

JAVA PROGRAMMING LABORATORY MANUAL

**B.TECH
(II YEAR – II SEM)
(2018-19)**

DEPARTMENT OF INFORMATION TECHNOLOGY

**MALLA REDDY COLLEGE OF ENGINEERING &
TECHNOLOGY**

(Autonomous Institution – UGC, Govt. of India)

Recognized under 2(f) and 12 (B) of UGC ACT 1956

(Affiliated to JNTUH, Hyderabad, Approved by AICTE - Accredited by NBA & NAAC – ‘A’ Grade - ISO 9001:2015 Certified)

Maisammaguda, Dhulapally (Post Via. Hakimpet), Secunderabad – 500100, Telangana State, India

DEPARTMENT OF INFORMATION TECHNOLOGY

VISION

- To improve the quality of technical education that provides efficient software engineers with an attitude to adapt challenging IT needs of local, national and international arena, through teaching and interaction with alumni and industry.

MISSION

- Department intends to meet the contemporary challenges in the field of IT and is playing a vital role in shaping the education of the 21st century by providing unique educational and research opportunities.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

PEO1 – ANALYTICAL SKILLS

To facilitate the graduates with the ability to visualize, gather information, articulate, analyze, solve complex problems, and make decisions. These are essential to address the challenges of complex and computation intensive problems increasing their productivity.

PEO2 – TECHNICAL SKILLS

To facilitate the graduates with the technical skills that prepare them for immediate employment and pursue certification providing a deeper understanding of the technology in advanced areas of computer science and related fields, thus encouraging to pursue higher education and research based on their interest.

PEO3 – SOFT SKILLS

To facilitate the graduates with the soft skills that include fulfilling the mission, setting goals, showing self-confidence by communicating effectively, having a positive attitude, get involved in team-work, being a leader, managing their career and their life.

PEO4 – PROFESSIONAL ETHICS

To facilitate the graduates with the knowledge of professional and ethical responsibilities by paying attention to grooming, being conservative with style, following dress codes, safety codes, and adapting themselves to technological advancements.

PROGRAM SPECIFIC OUTCOMES (PSOs)

After the completion of the course, B. Tech Information Technology, the graduates will have the following Program Specific Outcomes:

1. **Fundamentals and critical knowledge of the Computer System**:- Able to Understand the working principles of the computer System and its components , Apply the knowledge to build, asses, and analyze the software and hardware aspects of it .

2. **The comprehensive and Applicative knowledge of Software Development**: Comprehensive skills of Programming Languages, Software process models, methodologies, and able to plan, develop, test, analyze, and manage the software and hardware intensive systems in heterogeneous platforms individually or working in teams.

3. **Applications of Computing Domain & Research**: Able to use the professional, managerial, interdisciplinary skill set, and domain specific tools in development processes, identify the research gaps, and provide innovative solutions to them.

PROGRAM OUTCOMES (POs)

Engineering Graduates should possess the following:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design / development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multi disciplinary environments.
12. **Life- long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

MALLA REDDY COLLEGE OF ENGINEERING & TECHNOLOGY

Maisammaguda, Dhulapally Post, Via Hakimpet, Secunderabad – 500100

DEPARTMENT OF INFORMATION TECHNOLOGY

GENERAL LABORATORY INSTRUCTIONS

1. Students are advised to come to the laboratory at least 5 minutes before (to the starting time), those who come after 5 minutes will not be allowed into the lab.
2. Plan your task properly much before to the commencement, come prepared to the lab with the synopsis / program / experiment details.
3. Student should enter into the laboratory with:
 - a. Laboratory observation notes with all the details (Problem statement, Aim, Algorithm, Procedure, Program, Expected Output, etc.,) filled in for the lab session.
 - b. Laboratory Record updated up to the last session experiments and other utensils (if any) needed in the lab.
 - c. Proper Dress code and Identity card.
4. Sign in the laboratory login register, write the TIME-IN, and occupy the computer system allotted to you by the faculty.
5. Execute your task in the laboratory, and record the results / output in the lab observation note book, and get certified by the concerned faculty.
6. All the students should be polite and cooperative with the laboratory staff, must maintain the discipline and decency in the laboratory.
7. Computer labs are established with sophisticated and high end branded systems, which should be utilized properly.
8. Students / Faculty must keep their mobile phones in SWITCHED OFF mode during the lab sessions. Misuse of the equipment, misbehaviors with the staff and systems etc., will attract severe punishment.
9. Students must take the permission of the faculty in case of any urgency to go out; if anybody found loitering outside the lab / class without permission during working hours will be treated seriously and punished appropriately.
10. Students should LOG OFF/ SHUT DOWN the computer system before he/she leaves the lab after completing the task (experiment) in all aspects. He/she must ensure the system / seat is kept properly.

