "Hello Spring MVC Framework!");
        return "hello";
    }
}
```

**// The content of Spring Web configuration file web.xml**

```
<web-app id = "WebApp_ID" version = "2.4"
    xmlns = "http://java.sun.com/xml/ns/j2ee"
    xmlns:xsi = "http://www.w3.org/2001/XMLSchema-instance"
    xsi:schemaLocation = "http://java.sun.com/xml/ns/j2ee
    http://java.sun.com/xml/ns/j2ee/web-app_2_4.xsd">

    <display-name>Spring MVC Application</display-name>
    <servlet>
        <servlet-name>HelloWeb</servlet-name>
        <servlet-class>
            org.springframework.web.servlet.DispatcherServlet
        </servlet-class>
        <load-on-startup>1</load-on-startup>
    
```

```
</servlet>
<servlet-mapping>
    <servlet-name>HelloWeb</servlet-name>
    <url-pattern>/</url-pattern>
</servlet-mapping>
</web-app>
```

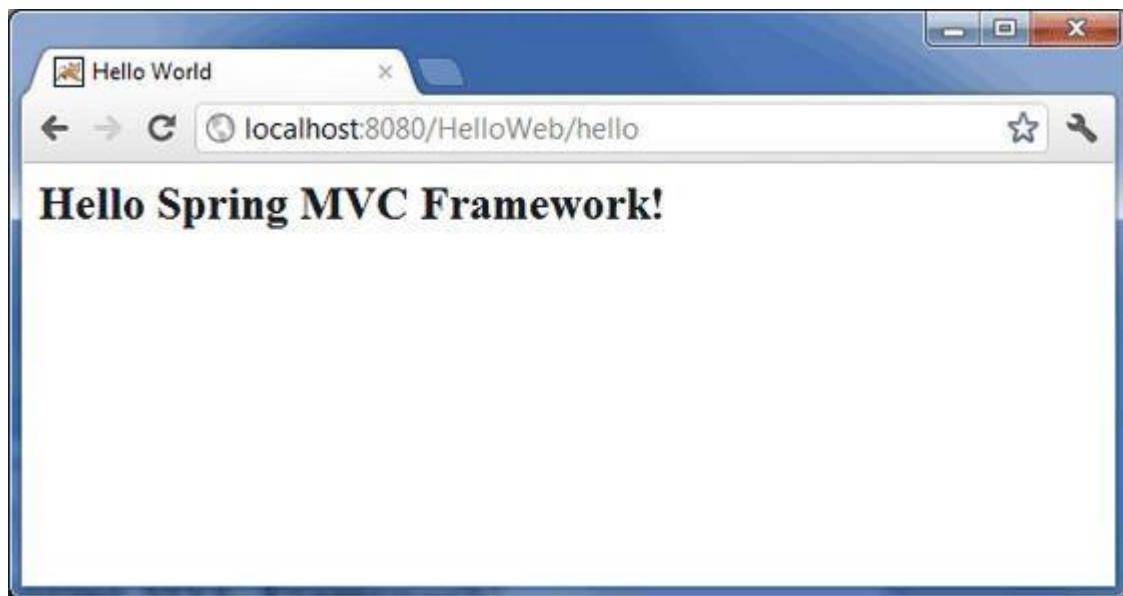

**//The content of another Spring Web configuration file HelloWeb-servlet.xml**

```
<beans xmlns = "http://www.springframework.org/schema/beans"
    xmlns:context = "http://www.springframework.org/schema/context"
    xmlns:xsi = "http://www.w3.org/2001/XMLSchema-instance"
    xsi:schemaLocation = "http://www.springframework.org/schema/beans
    http://www.springframework.org/schema/beans/spring-beans-3.0.xsd
    http://www.springframework.org/schema/context
    http://www.springframework.org/schema/context/spring-context-3.0.xsd">
    <context:component-scan base-package = "com.tutorialspoint" />
    <bean class = "org.springframework.web.servlet.view.InternalResourceViewResolver">
        <property name = "prefix" value = "/WEB-INF/jsp/" />
        <property name = "suffix" value = ".jsp" />
    </bean>
</beans>
```

**//The content of Spring view file hello.jsp**