HEAD OF THE DEPARTMENT

PRINCIPAL

INDEX

S.No	Name of the program	Page no
1.	a) Write a java program that prompts the user for an integer and then printouts all prime numbers up to that integer	8
	b) Write a java program to multiply two given matrices.	9
2.	Write a java program that works as a simple calculator. Use a Grid Layout to arrange Buttons for digits and for the + - * %	11
3.	a) Write an applet program that displays a simple message	15
	b) Write a Java program compute factorial value using Applet	16
4.	Write a Java program for display the exception in a message dialogbox	17
5.	Write a Java program that implements a multi-thread application that has three threads	19
6.	Write a java program that connects to a database using JDBC	21
7.	Write a java program to simulate a traffic light	25
8.	Write a java program to create an abstract class named shape that contains an empty method named number of sides ()	27
9.	a) Write a java program to display the table using labels in Grid layout	29
	b) Write a java program for handling mouse and keyboard events	31
10.	Write a Java program loads phone no,name from a text file using hash table	33
11.	a) Implement the above program to load phone no, name from database instead of text file	34
	b) Write a java program for handling mouse events	35
12.	a) Write a Java program that takes tab separated data from a text file and inserts them into a database.	37
	b) Write a Java program that prints the meta-data of a given table	38

WEEK-1:**DATE:**

- a) Write a java program that prompts the user for an integer and then printouts all prime numbers up to that integer

Program:

```
import java.lang.*;  
class Prime  
{  
    public static void main(String arg[])  
    {  
        int n,c,i,j;  
        n=Integer.parseInt(arg[0]);  
        System.out.println("prime numbers are");  
        for(i=1;i<=n;i++)  
        {  
            c=0;  
            for(j=1;j<=i;j++)  
            {  
                if(i%j==0)  
                    c++;  
            }  
            if(c==2)  
                System.out.println(" "+i);  
        }  
    }  
}
```

Three test outputs:**Signature of the Faculty**

b) Write a java program to multiply two given matrices.

```
class matri
{
    public static void main(String args[])
    {
        // Accept the number of rows and columns at run time.
        int m=Integer.parseInt(args[0]);
        int n=Integer.parseInt(args[1]);
        // Initialize the arrays.
        int a[][]=new int[m][n]; int b[][]=new int[m][n]; int c[][]=new int[m][n]; int i=2;
        // Loop to accept the values into a matrix.
        for(int j=0;j<m;j++)
        {for(int k=0;k<n;k++)
        {
            a[j][k]=Integer.parseInt(args[i]);
            i++;
        }
        }
        // Loop to accept the values into b matrix.
        for(int j=0;j<m;j++)
        {
            for(int k=0;k<n;k++)
            {
                b[j][k]=Integer.parseInt(args[i]); i++;
            }
        }
        // Loop to multiply two matrices .
        for(int j=0;j<m;j++)
        {
            for(int k=0;k<n;k++)
            {
                c[j][k]=0;
                for(int l=0;l<m;l++)
                {
                    c[j][k]=c[j][k]+(a[j][l]*b[l][k]);
                }
            }
        }
        // Loop to display the result . for(int
        j=0;j<m;j++)
        {
            for(int k=0;k<n;k++)
            {
                System.out.print(c[j][k]);
            }
            System.out.println();
        }
    }
}
```

Three test outputs:

Signature of the Faculty

Week 2:

Write a java program that works as a simple calculator. Use a Grid Layout to arrange Buttons for digits and for the + - * % operations. Add a text field to display the result.

Program:

```
import javax.swing.*;
import javax.swing.JOptionPane; import java.awt.*;
import java.awt.event.*;

// Class that initialize the applet and create calculator.
public class Calculator extends JApplet
{
    public void init()
    {
        CalculatorPanel calc=new CalculatorPanel(); getContentPane().add(calc);
    }
}

// Class that creates the calculator panel .
class CalculatorPanel extends JPanel implements ActionListener
{
    // Creation of JButton.
    JButton n1,n2,n3,n4,n5,n6,n7,n8,n9,n0,plus,minus,mul,div,dot,equal;
    static JTextField result=new JTextField("0",45); static String lastCommand=null;
    // Create the JObjectPane.
    JOptionPane p=new JOptionPane(); double preRes=0,secVal=0,res;
    private static void assign(String no)
    {
        if((result.getText()).equals("0"))
            result.setText(no); else
                if(lastCommand=="=")
        {
            result.setText(no); lastCommand=null; }
        else
            result.setText(result.getText()+no);
    }

    // Creation of control panel of calculator and adding buttons using
    GridLayout. public CalculatorPanel()
    {
        setLayout(new GridLayout());
        result.setEditable(false);
        result.setSize(300,200);
        add(result);
```

```
JPanel panel=new JPanel();
panel.setLayout(new GridLayout(5,5));
n7=new JButton("7");
panel.add(n7);
n7.addActionListener(this);
n8=new JButton("8");
panel.add(n8);
n8.addActionListener(this);
n9=new JButton("9");
panel.add(n9);
n9.addActionListener(this);
div=new JButton("/");
panel.add(div);
div.addActionListener(this);
n4=new JButton("4");
panel.add(n4);
n4.addActionListener(this);
n5=new JButton("5");
panel.add(n5);
n5.addActionListener(this);
n6=new JButton("6");
panel.add(n6);
n6.addActionListener(this);
mul=new JButton("*");
panel.add(mul);
mul.addActionListener(this);
n1=new JButton("1");
panel.add(n1);
n1.addActionListener(this);
n2=new JButton("2");
panel.add(n2);
n2.addActionListener(this);
n3=new JButton("3");
panel.add(n3);
n3.addActionListener(this);
minus=new JButton("-");
panel.add(minus);
minus.addActionListener(this);
dot=new JButton(".");
panel.add(dot);
dot.addActionListener(this);
n0=new JButton("0");
panel.add(n0); n0.addActionListener(this);
equal=new JButton("=");
panel.add(equal);
```

```
equal.addActionListener(this);
plus=new JButton("+");
panel.add(plus);
plus.addActionListener(this);
add(panel);

}

// Implementing method in ActionListener.
public void actionPerformed(ActionEvent ae)
{
if(ae.getSource()==n1)
    assign("1");
else if(ae.getSource()==n2)
    assign("2");
else if(ae.getSource()==n3)
    assign("3");
else if(ae.getSource()==n4)
    assign("4");

    assign("7");
else if(ae.getSource()==n8)
    assign("8");
else if(ae.getSource()==n9)
    assign("9");
else if(ae.getSource()==n0)
    assign("0");
else if(ae.getSource()==dot)
{
if((result.getText()).indexOf("."))==-1)
result.setText(result.getText()+"."); } else if(ae.getSource()==minus)
{
preRes=Double.parseDouble(result.getText()); lastCommand="-";
result.setText("0");
}
else if(ae.getSource()==div)
{
preRes=Double.parseDouble(result.getText());
lastCommand="/";
result.setText("0");
}
```

```
else if(ae.getSource()==equal)
{
secVal=Double.parseDouble(result.getText());
if(lastCommand.equals("/"))
    res=preRes/secVal;
else if(lastCommand.equals("*"))
    res=preRes*secVal;
else if(lastCommand.equals("-"))
    res=preRes-secVal;
else if(lastCommand.equals("+"))
    res=preRes+secVal;
result.setText(" "+res); lastCommand="=";
}
else if(ae.getSource()==mul)
{
preRes=Double.parseDouble(result.getText());
lastCommand="*";
result.setText("0");
}
else if(ae.getSource()==plus)
{
preRes=Double.parseDouble(result.getText());
lastCommand="+";
result.setText("0");
}
}
```

Calculator.html:

```
<applet code="Calculator" width=200 height=300> </applet>
```

Three test outputs:

Signature of the Faculty

Week 3:

- a) Write an applet program that displays a simple message

Program:

Applet1.java:

```
// Import the packages to access the classes and methods in awt and applet  
classes. import java.awt.*; import java.applet.*;  
public class Applet1 extends Applet  
{  
// Paint method to display the message.  
public void paint(Graphics g)  
{  
g.drawString("HELLO      WORLD",20,20);  
}  
}
```

Applet1.html:

```
/* <applet code="Applet1" width=200 height=300></applet>*/
```