```
<%@ page contentType = "text/html; charset = UTF-8" %>
<html>
    <head>
        <title>Hello World</title>
    </head>
    <body>
        <h2>${message}</h2>
    </body>
</html>
```

## **OUTPUT:**

## **C. Write a simple web-based Hello World application using Spring Django framework**

### **Initial Set Up**

To begin, open up a new command line shell or use the built-in terminal on VS Code. For the latter click on “Terminal” at the top and then “New Terminal” to bring it up on the bottom of the screen. Make sure you are not in an existing virtual environment by checking there is nothing in parentheses before your command line prompt. You can even type deactivate to be completely sure. Then navigate to the code directory on your Desktop and create a helloworld directory with the following commands.

```
# Windows  
> cd onedrive\desktop\code  
> mkdir helloworld  
> cd helloworld
```

```
# macOS  
% cd ~/desktop/code  
% mkdir helloworld  
% cd helloworld
```

**Create a new virtual environment called .venv, activate it, and install Django with Pip as we did in the previous chapter.**

```
# Windows  
> python -m venv .venv  
> .venv\Scripts\Activate.ps1  
(.venv) > python -m pip install django~=4.0.0
```

# macOS

```
% python3 -m venv .venv  
% source .venv/bin/activate  
(.venv) % python3 -m pip install django~=4.0.0
```

Now we'll use the Django startproject command to make a new project called django\_project. Don't forget to include the period (.) at the end of the command so that it is installed in our current directory.

**(.venv) > django-admin startproject django\_project .**

Let's pause for a moment to examine the default project structure Django has provided for us. You examine this visually if you like by opening the new directory with your mouse on the Desktop. The .venv directory may not be initially visible because it is "hidden" but nonetheless still there.

```
| — django_project  
| | — __init__.py  
| | — asgi.py  
| | — settings.py  
| | — urls.py  
| | — wsgi.py  
| — manage.py  
— .venv/
```

The .venv directory was created with our virtual environment but Django has added a django\_project directory and a manage.py file. Within django\_project are five new files:

- \_\_init\_\_.py indicates that the files in the folder are part of a Python package. Without this file, we cannot import files from another directory which we will be doing a lot of in Django!
- asgi.py allows for an optional Asynchronous Server Gateway Interface to be run
- settings.py controls our Django project's overall settings
- urls.py tells Django which pages to build in response to a browser or URL request

- `wsgi.py` stands for Web Server Gateway Interface which helps Django serve our eventual web pages.

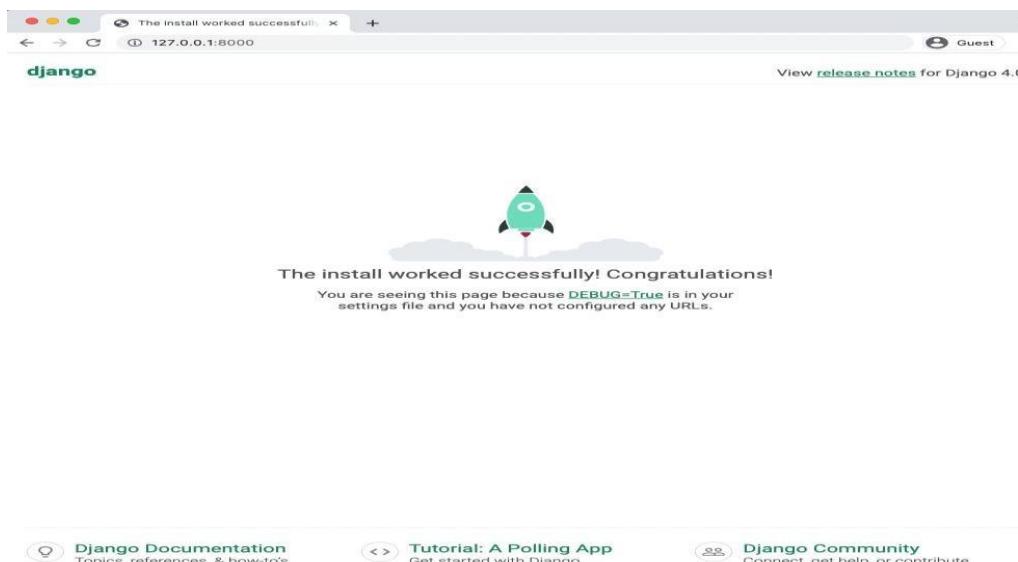

The `manage.py` file is not part of `django_project` but is used to execute various Django commands such as running the local web server or creating a new app.

Let's try out our new project by using Django's lightweight built-in web server for local development purposes. The command we'll use is `runserver` which is located in `manage.py`.