Three test outputs:

Signature of the Faculty

- b) Write a Java program compute factorial value using

```
Applet import java.awt.*;
import java.awt.event.*;
import java.applet.Applet;
public class FactorialApplet extends Applet implements ActionListener
{
    /*<applet code="FactorialApplet" height=300 width=300>
    </applet>*/ Label
    l1,l2; TextField
    t1,t2; Button b1;
    public void init()
    {
        setLayout(new
        FlowLayout(FlowLayout.LEFT)); l1=new
        Label("Enter the value:");
        add(l1);
        t1=new TextField(10);
        add(t1);
        l2=new Label("Factorial value is:");
        add(l2);
        t2=new TextField(10);
        add(t2);
        b1=new Button("Compute");
        add(b1);
        b1.addActionListener(this);
    }
    public void actionPerformed(ActionEvent e)
    {
        if((e.getSource())==b1)
        {
            int value=Integer.parseInt(t1.getText());
            int fact=factorial(value);
            t2.setText(String.valueOf(fact));
        }
    }
    int factorial(int n)
    {
        if(n==0)
            return 1;
        else
            return n*factorial(n-1);
    }
}
```

Three test outputs:

Signature of the Faculty

Week 4:

Write a Java program for display the exception in a message dialogbox

```
import java.awt.*;
import javax.swing.*;
import java.awt.event.*;
public class NumOperations extends JApplet implements ActionListener
{
    /*<applet code="NumOperations" width=300 height=300></applet>*
    JLabel l1,l2,l3;
    JTextField t1,t2,t3;
    JButton b1;
    public void init()
    {
        Container contentPane=getContentPane();
        contentPane.setLayout(new FlowLayout());
        l1=new JLabel("Enter num1:");
        contentPane.add(l1);
        t1=new JTextField(15);
        contentPane.add(t1);
        l2=new JLabel("Enter num2:");
        contentPane.add(l2);
        t2=new JTextField(15);
        contentPane.add(t2);
        l3=new JLabel("The Result");
        contentPane.add(l3);
        t3=new JTextField(15);
        contentPane.add(t3);
        b1=new JButton("Divide");
        contentPane.add(b1);
        b1.addActionListener(this);
    }
    public void actionPerformed(ActionEvent e)
    {
        if(e.getSource()==b1)
        {
            try
            {
                int a=Integer.parseInt(t1.getText()); int
                b=Integer.parseInt(t2.getText());
                float c=Float.valueOf(a/b);
                t3.setText(String.valueOf(c));
            }
            catch(NumberFormatException e1)
            {
                JOptionPane.showMessageDialog(this,"Not a valid number");
            }
        }
    }
}
```

```
        catch(ArithmetricException e2)
        {
            JOptionPane.showMessageDialog(this,e2.getMessage());
        }
    }
}
```

Three test outputs:

Signature of the Faculty

Week 5:

Write a Java program that implements a multi-thread application that has three threads

Program:

```
// Class that create the thread.  
class NewThread implements Runnable  
{ String name; Thread t;  
// NewThread constructor that takes the thread name as parameter.  
NewThread(String threadname)  
{  
    name=threadname; t=new Thread(this,name);  
    System.out.println("new thread"+t); t.start();  
}  
  
// Method to run the thread.  
public void run()  
{  
// The code that may generate the exception. try  
{  
// Loop to display the thread name and the  
value. for(int i=0;i<5;i++)  
{  
    System.out.println(name+" "+i); Thread.sleep(1000);  
}  
}  
}  
// The block that catches the exception.  
catch(Exception e)  
{  
    System.out.println("child interrupted");  
  
}  
System.out.println(name+" "+"exiting");  
}  
}  
  
// Class that takes the thread name and run the main  
thread. class multithread  
{  
public static void main(String args[ ])  
{ // Creating child threads.  
new NewThread("one"); new  
NewThread("two"); new NewThread("three");  
// Block that may generate the exception.  
try  
{  
for(int i=5;i>0;i--)
```

```
{  
    System.out.println("main thread"+i);  
    Thread.sleep(10000);  
}  
}  
  
// Block that catch the exception.  
catch(Exception e)  
{  
    System.out.println("main thread interrupted");  
}  
System.out.println("main thread exiting");  
}  
}
```

Three test outputs:

Signature of the Faculty

Week 6:

- a) Write a java program that connects to a database using JDBC
Program:

```
import java.sql.Connection;
import java.sql.DriverManager;
public class PostgreSQLJDBC
{
    public static void main(String args[])
    {
        Connection c = null;
        try {
            Class.forName("org.postgresql.Driver");
            c = DriverManager.getConnection("jdbc:postgresql://localhost:5432/testdb",
                "postgres", "123");
        } catch (Exception e) {
            e.printStackTrace();
            System.err.println(e.getClass().getName()+": "+e.getMessage());
            System.exit(0);
        }
        System.out.println("Opened database successfully");
    }
}
```

Three test outputs:**Signature of the Faculty**

B) Write a java program to connect to a database using JDBC and insert values into it

```
import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.Statement;
public class PostgreSQLJDBC
{
    public static void main(String args[])
    {
        Connection c = null;
        Statement stmt = null;
        try {
            Class.forName("org.postgresql.Driver")
            ; c = DriverManager
                .getConnection("jdbc:postgresql://localhost:5432/testdb",
                "manisha", "123");
            c.setAutoCommit(false);
            System.out.println("Opened database
successfully"); stmt = c.createStatement();
String sql = "INSERT INTO COMPANY (ID,NAME,AGE,ADDRESS,SALARY) "
        + "VALUES (1, 'Paul', 32, 'California', 20000.00 );";
stmt.executeUpdate(sql);
sql = "INSERT INTO COMPANY (ID,NAME,AGE,ADDRESS,SALARY) "
        + "VALUES (2, 'Allen', 25, 'Texas', 15000.00 );";
stmt.executeUpdate(sql);
sql = "INSERT INTO COMPANY (ID,NAME,AGE,ADDRESS,SALARY) "
        + "VALUES (3, 'Teddy', 23, 'Norway', 20000.00 );";
stmt.executeUpdate(sql);
sql = "INSERT INTO COMPANY (ID,NAME,AGE,ADDRESS,SALARY) "
        + "VALUES (4, 'Mark', 25, 'Rich-Mond ', 65000.00 );";
stmt.executeUpdate(sql);
stmt.close();
c.commit();
c.close();
} catch (Exception e) {
    System.err.println( e.getClass().getName()+" : " + e.getMessage()
); System.exit(0);
}
System.out.println("Records created successfully");
}
}
```

Three test outputs:

Signature of the Faculty

C) : Write a java program to connect to a database using JDBC and delete values from it

```
import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.ResultSet;
import java.sql.Statement;
```

```
public class PostgreSQLJDBC6 {
    public static void main( String args[]
    )
    {
        Connection c = null;
        Statement stmt = null;
        try {
            Class.forName("org.postgresql.Driver")
            ; c = DriverManager
                .getConnection("jdbc:postgresql://localhost:5432/testdb",
                "manisha", "123");
            c.setAutoCommit(false);
            System.out.println("Opened database
successfully");

            stmt = c.createStatement();
            String sql = "DELETE from COMPANY where ID=2;";
            stmt.executeUpdate(sql);
            c.commit();

            ResultSet rs = stmt.executeQuery( "SELECT * FROM COMPANY;" );
            while ( rs.next() )
            {
                int id = rs.getInt("id");
                String name = rs.getString("name");
                int age = rs.getInt("age");
                String address = rs.getString("address");
                float salary = rs.getFloat("salary");
                System.out.println( "ID = " + id );
                System.out.println( "NAME = " + name
                ); System.out.println( "AGE = " + age );
                System.out.println( "ADDRESS = " + address );
                System.out.println( "SALARY = " + salary );
                System.out.println();
            }
            rs.close();
            stmt.close();
            c.close();
        } catch ( Exception e ) {
```

```
        System.err.println( e.getClass().getName()+": "+ e.getMessage()
        ); System.exit(0);
    }
    System.out.println("Operation done successfully");
}
}
```

Week 7:

Write a java program to simulate a traffic light

Program:

```
import javax.swing.*;
import java.awt.*;
import java.awt.event.*;
// Class that allows user to select the traffic lights.
public class Trafficlight extends JFrame implements ItemListener
{
JRadioButton redbut,yellowbut,greenbut;
public Trafficlight()
{
Container c = getContentPane();
c.setLayout(new FlowLayout());
// Create the button group.
ButtonGroup group= new
ButtonGroup(); redbut = new
JRadioButton("Red"); yellowbut = new
JRadioButton("Yellow"); greenbut = new
JRadioButton("Green");
group.add(redbut);
group.add(yellowbut);
group.add(greenbut);
// Add the buttons to the container.
c.add(redbut);
c.add(yellowbut);
c.add(greenbut);
// Add listeners to perform action
redbut.addItemListener(this);
yellowbut.addItemListener(this);
greenbut.addItemListener(this);
addWindowListener(new WindowAdapter()
{
// Implement methods in Window Event class.
public void windowClosing(WindowEvent e)
{
System.exit(0);
}
});
setTitle("Traffic Light ");
setSize(250,200);
setVisible(true);
}
// Implement methods in Item Event class.
public void itemStateChanged(ItemEvent e)
```

```
{  
String name= " ",color=" ";  
if(redbut.isSelected() )  
    name = "Red";  
else if(yellowbut.isSelected() )  
    name = "Yellow";  
else if(greenbut.isSelected() )  
    name = "Green";  
  
JOptionPane.showMessageDialog(null,"The "+name+" light is simulated, "MessgeBox",  
JOptionPane.INFORMATION_MESSAGE);  
}  
public static void main(String args[] )  
{  
new trafficlight();  
}  
}
```

Three test outputs:

Signature of the Faculty

Week 8:

Write a java program to create an abstract class named shape that contains an empty method named number of sides (). Provide three classes named trapezoid, triangle and Hexagon such that each one of the classes extends the class shape. Each one of the class contains only the method number of sides () that shows the number of sides in the given geometrical figures.

Program:

```
// Abstract class that contains abstract method.  
abstract class Shape  
{  
    abstract void numberOfSides();  
}  
  
// Classes that illustrates the abstract method.  
class Trapezoid  
{  
    void  numberOfSides()  
    {  
        System.out.println("The no. of side's in trapezoidal are6");  
    }  
}  
  
class  Triangle  
{  
    void  numberOfSides()  
    {  
        System.out.println("The no. of side's in triangle are:3 ");  
    }  
}  
  
class  Hexagon  
{  
    void  numberOfSides()  
    {  
        System.out.println("The no. of side's in hexagon are:6 ");  
    }  
}  
  
// Class that create objects and call the method.  
class ShapeDemo  
{  
    public static void main(String args[])  
    {  
        Trapezoid obj1 = new Trapezoid();  
        Triangle obj2 = new Triangle();  
        Hexagon obj3 = new Hexagon();  
        obj1.numberOfSides();  
        obj2.numberOfSides();  
        obj3.numberOfSides(); }  
}
```

Three test outputs:

Signature of the Faculty

Week 9:

- a) Write a java program to display the table using labels in Grid layout
- ```
import java.awt.*;
import java.awt.event.*;
import javax.swing.*;
import java.util.*;
import java.io.*;
public class TableDemo extends JFrame
{
 int i=0;
 int j=0;
 Object TabData[][]=new Object[5][2];
 JTable mytable;
 FileInputStream fr;
 DataInputStream in;
 public TableDemo()
 {
 String str=" ";
 Container contentpane=getContentPane();
 contentpane.setLayout(new
 BorderLayout()); final String[]
 Column={"",""};
 try
 {
 FileInputStream fr=new FileInputStream("table.txt");
 DataInputStream in=new DataInputStream(fr);
 if((str=in.readLine())!=null)
 {
 StringTokenizer s=new StringTokenizer(str,"");
 while(s.hasMoreTokens())
 {
 for(int k=0;k<2;k++)
 {
 Column[k]=s.nextToken();
 }
 }
 }
 while((str=in.readLine())!=null)
 {
 StringTokenizer s=new StringTokenizer(str,"");
 while(s.hasMoreTokens())
 {
 for(j=0;j<2;j++)
 {
 TabData[i][j]=s.nextToken();
 }
 }
 }
 }
 }
}
```

```
 } i++;
 }
}
}catch(Exception e)
{
 System.out.println(e.getMessage());
}

mytable=new JTable(TabData,Column);
int v=ScrollPaneConstants.VERTICAL_SCROLLBAR_AS_NEEDED;
int h=ScrollPaneConstants.HORIZONTAL_SCROLLBAR_AS_NEEDED;
JScrollPane scroll=new JScrollPane(mytable,v,h);
contentpane.add(scroll,BorderLayout.CENTER);
}

public static void main(String args[])
{
 TableDemo t=new TableDemo();
 t.setSize(300,300);
 t.setVisible(true);
 t.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
}
}
```