```
# Windows
(.venv) > python manage.py runserver

# macOS
(.venv) % python3 manage.py runserver
```

If you visit `http://127.0.0.1:8000/` you should see the following image:

## Hello, World

In Django, four separate files aligning with this MVT pattern are required to power one single dynamic (aka linked to a database) webpage:

`models.py`

`views.py`

`template.html` (any HTML file will do)

`urls.py`

However, to create a static webpage (not linked to a database) we can hardcode the data into a view so the model is not needed. That's what we'll do here to keep things simple. From Chapter 4 onwards we'll be using the model in all our projects.

### views.py

```
# pages/views.py

from django.http import HttpResponse

def homePageView(request):

    return HttpResponse("Hello, World!")
```

### urls.py

```
# pages/urls.py

from django.urls import path

from .views import homePageView

# django_project/urls.py

from django.contrib import admin

from django.urls import path, include # new
```

**We have all the code we need now. To confirm everything works as expected, restart our Django server:**

# Windows

```
(.venv) > python manage.py runserver
```

# Windows

```
(.venv) > python manage.py runserver
```

# macOS

```
(.venv) % python3 manage.py runserver
```

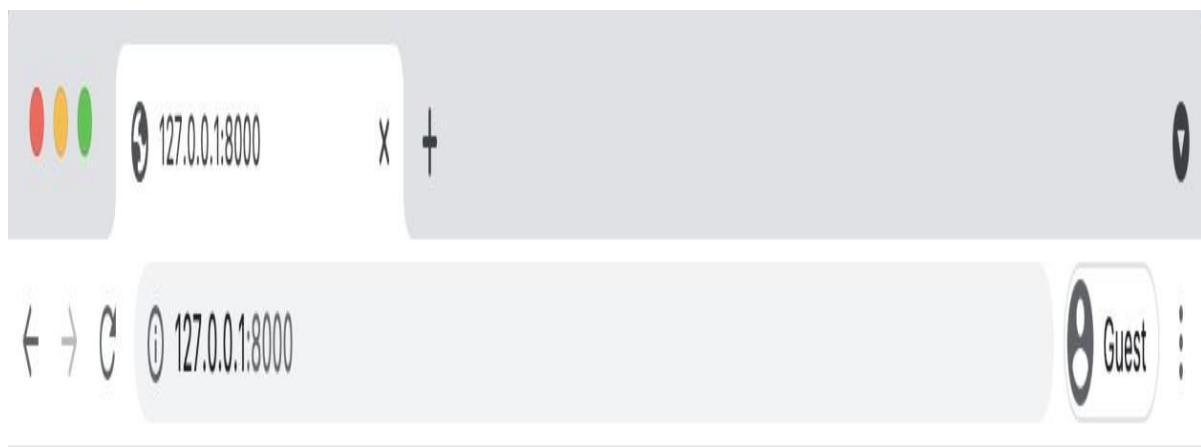

```
urlpatterns = [
```

```
    path("", homePageView, name="home"),
```

```
]
```

If you refresh the browser for <http://127.0.0.1:8000/> it now displays the text “Hello, World!”

**OUTPUT:**

Hello, World!