B) Write a java program for handling mouse events

```
Program: mouseevent.java
import java.awt.*;
import java.awt.event.*;
import java.applet.*;

// Class that handles mouse events.
public class mouseevent extends Applet implements MouseListener,MouseMotionListener
{
 String msg="";
 int mousex=0,mousey=0;
 // Method to initialize the applet.
 public void init()
 {
 addMouseListener(this);
 addMouseMotionListener(this);
 }

 // Method to handle mouse clicked event .

 public void mouseClicked(MouseEvent me)
 {
 mousex=0;
 mousey=10; msg="mouse clicked"; repaint();
 }

 // Method to handle mouse entered event . public void mouseEntered(MouseEvent me)
 {
 mousex=0;
 mousey=10; msg="mouse Entered"; repaint();
 }

 // Method to handle mouse exited event .
 public void mouseExited(MouseEvent me)
 {
 mousex=0; mousey=10; msg="mouse exited";
 repaint();
 }

 // Method to handle mouse pressed event . public
 void mousePressed(MouseEvent me)
 {
 mousex=me.getX(); mousey=me.getY();
 msg="down";
 repaint();
 }

 // Method to handle mouse released event .
 public void mouseReleased(MouseEvent me)
 {
```

```
mousex=me.getX();
mousey=me.getY();
msg="Up";
repaint();
}
// Method to handle mouse dragged event .
public void mouseDragged(MouseEvent me)
{
mousex=me.getX();
mousey=me.getY();
msg="";
showStatus("Dragged mouse at"+mousex+"<"+mousey); repaint();
}
// Method to handle mouse moved event . public
void mouseMoved(MouseEvent me)
{
showStatus("Moving mouseat"+me.getX()+" "+me.getY());
}

// Method to display the message .
public void paint(Graphics g)
{
g.drawString(msg,mousex,mousey);
}
```

*mouseevent.html:*

```
/* <applet code="mouseevent" width=200 height=200> </applet>
*/
```

**Three test outputs:**

**Signature of the Faculty**

**Week 10:**

Write a Java program loads phone no, name from a text file using hash table

Program:

```
// Demonstrate a Hashtable
import java.util.*;
class HTDemo {
 public static void main(String args[]) {
 Hashtable balance = new Hashtable();
 Enumeration names;
 String str;
 double bal;
 balance.put("John Doe", new Double(3434.34));
 balance.put("Tom Smith", new Double(123.22));
 balance.put("Jane Baker", new Double(1378.00));
 balance.put("Todd Hall", new Double(99.22));
 balance.put("Ralph Smith", new Double(-19.08));
 // Show all balances in hash table.
 names = balance.keys();
 while(names.hasMoreElements()) {
 str = (String) names.nextElement();
 System.out.println(str + ": " +
 balance.get(str));
 }
 System.out.println();
 // Deposit 1,000 into John Doe's account
 bal = ((Double)balance.get("John
Doe")).doubleValue(); balance.put("John Doe", new
Double(bal+1000)); System.out.println("John Doe's
new balance: " + balance.get("John Doe"));
 }
}
```

**Three test outputs:**

**Signature of the Faculty**

**Week 11:**

- a) Implement the above program to load phone no, name from database instead of text file

```
import java.sql.*;
import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.Statement;
public class PostgreSQLJDBC
{
 public static void main(String args[])
 {
 Connection c = null;
 Statement stmt = null;
 try {
 Class.forName("org.postgresql.Driver")
 ; c = DriverManager
 .getConnection("jdbc:postgresql://localhost:5432/testdb",
 "manisha", "123");
 System.out.println("Opened database successfully");

 stmt = c.createStatement();
 String sql = "CREATE TABLE COMPANY " +
 "(ID INT PRIMARY KEY NOT NULL," +
 " NAME TEXT NOT NULL, " +
 " AGE INT NOT NULL, " +
 " ADDRESS CHAR(50), " +
 " SALARY REAL)";
 stmt.executeUpdate(sql);
 stmt.close();
 c.close();
 } catch (Exception e) {
 System.err.println(e.getClass().getName(): "+ e.getMessage()
); System.exit(0);
 }
 System.out.println("Table created successfully");
 }
}
```

**Three test outputs:****Signature of the Faculty**

- b) Write a java program for handling mouse events

```
Program: mouseevent.java
import java.awt.*;
import java.awt.event.*;
import java.applet.*;

// Class that handles mouse events.

public class mouseevent extends Applet implements MouseListener,MouseMotionListener
{
 String msg="";
 int mousex=0,mousey=0;
 // Method to initialize the applet.
 public void init()
 {
 addMouseListener(this);
 addMouseMotionListener(this);
 }

 // Method to handle mouse clicked event .

 public void mouseClicked(MouseEvent me)
 {
 mousex=0;
 mousey=10; msg="mouse clicked"; repaint();
 }

 // Method to handle mouse entered event . public void mouseEntered(MouseEvent me)
 {
 mousex=0;
 mousey=10; msg="mouse Entered"; repaint();
 }

 // Method to handle mouse exited event .
 public void mouseExited(MouseEvent me)
 {
 mousex=0; mousey=10; msg="mouse exited";
 repaint();
 }

 // Method to handle mouse pressed event . public
 void mousePressed(MouseEvent me)
 {
 mousex=me.getX(); mousey=me.getY();
 msg="down";
 repaint();
 }

 // Method to handle mouse released event .
 public void mouseReleased(MouseEvent me)
 {
```

```
mousex=me.getX();
mousey=me.getY();
msg="Up";
repaint();
}

// Method to handle mouse dragged event .
public void mouseDragged(MouseEvent me)
{
mousex=me.getX();
mousey=me.getY();
msg="";
showStatus("Dragged mouse at"+mousex+"<"+mousey); repaint();
}

// Method to handle mouse moved event . public
void mouseMoved(MouseEvent me)
{
showStatus("Moving mouseat"+me.getX()+"+"+me.getY());
}

// Method to display the message .
public void paint(Graphics g)
{
g.drawString(msg,mousex,mousey);
}
```

*mouseevent.html:*

```
/* <applet code="mouseevent" width=200 height=200> </applet>
*/
```

**Three test outputs:**

Signature of the Faculty

**Week 12:**

- a) Write a Java program that takes tab separated data from a text file and inserts them into a database.

Program:

```
import java.io.BufferedReader;
import java.io.FileReader;
public class TabSeparatedFileReader {
 public static void main(String args[]) throws
 Exception {
 /**
 * Source file to read data from.
 */
 String dataFileName = "C:/temp/myTabSeparatedFile.txt";
 /**
 * Creating a buffered reader to read the file
 */
 BufferedReader bReader = new
 BufferedReader(new
 FileReader(dataFileName));
 String line;
 /**
 * Looping the read block until all lines in the file are read.
 */
 while ((line = bReader.readLine()) != null) {
 /**
 * Splitting the content of tabbed separated line
 */
 String datavalue[] =
 line.split("\t"); String value1 =
 datavalue[0]; String value2 =
 datavalue[1];
 int value3 = Integer.parseInt(datavalue[2]);
 double value4 = Double.parseDouble(datavalue[3]);
 /* Printing the value read from file to the console*/
 System.out.println(value1 + "\t" + value2 + "\t" + value3 + "\t"
 + value4);
 }
 bReader.close();
}
```

**Three test outputs:**

**Signature of the Faculty**

- b) Write a Java program that prints the meta-data of a given table

Program:

```
import java.sql.Connection;
import java.sql.DatabaseMetaData;
import java.sql.DriverManager;
import java.sql.SQLException;
public class JDBCInformation {
 static String userid="scott", password = "tiger";
 static String url = "jdbc:odbc:Bob";
 static Connection con = null;
 public static void main(String[] args) throws
 Exception { Connection con =
 getOracleJDBCCConnection(); if(con!= null){
 System.out.println("Got Connection.");
 DatabaseMetaData meta =
 con.getMetaData();
 System.out.println("Driver Name : "+meta.getDriverName());
 System.out.println("Driver Version : "+meta.getDriverVersion());
 }else{
 System.out.println("Could not Get Connection");
 }
 }
 public static Connection getOracleJDBCCConnection(){
 try {
 Class.forName("sun.jdbc.odbc.JdbcOdbcDriver");
 } catch(java.lang.ClassNotFoundException e) {
 System.err.print("ClassNotFoundException: ");
 System.err.println(e.getMessage());
 }
 try {
 con = DriverManager.getConnection(url, userid, password);
 } catch(SQLException ex) {
 System.err.println("SQLException: " + ex.getMessage());
 }
 return con;
 }
}
```
